

## PROJECT DESCRIPTION

### Garage Addition

A 639.3 SF garage addition, connected to the main house with a covered breezeway, is proposed on the north-east corner of the main house. In order to tie in architecturally to the style of the main house, the roof pitch is increased to match the main house. The proposed roof height of the garage is 19'-8". All materials used on the exterior of the garage and breezeway will match the main house. Garage doors will be paneled sectional type (Garage Doors Inc.- Model T) painted to match the other windows and doors.

Access to the garage will be by a driveway extension using impermeable concrete pavers to match the pavers installed at the front of the main house.
