

PAVEMENT MANAGEMENT PROGRAM

FAQ (Frequently Asked Questions)

1. When will I be informed of work on my street?

If your street has been selected to receive treatment, then:

- a. The contractor will post a notice on your door two weeks prior to starting any work. The notice will include the expected start date of the work and duration of the work. The contractor will re-notify on your door 2 days (48 hours) prior to starting any work.
- b. The contractor will post “No Parking” signs 3 days (72 hours) prior to starting work. The signs will include date and time of parking restrictions.

2. What type of construction work will take place in front of my home?

- a. Work can take place on your frontage. Some examples include tree trimming, concrete repairs such as curb and gutter, sidewalk, driveway aprons, curb ramp.
- b. Pavement work will include asphalt grinding, asphalt repairs, oil spray, asphalt placement, utility adjustment of manholes or valve covers, striping and legend application, etc.
- c. If your road has been selected for a cape seal, please note it is normal to see loose rock chips on the road. This is a standard part of the process. The chip seal needs a week to cure, during which loose chips will settle. Following this, a slurry seal will be applied on top. Once the slurry seal has cured, the loose rock chips will be embedded in the surface, with no loose chips on the street.

3. How does the work impact me?

- a. We may temporarily close your sidewalk, temporary restrictions to your driveway and parking on the street might be restricted.
- b. There is noise, dust, odors, oil, and traffic delays.
- c. Depending on the type of treatment, you can expect uneven surface or small chips for 5 business days.

4. Who can I contact for more information or to report issues during construction.

- a. For questions or to report issues, please call Engineering at (408) 399-5771, or email us at ppw@losgatosca.gov
