San Mateo, CA 94403
Contact: Dean D. Peterson, Director
(650) 372-6200

Project Characteristics

The proposed Single Use Bag Ban Ordinance (“Proposed Ordinance”) would regulate the use of paper and plastic single-use carryout bags within the participating municipalities. Participating municipalities include the County of San Mateo and 24 cities in San Mateo and Santa Clara Counties (see full list of participating municipalities in Section 2.0, *Project Description*). For the purposes of this Program EIR, the geographical limits of unincorporated San Mateo County and all of the participating municipalities listed above shall be known as the “Study Area”. The Proposed Ordinance would apply to all retail establishments located within the limits of the Study Area, including those selling clothing, food, and personal items directly to the customer. It would not apply to restaurants. The Proposed Ordinance would (1) prohibit the free distribution of single-use carryout paper and plastic bags and (2) require retail establishments to charge customers for recycled paper bags and reusable bags at the point of sale. The minimum charge would be ten cents (\$0.10) per paper bag until December 31, 2014 and twenty-five cents (\$0.25) per paper bag on or after January 1, 2015.

The intent of the Proposed Ordinance is to reduce the environmental impacts related to the use of single-use carryout bags, and to promote a shift toward the use of reusable bags. It is anticipated that by prohibiting single-use plastic carryout bags and requiring a mandatory charge for each paper bag distributed by retailers, the Proposed Ordinance would provide a disincentive to customers to request paper bags when shopping at regulated stores and promote a shift to the use of reusable bags by retail customers, while reducing the number of single-use plastic and paper bags within the Study Area.

Single-use plastic carryout bags are defined as bags made from petroleum or bio-based plastic that are less than 2.25 mils thick (0.00225 inches). The Proposed Ordinance would prohibit retailers from distributing both petroleum and bio-based single-use carryout plastic bags at the point of sale. The Proposed Ordinance would not prohibit the distribution of plastic “product bags”, as defined, which includes bags without handles provided to a customer (1) to transport prepared food, produce, bulk food or meat from a department within a store to the point of sale; (2) to hold prescription medication dispensed from a pharmacy; or (3) to segregate food or

merchandise that could damage or contaminate other food or merchandise when placed together in a reusable bag or recycled paper bag. The Proposed Ordinance would not apply to restaurants and other food service providers, allowing them to provide plastic bags to customers for prepared take-out food intended for consumption off of the food provider's premises.

As noted above, the Proposed Ordinance would require regulated retailers to impose a mandatory charge for each paper carryout bag provided. Retail establishments would be required to keep a complete and accurate record (including documents of the purchase and sale of any recycled paper bag or reusable bag) for a minimum period of three years from the date of purchase and sale. The record must be available for inspection during regular business hours by any County employee authorized to enforce this part at no cost to the County. The charge would be retained by the affected stores to compensate the stores for increased costs related to compliance with the Proposed Ordinance, actual costs associated with providing recyclable paper carryout bags or reusable bags, and costs associated with a store's educational materials or education campaign encouraging the use of reusable bags.

PROJECT OBJECTIVES

The County of San Mateo's and the participating cities' objectives for the Proposed Ordinance include:

- Reducing the amount of single-use plastic bags in trash loads (e.g., landfills), in conformance with the trash load reduction requirements of the NPDES Municipal Regional Permit
- Reducing the environmental impacts related to single-use plastic carryout bags, such as impacts to biological resources (including marine environments), water quality and utilities (solid waste)
- Deterring the use of paper bags by customers in the respective jurisdictions
- Promoting a shift toward the use of reusable carryout bags by retail customers in the respective jurisdictions
- Avoiding litter and the associated adverse impacts to stormwater systems, aesthetics and the marine environment (San Francisco Bay and the Pacific Ocean)

ALTERNATIVES

As required by CEQA, the EIR examines a range of alternatives to the proposed project that feasibly attain most of the basic project objectives. These alternatives are described and evaluated in Section 6.0, *Alternatives*. Studied alternatives include:

- ***Alternative 1: No Project*** - The no project alternative assumes that the Single Use Bag Ban Ordinance would not occur. The existing retail establishments would continue to provide single-use bags free of charge to the customers.

- ***Alternative 2: Ban on Single-Use Plastic Bags at all Retail Establishments -*** *This alternative would prohibit all retail establishments in the Study Area from providing single-use plastic bags to customers at the point of sale, including restaurants and other retailers not covered by the Proposed Ordinance.*
- ***Alternative 3: Mandatory Charge of \$0.25 for Paper Bags -*** *This alternative would continue to prohibit retail establishments (except restaurants) in the Study Area from providing single-use plastic bags to customers at the point of sale, but would increase the mandatory charge for single-use paper bags from \$0.10 to \$0.25.*
- ***Alternative 4: Ban on Both Single-use Plastic and Paper Carryout Bags -*** *This alternative would prohibit all retail establishments (except restaurants) in the Study Area from providing single-use plastic and paper carryout bags to customers at the point of sale.*

SUMMARY OF SIGNIFICANT IMPACTS AND MITIGATION MEASURES

Table ES-1 includes a brief description of the environmental issues relative to the Proposed Ordinance, the identified significant environmental impacts, proposed mitigation measures, and residual impacts. Impacts are categorized by classes. Class I impacts are defined as significant, unavoidable adverse impacts which require a statement of overriding considerations to be issued pursuant to the *CEQA Guidelines* §15093 if the project is approved. Class II impacts are significant adverse impacts that can be feasibly mitigated to less than significant levels and which require findings to be made under Section 15091 of the *CEQA Guidelines*. Class III impacts are considered less than significant impacts, and Class IV impacts are beneficial impacts.

Table ES-1 Summary of Significant Environmental Impacts, Mitigation Measures, and Residual Impacts		
Impact	Mitigation Measures	Significance After Mitigation
AIR QUALITY		
Impact AQ-1 With a shift toward reusable bags, the Proposed Ordinance is expected to substantially reduce the number of single-use carryout bags, thereby reducing the total number of bags manufactured and the overall air pollutant emissions associated with bag manufacture, transportation and use. Therefore, air quality impacts related to alteration of processing activities would be Class IV, <i>beneficial</i> .	Mitigation is not required.	The impact would be beneficial without mitigation.
Impact AQ-2 With an expected increase in the use of recyclable paper bags, the Proposed Ordinance would generate air pollutant emissions associated with an incremental increase in truck trips to deliver recycled paper and reusable carryout bags to local retailers. However, emissions would not exceed BAAQMD operational significance thresholds. Therefore, operational air quality impacts would be Class III, <i>less than significant</i> .	Mitigation is not required.	Impacts would be less than significant without mitigation.
BIOLOGICAL RESOURCES		
Impact BIO-1 Although the Proposed Ordinance would incrementally increase the number of recycled paper and reusable bags within the Study Area, the reduction in the amount of single-use plastic bags would be expected to reduce the overall amount of litter entering the coastal and bay habitat, thus reducing litter-related impacts to sensitive wildlife species and sensitive habitats. This is a Class IV, <i>beneficial</i> , effect.	Mitigation is not required.	The impact would be beneficial without mitigation.
GREENHOUSE GAS EMISSIONS		
Impact GHG-1 The Proposed Ordinance would increase the number of recyclable paper bags used in the Study Area. Implementation of the Proposed Ordinance would incrementally increase GHG emissions compared to existing conditions. However, emissions would not exceed thresholds of significance. Impacts	Mitigation is not required.	The impact would be less than significant without mitigation.

Table ES-1 Summary of Significant Environmental Impacts, Mitigation Measures, and Residual Impacts		
Impact	Mitigation Measures	Significance After Mitigation
would be Class III, <i>less than significant</i> .		
Impact GHG-2 The Proposed Ordinance would not conflict with any applicable plan, policy or regulation of an agency adopted for the purpose of reducing the emissions of GHGs. Impacts would be Class III, <i>less than significant</i> .	Mitigation is not required.	The impact would be less than significant without mitigation.
HYDROLOGY/WATER QUALITY		
Impact HWQ-1 The Proposed Ordinance would incrementally increase the number of recycled paper and reusable bags used in the Study Area, but the reduction in the overall number of single-use plastic bags used in the Study Area would reduce the amount of litter and waste entering storm drains. This would improve local surface water quality, a Class IV, <i>beneficial</i> , effect.	Mitigation is not required.	The impact would be beneficial without mitigation.
Impact HWQ-2 A shift toward reusable bags and potential increase in the use of recyclable paper bags could potentially increase the use of chemicals associated with their production, which could degrade water quality in some instances and locations. However, bag manufacturers would be required to adhere to existing regulations, including NPDES Permit requirements, AB 258, and the California Health and Safety Code. Therefore, impacts to water quality from altering bag processing activities would be Class III, <i>less than significant</i> .	Mitigation is not required.	Impacts would be less than significant without mitigation.
UTILITIES AND SERVICE SYSTEMS		
Impact U-1 The increase of reusable bags within the Study Area as a result of the Proposed Ordinance would incrementally increase water demand due to washing of reusable bags by a negligible amount. However, sufficient water supplies are available to meet the demand created by reusable bags. Therefore, water supply impacts would be Class III, <i>less than significant</i> .	Mitigation is not required.	Impacts would be less than significant without mitigation.
Impact U-2 Water use associated with washing reusable bags would increase negligibly in the Study Area resulting in an increase in wastewater	Mitigation is not required.	Impacts would be less than significant without mitigation.

Table ES-1
Summary of Significant Environmental Impacts,
Mitigation Measures, and Residual Impacts

Impact	Mitigation Measures	Significance After Mitigation
generation. Projected wastewater flows would remain within the capacity of the wastewater collection and treatment system of the Study Area, and would not exceed applicable wastewater treatment requirements of the RWQCB. Impacts would be Class III, <i>less than significant</i> .		
Impact U-3 The Proposed Ordinance would alter the solid waste generation associated with increased paper bag use in the Study Area. However, projected future solid waste generation would remain within the capacity of regional landfills. Impacts would therefore be Class III, <i>less than significant</i> .	Mitigation is not required.	Impacts would be less than significant without mitigation.

1.0 INTRODUCTION

This document is a Program Environmental Impact Report (Program EIR) for the proposed Single Use Bag Ban Ordinance (the Proposed Ordinance). The Proposed Ordinance would prohibit retail establishments (excluding restaurants) in the unincorporated San Mateo County and in each of the participating municipalities from distributing single use bags at no charge. It would also create a mandatory 10 cent (\$0.10) charge for each recycled paper and reusable bag distributed by these stores at the point of sale. The minimum charge would be ten cents (\$0.10) until December 31, 2014 and twenty-five cents (\$0.25) on or after January 1, 2015. The intent of the ordinance is to reduce the environmental impacts related to the use of single-use bags, and to promote a shift toward the use of reusable bags.

The Single Use Bag Ban Ordinance would apply to any commercial establishment that sells perishable or nonperishable goods, including, but not limited to, clothing, food, and personal items directly to the customer; and is located within or doing business within the geographical limits of unincorporated San Mateo County or any of the following participating municipalities:

San Mateo County

- Belmont
- Brisbane
- Burlingame
- Colma
- Daly City
- East Palo Alto
- Foster City
- Half Moon Bay
- Menlo Park
- Millbrae
- Pacifica
- Portola Valley
- Redwood City
- San Bruno
- San Carlos
- San Mateo
- South San Francisco
- Woodside

Santa Clara County

- Milpitas
- Cupertino
- Los Gatos
- Los Altos
- Campbell
- Mountain View

For the purposes of this Program EIR, the geographical limits of unincorporated San Mateo County and all of the participating municipalities listed above shall be known as the “Study Area”. The Ordinance is described in greater detail in Section 2.0, *Project Description*. This section discusses:

- *The project background;*
- *The legal basis for preparing a Program EIR;*
- *The scope and content of the Program EIR;*
- *Type of EIR*
- *Lead, responsible, and trustee agencies; and*
- *The environmental review process required under the California Environmental Quality Act (CEQA).*

1.1 PROJECT BACKGROUND

In response to concerns regarding the environmental impacts related to single-use bags, the County of San Mateo on September 27th, 2011, directed staff to prepare an ordinance that:

- Bans the distribution of single-use bags
- Applies the ban to retail establishments including, but not limited to commercial establishments that sell perishable or nonperishable goods such as clothing, food, and personal items

County of San Mateo staff has prepared a draft Single Use Bag Ban Ordinance consistent with the Board of Supervisors' direction as described above (see Draft Ordinance in Appendix D).

The Proposed Ordinance is a discretionary project subject to the environmental review requirements of the California Environmental Quality Act (CEQA). Therefore, County of San Mateo staff determined that a Program EIR should be prepared examining the Ordinance's potential environmental impacts.

Based on consultation with other municipalities located within San Mateo County and in neighboring Santa Clara County, County staff determined that the Program EIR should take a regional approach to the analysis of potential impacts since a number of other municipalities are also considering a single use bag ban ordinance. Therefore, the analysis of the Proposed Ordinance in this Program EIR considers a bag ordinance adopted within unincorporated San Mateo County as well as a similar ordinance within each of the 24 participating municipalities in San Mateo and Santa Clara Counties (see list of participating municipalities above). As described above, for this Program EIR, the geographical limits of unincorporated San Mateo County and all of the participating municipalities shall be known as the "Study Area".

Several cities and counties in California have previously considered or passed similar ordinances within their respective jurisdictions. These include, but are not limited to: the City of San Francisco, the City of Seattle, the County of Los Angeles, the City of Berkeley, the City of San Jose, the City of Manhattan Beach, the City of Palo Alto, Marin County, the City of Malibu, the City of Santa Monica, Santa Clara County, the City of Sunnyvale, Alameda County, the City of Calabasas, the City of Fairfax, the City of Huntington Beach, the City of Dana Point, the City of Laguna Beach, and the City of Long Beach.

The County of San Mateo prepared a Notice of Preparation (NOP) of a Program EIR for the Proposed Ordinance and distributed the NOP for agency and public review on April 6, 2012 for a 30-day review period. The County received 37 letters in response to the NOP. The County also conducted seven public scoping meetings during the NOP comment period, which took place in Half Moon Bay (April 18), San Mateo (April 19), Mountain View (April 25), South San Francisco (April 26), Campbell (May 2), Milpitas (May 3) and Redwood City (May 3). To be as concise as possible and as allowed by CEQA, the Program EIR identifies common environmental topics of concern expressed in the scoping comments. Table 1-1 below summarizes these environmental topics of concern, beginning with the most common comments received. Not all comments received are summarized below. The table focuses on comments pertinent to CEQA. Comments related to the merit of the proposed project are outside the purview of CEQA analysis, and are therefore excluded from this table. The NOP and Initial Study prepared for the project as well all comment letters received are presented in Appendix A.

Table 1-1
Summary of Scoping Comments from Comment Letters and Stated at Public
Scoping Sessions

Topic of Concern Index	Comment Received	Response, including Reference to Where Comment is Addressed in the Program EIR
Topic No. 1	Multiple commenters stated that plastic carryout bags are not exclusively “single-use”, stating that they personally reuse plastic grocery bags for bin liners, containment of dog excrement, and other uses. In addition, multiple commenters stated that they also re-use paper bags for bin liners.	This opinion is noted and will be considered by County and city decision makers as they review the project. As noted in Section 2.0, <i>Project Description</i> (see page 2-3), single-use carry-out bags (plastic or paper) are narrowly defined in the Proposed Ordinance. It is noted that these bags can be reused by customers and are recyclable. Data shows that only 5% of single carry out plastic bags are recycled in California. ¹
Topic No. 2	Multiple commenters suggested that by banning plastic grocery bags, people who have reused these bags in the past will need to buy plastic bags to replace plastic carryout bags for uses such as bin liners, containment of dog excrement, and other uses.	This opinion is noted and will be considered by County and city decision makers as they review the project. However, the comment expresses concern about a potential economic impact of the proposed project, which is not CEQA’s purview. The purpose of the Program EIR is to address the project’s environmental effects, not its economic effects. CEQA Guidelines Section 15064(e) specifically states that “economic and social changes resulting from a project shall not be treated as significant effects on the environment.”
Topic No. 3	Multiple commenters noted that many customers do not wash their reusable bags on a regular basis and suggested that by encouraging the use of reusable bags, the Proposed Ordinance would increase health impacts due to the use of non-hygienic reusable bags.	While the proposed ordinance would promote a shift toward the use of reusable bags, periodic washing of reusable bags for hygienic purposes would be the responsibility of the individual customers. As required by the proposed Ordinance (see Appendix D), reusable bags are required to be machine washable or made from a material that can be cleaned or disinfected.
Topic No. 4	Multiple commenters suggested that the minimum charge for paper bags imposed by the Proposed Ordinance would create a financial hardship for some retail customers.	See Response to Topic No. 2.
Topic No. 5	Multiple commenters suggested that the minimum charge for paper bags imposed by the Proposed Ordinance and the need to purchase and/or bring reusable bags to the store when shopping would impact	See Response to Topic No. 2.

¹ US EPA, 2005; Green Cities California MEA, 2010; and Boustead, 2007).

Table 1-1
Summary of Scoping Comments from Comment Letters and Stated at Public
Scoping Sessions

Topic of Concern Index	Comment Received	Response, including Reference to Where Comment is Addressed in the Program EIR
	retailers economically.	
Topic No. 6	Multiple commenters suggested that the Proposed Ordinance would improve litter and capacity in local landfills.	Project impacts related to solid waste are addressed in Section 4.5, <i>Utilities</i> . Impacts related to reducing litter that may enter storm drains or other water ways are addressed in Section 4.4, <i>Hydrology and Water Quality</i> .
Topic No. 7	A commenter suggested an alternative that the bag ban also apply to restaurants.	As discussed in Section 6.0, <i>Alternatives</i> , Alternative #2 considers the impacts associated with an ordinance that would ban plastic bags at all retailers including restaurants.
Topic No. 8	A commenter noted that production and degradation of paper bags have greater impacts related to air quality, water quality and greenhouse gas emission levels than the production and degradation of plastic bags and these issues should be discussed in the EIR	Project impacts in the areas of air quality, water quality and levels of greenhouse gas emissions resulting from the production and degradation of paper bags as well as reusable bags are discussed in Section 4.1, <i>Air Quality</i> , 4.4, <i>Hydrology and Water Quality</i> , and 4.3, <i>Greenhouse Gas Emissions</i> , respectively.
Topic No. 9	An alternative was suggested by multiple commenters that instead of banning plastic bags, the County should consider litter removal programs, additional education efforts about the impacts of plastic bags and other plastic and non-plastic litter, larger or better enforced fines for littering, and/or better recycling programs for plastic bags.	As noted in Section 6.0, <i>Alternatives</i> , this alternative was considered, but rejected because it does not achieve all of the project objectives, as listed in Section 2.5 of this Program EIR. As noted in Section 2.0, <i>Project Description</i> , one of the project objectives is to reduce the amount of single-use plastic bags in trash loads and to promote a shift toward the use of reusable bags.
Topic No. 10	Some commenters suggested that Styrofoam, plastic water bottles, and "plastic rings" that hold together six-packs of soda should also be banned as their use also results in litter that impacts waterways.	The suggestion is noted and will be considered by County and city decision makers as they review the project. As noted in Section 6.0, <i>Alternatives</i> , this alternative was considered, but rejected as Styrofoam and other plastic materials are outside the scope of the proposed action and thus are not discussed within this Program EIR.
Topic No. 11	Multiple commenters suggested that the litter of plastic bag impacts wildlife.	Project impacts to wildlife and other biological resources are discussed in Section 4.2, <i>Biological Resources</i> .
Topic No. 12	Multiple commenters suggested an alternative that would ban plastic bags but would <u>not</u> require retailers to charge customers for recycled paper bags at the point of sale.	As noted in Section 6.0, <i>Alternatives</i> , this alternative was considered, but rejected because it does not achieve all of the Project objectives, as listed in Section 2.5 of this Program EIR, namely it will not deter the use of paper bags by customers in the Study Area.

Table 1-1
Summary of Scoping Comments from Comment Letters and Stated at Public
Scoping Sessions

Topic of Concern Index	Comment Received	Response, including Reference to Where Comment is Addressed in the Program EIR
Topic No. 13	An alternative was suggested that retailers be required to provide compostable and/or biodegradable bags.	As noted in Section 6.0, <i>Alternatives</i> , this alternative was considered, but rejected because it does not achieve all of the project objectives, as listed in Section 2.5 of this Program EIR. While biodegradable plastic may break down over time, they would not achieve the objective of avoiding litter and the associated adverse impacts to stormwater systems, aesthetics and the marine environment (San Francisco Bay and the Pacific Ocean).
Topic No. 14	An alternative was suggested that the Ordinance apply to doggie clean-up bags at public parks.	As noted in Section 6.0, <i>Alternatives</i> , this alternative was considered, but rejected because it does not achieve all of the project objectives, as listed in Section 2.5 of this Program EIR. Specifically, this alternative would not promote a shift toward reusable bags, as reusable bags would not be a feasible option for doggie clean-up, and may result in impacts to stormwater quality.
Topic No. 15	Several commenters suggested that the EIR include analysis of impacts related to the transportation and disposal of plastic bags.	Project-related transportation impacts are discussed in the Initial Study (see Appendix A of the Program EIR). Project impacts related to disposal of solid waste are discussed in Section 4.5, <i>Utilities</i> .
Topic No. 16	A commenter suggested that the EIR include impacts related to the manufacturing of reusable bags.	Project impacts related to the manufacturing of reusable bags (as well as paper and plastic bags) is discussed in Section 4.1, <i>Air Quality</i> , 4.2, <i>Biological Resources</i> , 4.3, <i>Greenhouse Gas Emissions</i> , 4.4, <i>Hydrology and Water Quality</i> , and 4.5, <i>Utilities and Service Systems</i> .
Topic No. 17	A commenter suggested that by imposing a minimum charge for paper bags, the Proposed Ordinance would affect employment at paper bag manufacturing facilities.	See Response to Topic No. 2.
Topic No. 18	A commenter suggested that small bits of plastic in rivers and oceans have been shown to attract and collect very high concentrations of hydrophobic hazardous chemicals such as PCBs, DDE, and various pesticides.	Project impacts related to plastics on aquatic habitats and species is discussed in Section 4.2, <i>Biological Resources</i> .
Topic No. 19	A commenter suggested that retail stores regulated by AB 2449 be more strictly enforced to ensure that collected bags are properly recycled.	Assembly Bill (AB) 2449 is described in detail in Section 2.0, <i>Project Description</i> . AB 2449 is state law and local jurisdictions would not have enforcement authority over retail stores.
Topic No. 20	A commenter suggested that the EIR include analysis of project impacts related to	Impacts related to air quality, biological resources, greenhouse gas emissions, hydrology and water quality from the production

Table 1-1
Summary of Scoping Comments from Comment Letters and Stated at Public
Scoping Sessions

Topic of Concern Index	Comment Received	Response, including Reference to Where Comment is Addressed in the Program EIR
	forestry resources and tree removal for production of paper bags.	and manufacturing of paper bags is described in Section 4.1, <i>Air Quality</i> , 4.2, <i>Biological Resources</i> , 4.3, <i>Greenhouse Gas Emissions</i> , and 4.4, <i>Hydrology and Water Quality</i> , respectively.
Topic No. 21	A commenter requested that the EIR quantify the number of single-use bags that are recycled versus the number that enter the environment as litter.	As noted in Section 2.0, <i>Project Description</i> , approximately 5% of single-use plastic bags in California are recycled. Estimates for the number of bags that enter the environment as litter are not available, and determining the precise number for the Study Area is beyond the scope of this analysis.
Topic No. 22	A commenter suggested that a reduction in the fee for paper bags for low-income individuals.	See Response to Topic No. 2.
Topic No. 23	A commenter suggested an alternative to the Proposed Ordinance that would target litter generated by homeless encampments near water bodies.	As noted in Section 6.0, <i>Alternatives</i> , this alternative was considered, but rejected because it does not achieve all of the project objectives, as listed in Section 2.5 of this Program EIR. As noted in Section 2.0, <i>Project Description</i> , one of the project objectives is to reduce the amount of single-use plastic bags in trash loads and to promote a shift toward reusable bags.
Topic No. 24	A commenter suggested that the EIR consider water quality impacts of paper mills.	Impacts related to water quality from the manufacturing of paper bags is discussed in Section 4.4, <i>Hydrology and Water Quality</i> .
Topic No. 25	A commenter suggested an alternative that would pay people to use reusable bags rather than banning single-use bags.	As noted in Section 6.0, <i>Alternatives</i> , this alternative was considered, but rejected because it does not achieve all of the project objectives, as listed in Section 2.5 of this Program EIR. As noted in Section 2.0, <i>Project Description</i> , one of the project objectives is to reduce the amount of single-use plastic bags in trash loads and to promote a shift toward reusable bags.
Topic No. 26	A commenter suggested that the Ordinance be implemented incrementally.	As stated in Section 2.0, <i>Project Description</i> , the Proposed Ordinance would initially require a minimum charge of ten cents (\$0.10) per paper bag until December 31, 2014 and twenty-five cents (\$0.25) per paper bag on or after January 1, 2015.
Topic No. 27	A commenter suggested that the Proposed Ordinance would inhibit "impulse buys," which would impact the local economy.	See Response to Topic No. 2.
Topic No. 28	A commenter requested that the EIR explain how a single-use bag ban would help achieve RWQCB reductions.	As described in the <i>Regulatory Setting</i> in Section 4.4, <i>Hydrology and Water Quality</i> , the Municipal Regional Stormwater NPDES Permit (MRP) for Phase I communities in the San Francisco Bay (Order R2-2009-

Table 1-1
Summary of Scoping Comments from Comment Letters and Stated at Public
Scoping Sessions

Topic of Concern Index	Comment Received	Response, including Reference to Where Comment is Addressed in the Program EIR
		0074) was adopted by the Regional Water Quality Control Board (RWQCB) for Region 2 on October 14, 2009. This permit regulates discharges from municipal separate storm drain systems into waterways under each co-permittee's jurisdiction. Provision C.10 of the MRP (Trash Load Reduction) requires Permittees to reduce trash from their Municipal Separate Storm Sewer Systems (MS4s) by 40 percent before July 1, 2014 by implementing control measures and other actions to reduce trash loads (RWQCB: San Francisco Bay Region: Order R2-2009-0074, October 2009; and, EOA Inc., February 2011). The Proposed Ordinance would be considered an "implementing control measure" to reduce the amount of single-use plastic bags in trash loads (e.g., landfills), in conformance with the trash load reduction requirements of the NPDES Municipal Regional Permit (as stated in Section 2.0, <i>Project Description</i>).
Topic No. 30	A commenter requested that technical data used for the analysis be included in the EIR appendix.	Refer to Appendix B for Air Quality calculations and Appendix C for Utility calculations. Other technical reports utilized for the analysis (including US EPA, 2005; Green Cities California MEA, 2010; and Boustead, 2007) are cited in Section 7.0, <i>References</i> .
Topic No. 31	A commenter requested that impacts to the senior and youth populations be considered.	The purpose of the Program EIR is to address the project's environmental effects. Social effects are outside the scope of CEQA (CEQA Guidelines §15131)
Topic No. 32	A commenter suggested that impacts to water bodies as a result of the use of chemicals used to make reusable bags be considered in the EIR.	Project impacts to water quality, water supply, and hazardous materials are discussed in Section 4.4, <i>Hydrology and Water Quality</i> , Section 4.5, <i>Utilities and Service Systems</i> , and the Initial Study (Appendix A), respectively.

1.2 PURPOSE AND LEGAL AUTHORITY

The proposed Single Use Bag Ban Ordinance requires the discretionary approval of the County of San Mateo and each of the participating municipalities. Therefore, it is subject to the requirements of CEQA. In accordance with Section 15121 of the *CEQA Guidelines*, the purpose of this Program EIR is to serve as an informational document that:

...will inform public agency decision-makers and the public generally of the significant environmental effects of a project, identify possible ways to minimize the significant effects, and describe reasonable alternatives to the project.

This Program EIR is to serve as an informational document for the public and the decision-makers of the County of San Mateo and the participating municipalities. The County will review and consider the information in the Program EIR, along with any other relevant information, in making final decisions regarding the Proposed Ordinance for the unincorporated areas of the County (Section 15121 of the *CEQA Guidelines*). The environmental review process will culminate with a County Board of Supervisor hearing to consider certification of a Final Program EIR and approval of the Proposed Ordinance. For each of the participating municipalities, Section 2.6 in Section 2.0, *Project Description*, provides a detailed description of approvals that may be necessary for the Proposed Ordinance.

1.3 LEAD, RESPONSIBLE, AND TRUSTEE AGENCIES

The *CEQA Guidelines* define lead, responsible and trustee agencies. The County of San Mateo is the lead agency for the Proposed Ordinance as it holds principal responsibility for approving the Proposed Ordinance. The individual incorporated cities/ participating municipalities would be the lead agencies for their respective city ordinances, should the cities decide to adopt comparable ordinances. The County Board of Supervisors will consider certification of the Program EIR and has the authority to render a decision on the Proposed Ordinance that would affect the County's unincorporated territories.

A responsible agency refers to a public agency other than the lead agency that has discretionary approval over a project, and a trustee agency refers to a state agency having jurisdiction by law over natural resources affected by a project. The 24 participating municipalities would be responsible agencies because each individual municipality would have discretionary approval over the Proposed Ordinance within its respective jurisdiction. There are no trustee agencies associated with this Project.

1.4 TYPE OF EIR

This EIR is considered a Program EIR under the *CEQA Guidelines* (Section 15168 and 15180(b)). Information in this Program EIR can be used with subsequent environmental documentation for similar ordinances by each of the 24 participating municipalities to provide the basis for determining whether an ordinance in that jurisdiction would have any significant effect, and if necessary, to focus further environmental assessment on discussion of new effects that had not been considered before. This Program EIR does not preclude any requirement for individual participating municipalities to undergo further environmental review.

The degree of specificity required in this EIR corresponds to the degree of specificity involved in the underlying activity (the Proposed Ordinance) which is described in the Program EIR. The *CEQA Guidelines* provide the standard for the degree of specificity on which this document is based. Section 15146 of the *CEQA Guidelines* states:

- (a) *An EIR on a construction project will necessarily be more detailed in the specific effects of the project than will be an EIR on the adoption of a local general plan or*

comprehensive zoning ordinance because the effects of the construction can be predicted with greater accuracy.

- (b) *An EIR on a project such as the adoption or amendment of a comprehensive zoning ordinance or a local general plan should focus on the secondary effects that can be expected to follow from the adoption or amendment, but the EIR need not be as detailed as an EIR on the specific construction projects that might follow.*

The analysis provided in this Program EIR is intended to provide sufficient information to understand the environmental impacts of the Proposed Ordinance at a planning level and to permit a reasonable choice of alternatives so far as the environmental aspects are concerned and is intended to permit informed decision making and public participation. As a program-level EIR, this document focuses on the broad changes to the environment that would be expected to result from implementation of the Proposed Ordinance within the unincorporated territories of the County, as well as potential changes in the environment that would be expected to result from implementation of similar ordinances in the 24 participating municipalities.

1.5 EIR SCOPE AND CONTENT

This Program EIR addresses the potentially significant effects that could result from adoption of the Proposed Ordinance as identified by San Mateo County, the participating municipalities, and scoping comments. The issues addressed in this Program EIR include:

- *Air Quality*
- *Biological Resources*
- *Greenhouse Gas Emissions*
- *Hydrology/Water Quality*
- *Utilities and Service Systems*

The Program EIR references pertinent policies and guidelines of San Mateo County and each of the participating municipalities, certified EIRs and other adopted CEQA documents, and background documents prepared by the County in preparing the Proposed Ordinance. A full reference list is contained in Section 7.0, *References and Report Preparers*.

The alternatives section of the Program EIR (Section 6.0) was prepared in accordance with Section 15126.6 of the *CEQA Guidelines*. The alternatives discussion evaluates the CEQA-required “no project” alternative and three alternative scenarios for the Proposed Ordinance. It also identifies the environmentally superior alternative among the alternatives assessed.

The level of detail contained throughout this Program EIR is consistent with the requirements of CEQA and applicable court decisions. The *CEQA Guidelines* provide the standard of adequacy on which this document is based. The *CEQA Guidelines* state:

An EIR should be prepared with a sufficient degree of analysis to provide decision-makers with information which enables them to make a decision which intelligently takes

account of environmental consequences. An evaluation of the environmental effects of the proposed project need not be exhaustive, but the sufficiency of an EIR is to be reviewed in light of what is reasonably feasible. Disagreement among experts does not make an EIR inadequate, but the EIR should summarize the main points of disagreement among the experts. The courts have looked not for perfection, but for adequacy, completeness, and a good faith effort at full disclosure. (Section 15151)

1.6 ENVIRONMENTAL REVIEW PROCESS

The major steps in the environmental review process, as required under CEQA, are outlined below. The steps are presented in sequential order.

1. **Notice of Preparation (NOP).** After deciding that an EIR is required, the lead agency must file an NOP soliciting input on the EIR scope to the State Clearinghouse, other concerned agencies, and parties previously requesting notice in writing (*CEQA Guidelines* Section 15082; Public Resources Code Section 21092.2). The NOP must be posted in the County Clerk's office for 30 days. The NOP may be accompanied by an Initial Study that identifies the issue areas for which the proposed project could create significant environmental impacts (in this case, the Initial Study accompanies the Draft EIR).
2. **Draft Environmental Impact Report (DEIR).** The DEIR must contain:
 - a) Table of contents or index;
 - b) Summary;
 - c) Project description;
 - d) Environmental setting;
 - e) Discussion of significant impacts (direct, indirect, cumulative, growth-inducing and unavoidable impacts);
 - f) Discussion of alternatives;
 - g) Mitigation measures; and
 - h) Discussion of irreversible changes.
3. **Notice of Completion/Notice of Availability of Draft EIR.** A lead agency must file a Notice of Completion with the State Clearinghouse when it completes a Draft EIR and prepare a Public Notice of Availability for the Draft EIR. The lead agency must place the Notice in the County Clerk's office for 45 days (Public Resources Code Section 21092) and send a copy of the Notice to anyone requesting it (*CEQA Guidelines* Section 15087). Additionally, public notice of DEIR availability must be given through at least one of the following procedures: a) publication in a newspaper of general circulation; b) posting on and off the project site; and c) direct mailing to owners and occupants of contiguous properties. The lead agency must solicit input from other agencies and the public, and respond in writing to all comments received (Public Resources Code Sections 21104 and 21253). The minimum public review period for a DEIR is 30 days. When a Draft EIR is sent to the State Clearinghouse for review, the public review period must be 45 days unless the Clearinghouse (Public Resources Code 21091) approves a shorter period.

4. **Final EIR.** A Final EIR must include: a) the Draft EIR; b) copies of comments received during public review; c) list of persons and entities commenting; and d) responses to comments.
5. **Certification of FEIR.** Prior to making a decision on a proposed project, the lead agency must certify that: a) the FEIR has been completed in compliance with CEQA; b) the Final EIR was presented to the decision-making body of the lead agency; and c) the decision-making body reviewed and considered the information in the Final EIR prior to approving a project (*CEQA Guidelines* Section 15090).
6. **Lead Agency Project Decision.** A lead agency may: a) disapprove a project because of its significant environmental effects; b) require changes to a project to reduce or avoid significant environmental effects; or c) approve a project despite its significant environmental effects, if the proper findings and statement of overriding considerations are adopted (*CEQA Guidelines* Sections 15042 and 15043).
7. **Findings/Statement of Overriding Considerations.** For each significant impact of the project identified in the EIR, the lead or responsible agency must find, based on substantial evidence, that either: a) the project has been changed to avoid or substantially reduce the magnitude of the impact; b) changes to the project are within another agency's jurisdiction and such changes have or should be adopted; or c) specific economic, social, or other considerations make the mitigation measures or project alternatives infeasible (*CEQA Guidelines* Section 15091). If an agency approves a project with unavoidable significant environmental effects, it must prepare a written Statement of Overriding Considerations that sets forth the specific social, economic, or other reasons supporting the agency's decision.
8. **Mitigation Monitoring Reporting Program.** When an agency makes findings on significant effects identified in the EIR, it must adopt a reporting or monitoring program for mitigation measures that were adopted or made conditions of project approval to mitigate significant effects.
9. **Notice of Determination.** An agency must file a Notice of Determination after deciding to approve a project for which an EIR is prepared (*CEQA Guidelines* Section 15094). A local agency must file the Notice with the County Clerk. The Notice must be posted for 30 days and sent to anyone previously requesting notice. Posting of the Notice starts a 30-day statute of limitations on CEQA legal challenges (Public Resources Code Section 21167[c]).

2.0 PROJECT DESCRIPTION

This section describes the Proposed Single Use Bag Ban Ordinance (“Proposed Ordinance”), including information about the project proponent, the project location, major project characteristics, project objectives, and discretionary approvals needed for project approval.

2.1 PROJECT SPONSOR

County of San Mateo Health System
Environmental Health Services
2000 Alameda de las Pulgas, Suite 100
San Mateo, CA 94403
Contact: Dean D. Peterson, Director
(650) 372-6200

2.2 PROJECT LOCATION

For the purposes of this analysis, it is assumed that the Proposed Ordinance would apply to any commercial establishment that sells perishable or nonperishable goods, including, but not limited to, clothing, food, and personal items directly to the customer; and is located within or doing business within the geographical limits of unincorporated San Mateo County or any of the following participating municipalities:

San Mateo County

- Belmont
- Brisbane
- Burlingame
- Colma
- Daly City
- East Palo Alto
- Foster City
- Half Moon Bay
- Menlo Park
- Millbrae
- Pacifica
- Portola Valley
- Redwood City
- San Bruno
- San Carlos
- San Mateo
- South San Francisco
- Woodside

Santa Clara County

- Milpitas
- Cupertino
- Los Gatos
- Los Altos
- Campbell
- Mountain View

The areas within the geographical limits of unincorporated San Mateo County and all of the participating municipalities listed above is referred to as the “Study Area” in this Program EIR. Figure 2-1 and Figure 2-2 illustrate the Study Area in its regional context (in both San Mateo County and Santa Clara County).

2.3 EXISTING CHARACTERISTICS

2.3.1 Carryout Bags in the Study Area

In response to concerns regarding the environmental impacts related to single-use carryout

bags, on September 27, 2011, the County of San Mateo Board of Supervisors directed staff to prepare an ordinance that:

- Bans the distribution of single-use bags
- Applies the ban to retail establishments including, but not limited to commercial establishments that sell perishable or nonperishable goods such as clothing, food, and personal items

Based on existing conditions, it is estimated that the Proposed Ordinance would apply to approximately 3,110 retailers located within the Study Area. A list of potential stores is included in Appendix E.

Types of Carryout Bags

Single-use disposable plastic grocery bags are typically made of thin, lightweight high density polyethylene (HDPE) (Hyder Consulting, 2007). For consumers, they offer a hygienic, odorless, waterproof and sturdy carrying sack, but are intended for one use before disposal. Currently, almost 20 billion of these plastic grocery bags are consumed annually in California (Green Cities California MEA, 2010; and CIWMB, 2007). Conventional single-use plastic bags are a product of the petrochemical industry. It is also claimed that conventional single-use plastic bags are manufactured by independent manufacturers who purchase virgin resin from petrochemical companies or obtain non-virgin resin from recyclers or other sources and that 85% of plastic bags used in the United States are made in the United States (Stephen L. Joseph, July 22, 2010). Their life cycle begins with the conversion of crude oil or natural gas into hydrocarbon monomers, which are then further processed into polymers (Herrera et al, 2008; County of Los Angeles, 2009). These polymers are connected with heat to form plastic resins, which are then blown through tubes to create the air pocket of the bag. Once cooled, the plastic film is stretched to the desired size of the bag and cut into individual bags. Typical single-use plastic bags are approximately five to nine grams in weight, and can be purchased in bulk for approximately two to five cents per bag (AEA Technology, 2009). Single-use plastic bags can be reused by customers and are recyclable. Approximately 5% of single-use plastic bags in California are recycled (US EPA, 2005; Green Cities California MEA, 2010; and Boustead, 2007).

Like plastic grocery shopping bags, single-use paper bags are usually distributed free of charge to customers at grocery stores, and are intended for one use before disposal. Paper bags are recyclable and can be reused by customers. Approximately 21% of paper bags nationwide are recycled (CIWMB, 2009). It is also claimed that consumers nationally recycle paper products at a rate of 50 percent (International Paper, 2012). Paper grocery bags are typically produced from kraft paper and weigh between 50 and 100 grams, depending on whether or not the bag includes handles (AEA Technology, 2009). These bags can be purchased in bulk for approximately 15 to 25 cents per bag (City of Pasadena, 2008). Kraft paper bags are manufactured from a pulp that is produced by digesting a material into its fibrous constituents via chemical and/or mechanical means (FRIDGE, 2002). Kraft pulp is produced by chemical separation of cellulose from lignin (Environmental Paper Network, 2007). Chemicals used in this process include caustic sodas, sodium hydroxide, sodium sulfide, and chlorine compounds (Environmental Paper Network, 2007). The paper bags are typically made from trees (paper) and corn (glue) which are both re-planted and re-grown (International Paper, 2012). Processed

Figure 2-2

and then dried and shaped into large rolls, the paper is then formed into bags, baled, and then distributed to grocery stores. It is also claimed that paper bags have many other uses outside of the grocery store including use as recycling, and composting containers, school book covers, gift wrap, and other craft projects, and use for picnics or sporting events (International Paper, 2012).

Multiple types of single-use biodegradable bags are currently available, distinguished by their material components. Biodegradable bags are composed of thermoplastic starch-based polymers, which are made with at least 90% starch from renewable resources such as corn, potato, tapioca, or wheat, or from polyesters, manufactured from hydrocarbons, or starch-polyester blends (James and Grant, 2005). These bags are approximately the same size and weight as HDPE plastic bags, but are more expensive. They can be purchased in bulk for approximately 12 to 30 cents per bag (www.ecoproducts.com, 2009).

Reusable bags can be made from plastic or a variety of cloths such as vinyl or cotton. These bags differ from the single-use bags in their weight and longevity. Built to withstand many uses, they typically cost approximately three dollars wholesale, weigh at least ten times what an HDPE plastic bag weighs and two times what a paper bag weighs, and require greater material consumption on a per bag basis than HDPE plastic bags (ExcelPlas Australia, 2004; City of Pasadena, 2008). Many types of reusable bags are available today. These include: (1) non-woven polypropylene (100% recyclable) ranging from \$1-\$2.50 per bag; (2) cotton canvas bags, which are approximately \$5.00 per bag; (3) bags made from recycled water/soda bottles, which are approximately \$6.00 per bag; (4) polyester and vinyl, which are approximately \$10.00 per bag; and (5) 100% cotton, which are approximately \$5.00 to 10.00 per bag.

The production stages in reusable bag life cycles depend on the materials used. Once used, these bags are reused until worn out through washing or regular use, and then typically disposed either in the landfill or recycling facility.

Carryout Bag Use in the Study Area

As shown in Table 2-1, based on the current statewide data which estimates that almost 20 billion plastic grocery bags (or approximately 531 bags per person) are consumed annually in California (Green Cities California MEA, 2010; and CIWMB, 2007), retail customers within the Study Area currently use about 546 million plastic bags per year. The customer base of retailers located within the Study Area may include residents of communities located within or outside of the Study Area (i.e., visitors who live outside the Study Area but travel to shop within the Study Area). However, for this analysis, in order to estimate the current number of plastic bags used per year in the Study Area, the Program EIR applies the rate discussed above (531 bags used per person/per year) to the number of residents in the Study Area. This estimate is considered reasonable and conservative for the purposes of this analysis.

**Table 2-1

Total	1,041,302	Total	552,931,362

* California Department of Finance, "City/County Population and Housing Estimates" (May 2012).

**Based on annual statewide estimates of plastic bag use from the CIWMB (2007) - 531 bags per person = 20 billion bags used statewide per year (CIWMB, 2007) / 37,678,563 people statewide (California's current population according to the State Department of Finance, 2012).

¹ These cities are not included within the scope of the Proposed Ordinance since they do not contain any retailers that would be subject to the proposed Ordinance. However, because residents living within these cities would shop at retailers in the neighboring communities which would be subject to the Proposed Ordinance, these customers' bag use is considered within this analysis as a conservative approach.

2.3.2 Regulatory Setting

In 2006, California enacted AB 2449 (Chapter 845, Statutes of 2006), which became effective on July 1, 2007. The statute states that stores providing plastic carryout bags to customers must provide at least one plastic bag collection bin in an accessible location to collect used bags for recycling. The store operator must also make reusable bags available to shoppers for purchase. AB 2449 applies to retail stores of over 10,000 square feet that include a licensed pharmacy and to supermarkets with gross annual sales of \$2 million or more that sell dry groceries, canned goods, nonfood items or perishable goods. Stores are required to maintain records of their AB 2449 compliance and make them available to the California Integrated Waste Management Board (CIWMB) or local jurisdiction.

AB 2449 further requires the manufacturers of plastic carryout bags to develop educational materials to encourage the reducing, reusing, and recycling of plastic carryout bags, and to make the materials available to stores. Manufacturers must also work with stores on their at-

store recycling programs to help ensure the proper collection, transportation and recycling of the plastic bags.

Finally, AB 2449 restricts the ability of cities (including charter cities) and counties to regulate single-use plastic grocery bags through imposition of a fee. Public Resources Code Section 42254(b) provides as follows:

Unless expressly authorized by this chapter, a city, county, or other public agency shall not adopt, implement, or enforce an ordinance, resolution, regulation, or rule to do any of the following:

- (1) Require a store that is in compliance with this chapter to collect, transport, or recycle plastic carryout bags.*
- (2) Impose a plastic carryout bag fee upon a store that is in compliance with this chapter.*
- (3) Require auditing or reporting requirements that are in addition to what is required by subdivision (d) of Section 42252, upon a store that is in compliance with this chapter.*

AB 2449 expires under its own terms on January 1, 2013, unless extended. There are no other California statutes that directly focus on grocery bags.

2.4 PROPOSED ORDINANCE CHARACTERISTICS

For the purposes of this Program EIR, it is assumed that the Proposed Ordinance would apply to all retail establishments located within the limits of the Study Area, including those selling clothing, food, and personal items directly to the customer. It would not apply to restaurants. The Proposed Ordinance would (1) prohibit the free distribution of single-use carryout paper and plastic bags and (2) require retail establishments to charge customers for recycled paper bags and reusable bags at the point of sale. The minimum charge would be ten cents (\$0.10) per paper bag until December 31, 2014 and twenty-five cents (\$0.25) per paper bag on or after January 1, 2015.

The intent of the Proposed Ordinance is to reduce the environmental impacts related to the use of single-use carryout bags, and to promote a shift toward the use of reusable bags. It is anticipated that by prohibiting single-use plastic carryout bags and requiring a mandatory charge for each paper bag distributed by retailers, the Proposed Ordinance would provide a disincentive to customers to request paper bags when shopping at regulated stores and promote a shift to the use of reusable bags by retail customers, while reducing the number of single-use plastic and paper bags within the Study Area.

Single-use plastic carryout bags are defined as bags made from petroleum or bio-based plastic that are less than 2.25 mils thick (0.00225 inches). The Proposed Ordinance would prohibit retailers from distributing both petroleum and bio-based single-use carryout plastic bags at the point of sale. The Proposed Ordinance would not prohibit the distribution of plastic “product bags”, as defined, which includes bags without handles provided to a customer (1) to transport prepared food, produce, bulk food or meat from a department within a store to the point of sale;

(2) to hold prescription medication dispensed from a pharmacy; or (3) to segregate food or merchandise that could damage or contaminate other food or merchandise when placed together in a reusable bag or recycled paper bag. The Proposed Ordinance would not apply to restaurants and other food service providers, allowing them to provide plastic bags to customers for prepared take-out food intended for consumption off of the food provider's premises.

As noted above, the Proposed Ordinance would require regulated retailers to impose a mandatory charge for each paper carryout bag provided. Retail establishments would be required to keep a complete and accurate record (including documents of the purchase and sale of any recycled paper bag or reusable bag) for a minimum period of three years from the date of purchase and sale. The record must be available for inspection during regular business hours by any County employee authorized to enforce this part at no cost to the County. The charge would be retained by the affected stores to compensate the stores for increased costs related to compliance with the Proposed Ordinance, actual costs associated with providing recyclable paper carryout bags or reusable bags, and costs associated with a store's educational materials or education campaign encouraging the use of reusable bags.

The complete Draft Ordinance is contained in Appendix D.

2.5 PROJECT OBJECTIVES

The County of San Mateo's and the participating cities' objectives for the Proposed Ordinance include:

- Reducing the amount of single-use plastic bags in trash loads (e.g., landfills), in conformance with the trash load reduction requirements of the NPDES Municipal Regional Permit
- Reducing the environmental impacts related to single-use plastic carryout bags, such as impacts to biological resources (including marine environments), water quality and utilities (solid waste)
- Deterring the use of paper bags by customers in the respective jurisdictions
- Promoting a shift toward the use of reusable carryout bags by retail customers in the respective jurisdictions
- Avoiding litter and the associated adverse impacts to stormwater systems, aesthetics and the marine environment (San Francisco Bay and the Pacific Ocean)

2.6 REQUIRED APPROVALS and PERMITS

For unincorporated San Mateo County, the Proposed Ordinance would require an amendment to the San Mateo County Ordinance Code with discretionary approval by the San Mateo County Board of Supervisors. The following approvals would be required:

- *Certification of the Final Program EIR (Board of Supervisors)*

- *Adoption of an Ordinance amending the Ordinance Code (Board of Supervisors)*

For each of the 24 participating agencies, the Proposed Ordinance would require an amendment to the city's municipal code with discretionary approval by the municipality's city council. The following approvals would be required for each municipality:

- *Consider the Final Program EIR (City Council)*
- *Adoption of an Ordinance amending the Ordinance Code (City Council)*

Subsequent to adoption of the Ordinance, each municipality would need to file a Notice of Determination (NOD) similar to the NOD to be filed by the County as lead agency after its adoption of the Ordinance.

3.0 ENVIRONMENTAL SETTING

This section provides a general overview of the environmental setting for the Proposed Ordinance. More detailed descriptions of the environmental setting germane to each environmental issue area can be found in Section 4.0, *Environmental Impact Analysis*.

3.1 REGIONAL SETTING

The proposed Single-Use Bag Ban Ordinance (Proposed Ordinance) would regulate the use of paper and plastic single-use bags within the Study Area. The Study Area includes unincorporated County of San Mateo and 24 participating municipalities in San Mateo and Santa Clara Counties.

3.1.1 County of San Mateo

The County of San Mateo is bounded to the west by the Pacific Ocean and to the east by the San Francisco Bay. Geographically, the County can be divided into distinctive urban and rural subregions: (1) the urban Bayside, (2) the rural Skyline area, and (3) the rural Coastside. Land is used in San Mateo County for many different purposes ranging from urban to rural. Along San Francisco Bay, suburban cities and towns dominate, with primarily residential, commercial, and industrial uses. In the redwood forests of the Santa Cruz Mountains, land is used for timber harvesting and recreation. On the Coastside the primary land uses are agriculture and general open space.

The climate of San Mateo County is of the semi-arid Mediterranean type, characterized by dry, mild summers and moderately moist, cool winters. Most of the rainfall occurs between November and April. It is during this time when over 90% of the annual surface runoff also occurs. San Mateo County is located within the San Francisco Bay Area Air Basin, which is part of the Bay Area Air Quality Management District (BAAQMD). The BAAQMD consists of Napa, Marin, San Francisco, Contra Costa, Alameda, San Mateo, and Santa Clara counties, the southern portion of Sonoma County, and the western portion of Solano County. There are 34 separate watersheds in the County, of which 22 drain into the Pacific Ocean and 12 drain into San Francisco Bay (County of San Mateo General Plan, November 1986). Seasonal rainfall variation is reflected in the monthly stream flows as local drainages often run dry by the middle or late summer.

San Mateo County has a population of 729,443 (California Department of Finance, 2012). These residents are served by various sources of water supply. Nearly 90% of the water supplied to the Bayside and the northern portion of the Coastside is provided by the San Francisco Water Department (SFWD) through contractual agreements (County of San Mateo General Plan, November 1986). This supply originates from local reservoirs and the Sierra Nevada with the Sierra system of reservoirs (primarily the Hetch-Hetchy Reservoir) providing the bulk of the supply. Local surface water and groundwater sources are used to supplement SFWD water. Wastewater treatment for areas in San Mateo County is provided by 11 treatment plants, two of which are located outside of the County.

The transportation system in San Mateo County consists of highways, streets, and parking areas for automobile travel, a countywide bus system, a commuter rail line, bikeways, pedestrian sidewalks, an international airport (San Francisco International (SFO)), and a seaport. The system provides for the shipment of goods as well as the movement of people. Major regional transportation facilities include the Bayshore Freeway (U.S. 101), Junipero Serra Freeway (Interstate 280), State Route 92, and Cabrillo Highway (State Route 1). Major arterials in the Study Area include El Camino Real and Woodside Road. Transit service within the County of San Mateo is provided by the Caltrain Peninsula Rail Service and by the San Mateo County Transit District. Both extend service into adjoining San Francisco and Santa Clara counties. Similarly, BART and the San Francisco MUNI system overlap into the North County, while the Santa Clara County Transit District extends service into Menlo Park.

3.1.2 County of Santa Clara

Six of the 24 cities that are contemplating adoption of the Proposed Ordinance are located in Santa Clara County. Santa Clara County's 832,000 acres may be grouped into four main categories: rural unincorporated areas, cities (urban incorporated areas), urban unincorporated areas, and Urban Service Areas (USAs). All six participating municipalities in Santa Clara County are cities (urban incorporated areas) located in the northern Santa Clara Valley. The sprawling suburban character of the northern Santa Clara Valley has been changing since the 1950s, with multi-story office buildings, hotels, apartments, and condominiums beginning to dominate the valley's flat landscape (County of Santa Clara General Plan DEIR, September 1994). By contrast, the southern portion of Santa Clara Valley remains predominantly rural in character.

Santa Clara County is also located in the San Francisco Bay Area Air Basin. In general, the County's climate is similar to San Mateo County as it is characterized by northwesterly winds generated by high-pressure cells in the Pacific, which are drawn through the Golden Gate and forced into a more westerly orientation.

Santa Clara County has a population of 1,816,486 (California Department of Finance, 2012). The populations of the cities of Milpitas (66,966), Cupertino (59,022), Los Gatos (29,854), Los Altos (29,460), Campbell (39,882) and Mountain View (75,275) make up approximately 17% of the total County population.

Santa Clara County residents are served by diverse sources of water supply. Santa Clara County's water supply consists of: water imported from other areas of the state, water pumped from natural underground aquifers that lay beneath the County, and water derived from surface runoff. Santa Clara County is served by eight municipal and eight special sanitary district sewage collection systems. Sewage collected from incorporated areas, in the northern part of the County, is treated at the San Jose/Santa Clara Water Pollution Control, Palo Alto and Sunnyvale plants. These plants discharge their effluent directly or indirectly into the San Francisco Bay. The Gilroy/Morgan Hill sewage treatment plant handles solids from septic systems in the South County rural unincorporated areas.

Santa Clara County is served by an extensive highway system. The main components of this system are Interstates 280, 680, and 880; and State Highways 101, 17, 85, 87, 152, and 237. The expressway system interconnects with virtually all of the North County. The main routes in the

South County are 101, 152, Monterey Road, and Santa Teresa Boulevard. The Santa Clara County Transit District (SCCTD) has provided bus service in the County since 1973.

3.2 CUMULATIVE PROJECTS SETTING

CEQA defines cumulative impacts as two or more individual actions that, when considered together, are considerable or will compound other environmental impacts. Cumulative impacts are the changes in the environment that result from the incremental impact of development of the proposed project and other nearby projects. For example, traffic impacts of two nearby projects may be insignificant when analyzed separately, but could have a significant impact when analyzed together. Cumulative impact analysis allows the Program EIR to provide a reasonable forecast of future environmental conditions and can more accurately gauge the effects of a series of projects.

Although CEQA analysis typically lists development projects in the vicinity of a project site, this document analyzes the environmental impacts associated with a proposed ordinance and does not include development or construction activity. As such, the cumulative significance of the proposed Single-Use Bag Ban Ordinance has been analyzed within the context of other bag ordinances that are approved or pending throughout California. Table 3-1 lists current adopted and pending ordinances in California. These ordinances are considered in the cumulative analyses in Section 4.0, *Environmental Impact Analysis*. As shown in Table 3-1, there are currently 24 adopted, proposed or pending bag ordinances (including the proposed Single-Use Bag Ban Ordinance) located throughout California.

Table 3-1
Adopted, Proposed and Pending Bag Ordinances in California

Ordinance Location	Proposed Action	Status
City of Calabasas	This ordinance bans the issuance of plastic carryout bags and imposes a ten (10) cent charge on the issuance of recyclable paper carryout bags at regulated stores.	Adopted February 2011 Effective July 2011
City of Carpinteria	This ordinance is the first double bag ban in the state. Starting in July 2012, large retailers as specified are prohibited from distributing single-use paper and plastic bags. Starting in April 2013, plastic bags are banned in all other retail stores including restaurants.	Adopted March 12, 2012
City of Dana Point	This ordinance places a ban on single-use plastic bags from all retail stores within city limits.	Adopted March 6, 2012 Effective in larger stores April 1, 2013, and all other stores October 1, 2013.
City of Fairfax	This ordinance allows all stores, shops, eating places, food vendors and retail food vendors, to provide only recyclable paper or reusable bags as checkout bags to customers.	Adopted August 2007 After legal challenge, adopted by voter initiative November 2008
City of Laguna Beach	This ordinance requires a plastic bag ban in all retail stores. Grocery stores,	Adopted February 2012 Effective January 1, 2013

**Table 3-1
Adopted, Proposed and Pending Bag Ordinances in California**

Ordinance Location	Proposed Action	Status
	pharmacies, and convenience/liquor stores must include a 10 cent minimum price requirement on paper bags distributed.	
City of Long Beach	This ordinance bans plastic carryout bags at all supermarkets and other grocery stores, pharmacies, drug stores, convenience stores, food marts, and farmers markets and would place a ten (10) cent charge on the issuance of recyclable paper carryout bags by an affected store, as defined. The ordinance would also require a store to provide or make available to a customer recyclable paper carryout bags or reusable bags.	Long Beach passed this ordinance in May 2011. But unlike LAC, Long Beach did not issue a statement of overriding consideration for the likelihood of passing the GHG emission threshold of significance. The suit was settled after Long Beach agreed to adopt the County's Statement of Overriding Consideration in October 2011. Addendum to the County of Los Angeles Final EIR certified May 2011. The ordinance was also effective in larger stores starting August 2011, and will expand to others stores in 2012.
City of Los Angeles	The Los Angeles City Council voted to ban plastic carryout bags in the city's supermarkets and stores by July 2010 -- but only if the state fails to impose a 25-cent fee on every shopper who requests them.	Pending
City of Malibu	This ordinance bans the use of non-compostable and compostable plastic shopping bags for point-of-sale distribution.	Adopted May 2008 Effective November 2009
City of Manhattan Beach	This ordinance bans the distribution of plastic bags at the point-of-sale for all retail establishments in Manhattan Beach.	Adopted July 2008 The California Supreme Court ruled in favor of an appeal by the City of Manhattan Beach affirming the right of local governments to phase out plastic grocery bags without an EIR in July 2011.
City of Ojai	A proposed ordinance would ban plastic shopping bags and impose a 10-cent fee on paper bags at grocery stores, supermarkets, convenience stores, liquor stores and gasoline mini-marts.	Adopted April 2012. Effective July 1, 2012.
City of Palo Alto	This ordinance bans large grocery stores in Palo Alto from distributing single-use plastic check out bags. Only reusable bags (preferred) or paper bags can be	Adopted March 2009 Palo Alto's 2009 bag ban was challenged by the Save The Plastic Bag Coalition

**Table 3-1
 Adopted, Proposed and Pending Bag Ordinances in California**

Ordinance Location	Proposed Action	Status
	distributed. Single-use plastic bags can still be used in produce and meat departments. Pending expansion of the ordinance would apply the ban to all retailers including restaurants in the city. An EIR on the expanded ordinance will be prepared.	(STPBC). They settled out of court with the agreement that the City would not expand its ban to other stores without an EIR. Effective September 2009 Draft expansion ordinance and an EIR are pending.
City of Pasadena	This ordinance bans plastic bags, and imposes a 10 cent minimum price on paper bags.	Adopted November 2011 Effective July 1, 2012 for large stores and supermarkets and December 2012 for convenience stores.
City of San Francisco	Retail stores governed by the ordinance can only provide the following types of bags: a. compostable plastic b. recyclable paper c. reusable bag of any material Expanded to all retail and food establishments within the City and requires a minimum ten cent charge for reusable bags.	Adopted April 2007 In February 2012 San Francisco expanded its bag ban and was sued by the STPBC. The two causes of action are related to CEQA compliance and the bag ban for restaurants. There are currently no scheduled court dates.
City of San Jose	This ordinance prohibits the distribution of single-use carryout paper and plastic bags at the point of sale (i.e., check-out) for all commercial retail businesses in San José except restaurants. An exception is made for “green” paper bags containing at least 40 percent recycled content, accompanied by a charge of 10 cents to the customer, with the charge retained by the retailer. For the first two years, paper bags will be sold under this ordinance at 10 cents each; after two years the minimum price per paper bag is 25 cents each.	Adopted January 2011 Effective January 2012
City of Santa Monica	This ordinance: (1) prohibits retail establishments in Santa Monica from providing “single-use plastic carryout bags” to customers at the point of sale; (2) prohibits the free distribution of paper carryout bags by grocery stores, convenience stores, mini-marts, liquor stores and pharmacies; and (3) requires stores that make paper carryout bags available to sell recycled paper carryout bags to customers for not less than ten cents per bag.	Adopted January 2011 Effective September 2011
City of Sunnyvale	This ordinance prohibits specified retail	Adopted December 2011

**Table 3-1
Adopted, Proposed and Pending Bag Ordinances in California**

Ordinance Location	Proposed Action	Status
	establishments in Sunnyvale from providing single-use plastic carryout bags to customers at the point of sale, and creates a mandatory 10 cent (\$0.10) charge for each paper bag distributed by these stores.	Effective June 20, 2012 (grocery stores, convenience stores and large retailers) Effective March 2013 (all retailers)
County of Alameda	This ordinance prohibits the distribution of single-use carryout paper and plastic bags at the point of sale (i.e., check-out) for all commercial retail businesses in Alameda County. Exception would be made for recycled paper or reusable bags containing a specified minimum percentage of recycled content, which can only be provided to customers for a nominal charge (ten cents on or before January 1, 2015 and 25 cents on or after January 1, 2015) to cover the cost to the business of providing the bags. Ordinance will be implemented in unincorporated Alameda County as well as its 14 incorporated cities: Alameda City, Albany, Berkeley, Dublin, Emeryville, Fremont, Hayward, Livermore, Newark, Oakland, Piedmont, Pleasanton, San Leandro, and Union City.	Adopted January 2012 Effective January 1, 2013.
County of Los Angeles	This ordinance bans the issuance of plastic carryout bags and imposes a ten (10) cent charge on the issuance of recyclable paper carryout bags at all supermarkets and other grocery stores, pharmacies, drug stores, convenience stores, and foodmarts, in unincorporated Los Angeles County. The ordinance requires a store to provide or make available to a customer only recyclable paper carryout bags or reusable bags. The ordinance would also encourage a store to educate its staff to promote reusable bags and to post signs encouraging customers to use reusable bags in the unincorporated areas of the County of Los Angeles.	Adopted November 2010 In October 2011, Hilex and some individuals filed a petition to void the LA County ordinance. They alleged that the 10-cent charge on paper bags is really a local special tax that requires voter approval as amended by Prop 26. In March 2012, the Court denied the petition and ruled that a paper bag charge was not a tax under Prop 26. The decision is expected to be appealed.
County of Marin	This ordinance prohibits the distribution of plastic carryout bags and would charge at least \$0.05 for a recycled paper bag.	Adopted January 2011 In September 2011, Marin County Superior Court found the ordinance “a reasonable legislative and regulatory choice” to protect the environment without causing a significant negative impact. The

**Table 3-1
Adopted, Proposed and Pending Bag Ordinances in California**

Ordinance Location	Proposed Action	Status
		County had correctly determined the project to be exempt based on its actions to protect the environment and natural resources. STPBC filed an appeal of this decision on November 29, 2011 and the case is still pending.
County of San Luis Obispo (City and County of San Luis Obispo, Atascadero, Grover Beach, Morro Bay, Paso Robles, and Pismo Beach)	The San Luis Obispo County Integrated Waste Management Authority adopted a plastic bag ban with a 10 cent minimum price requirement on paper bags.	Adopted January 2012 It goes into effect on September 1, 2012 in all seven incorporated cities as well as unincorporated areas of the county. For the City of SLO: A petition was filed January 30, 2012. The SLO lawsuit had two causes of action, but the second cause was dropped in February. The first cause of action is CEQA compliance. Hearing date was scheduled for March 22 but is now being rescheduled.
County of Santa Clara	This ordinance allows affected retail establishments to distribute either a 'green' paper bag or a reusable bag. Reusable bags may be given away or sold and are initially defined (until January 2013) as bags made of cloth or other machine washable fabric that has handles; or a durable plastic bag with handles that is at least 2.25 mils thick and is specifically designed and manufactured for multiple use. 'Green' paper bags may be sold to customers for a minimum charge of \$0.15 and are defined as paper bags that are 100% recyclable and are made from 100% recycled material.	Adopted April 2011 Effective January 2012
County of Santa Cruz	The ordinance bans single-use plastic bags and places a 10 cent minimum price requirement on single-use paper bags throughout unincorporated county areas.	Adopted September 13, 2011 On-hold / pending some revisions to Ordinance
City of Millbrae	This ordinance bans single-use bags and free paper carryout bags and would apply to all retailers. Stores can charge a minimum of 10 cents per bag, should a customer need to purchase one. Those paper bags sold must be comprised of at least 40 percent post-consumer recycled materials. Thicker reusable plastic bags are allowed but would also need to be imprinted showing the bag is	Adopted January 2012. Certified a Negative Declaration. Effective September 1, 2012.

4.0 ENVIRONMENTAL IMPACT ANALYSIS

This section discusses the possible environmental effects of the Proposed Ordinance for the specific issue areas that were identified through the Initial Study and NOP process as having the potential to experience significant impacts. “Significant effect” is defined by the *CEQA Guidelines* §15382 as “a substantial, or potentially substantial, adverse change in any of the physical conditions within the area affected by the project including land, air, water, minerals, flora, fauna, ambient noise, and objects of historic or aesthetic significance. An economic or social change by itself shall not be considered a significant effect on the environment, but may be considered in determining whether the physical change is significant.”

The assessment of each issue area begins with a discussion of the setting relevant to that issue area. Following the setting is a discussion of the Proposed Ordinance’s impacts relative to the issue area. Within the impact analysis, the first subsection identifies the methodologies used and the “significance thresholds,” which are those criteria adopted by the County, other agencies, universally recognized, or developed specifically for this analysis to determine whether potential impacts are significant. The next subsection describes each impact of the Proposed Ordinance, mitigation measures for significant impacts, and the level of significance after mitigation. Each impact under consideration for an issue area is separately listed in bold text, with the discussion of the impact and its significance following. Each bolded impact listing also contains a statement of the significance determination for the environmental impact as follows:

Class I, Significant and Unavoidable: An impact that cannot be reduced to below the threshold level given reasonably available and feasible mitigation measures. Such an impact requires a Statement of Overriding Considerations to be issued if the project is approved.

Class II, Significant but Mitigable: An impact that can be reduced to below the threshold level given reasonably available and feasible mitigation measures. Such an impact requires findings to be made.

Class III, Not Significant: An impact that may be adverse, but does not exceed the threshold levels and does not require mitigation measures. However, mitigation measures that could further lessen the environmental effect may be suggested if readily available and easily achievable.

Class IV, Beneficial: An impact that would reduce existing environmental problems or hazards.

Following each environmental impact discussion is a listing of recommended mitigation measures (if required) and the residual effects or level of significance remaining after the implementation of the measures. In those cases where the mitigation measure for an impact could have a significant environmental impact in another issue area, this impact is discussed as a residual effect.

The impact analysis concludes with a discussion of cumulative effects, which evaluates the impacts associated with the Proposed Ordinance in conjunction with other adopted and pending bag ordinances.

This page intentionally left blank

4.1 AIR QUALITY

This section analyzes the Proposed Ordinance's long-term impacts to local and regional air quality. The analysis focuses on air quality impacts associated with bag manufacturing facilities and truck trips associated with bag distribution. Impacts related to global climate change are addressed in Section 4.3, *Greenhouse Gas Emissions*.

4.1.1 Setting

a. Characteristics of Air Pollutants. The County of San Mateo and the six cities in Santa Clara County are located within the San Francisco Bay Area Air Basin (Basin). The Bay Area Air Quality Management District (BAAQMD) is the regional government agency that monitors and regulates air pollution within the Basin. Pollutants that are monitored within both counties and compared to State and Federal Standards include ozone, carbon monoxide, nitrogen dioxide and suspended particulates. The general characteristics of these pollutants are described below.

Ozone. Ozone is produced by a photochemical reaction (triggered by sunlight) between nitrogen oxides (NO_x) and reactive organic gases (ROG). Nitrogen oxides are formed during the combustion of fuels, while reactive organic gases are formed during combustion and evaporation of organic solvents. Because ozone requires sunlight to form, it occurs in concentrations considered serious primarily between the months of April and October. Ozone is a pungent, colorless, toxic gas with direct health effects on humans, including respiratory and eye irritation and possible changes in lung functions. Groups most sensitive to ozone include children, the elderly, persons with respiratory disorders, and people who exercise strenuously outdoors.

Carbon Monoxide. Carbon monoxide (CO) is a colorless, odorless, poisonous gas that is found in high concentrations only near the source. The major source of CO is automobile traffic. Elevated concentrations, therefore, are usually only found near areas of high traffic volumes. CO's health effects are related to its affinity for hemoglobin in the blood. At high concentrations, CO reduces the amount of oxygen in the blood, causing heart difficulties in people with chronic diseases, reduced lung capacity and impaired mental abilities.

Nitrogen Dioxide. Nitrogen dioxide (NO₂) is a by-product of fuel combustion, with the primary source being motor vehicles and industrial boilers and furnaces. The principal form of nitrogen oxide produced by combustion is nitric oxide (NO), but NO reacts rapidly to form NO₂, creating the mixture of NO and NO₂ commonly called NO_x. NO₂ is an acute irritant. A relationship between NO₂ and chronic pulmonary fibrosis may exist, and an increase in bronchitis in young children at concentrations below 0.3 parts per million (ppm) may occur. NO₂ absorbs blue light and causes a reddish brown cast to the atmosphere and reduced visibility. It can also contribute to the formation of PM₁₀ and acid rain.

Suspended Particulates. PM₁₀ is particulate matter measuring no more than 10 microns in diameter, while PM_{2.5} is fine particulate matter measuring no more than 2.5 microns in diameter. Suspended particulates are mostly dust particles, nitrates and sulfates. Both PM₁₀ and PM_{2.5} are by-products of fuel combustion and wind erosion of soil and unpaved roads, and are

directly emitted into the atmosphere through these processes. Suspended particulates are also created in the atmosphere through chemical reactions.

The characteristics, sources, and potential health effects associated with the small particulates (those between 2.5 and 10 microns in diameter) and fine particulates (PM_{2.5}) can be very different. The small particulates generally come from windblown dust and dust kicked up from mobile sources. The fine particulates are generally associated with combustion processes as well as being formed in the atmosphere as a secondary pollutant through chemical reactions. Fine particulate matter is more likely to penetrate deeply into the lungs and poses a health threat to all groups, but particularly to the elderly, children, and those with respiratory problems. More than half of the small and fine particulate matter that is inhaled into the lungs remains there. These materials can damage health by interfering with the body's mechanisms for clearing the respiratory tract or by acting as carriers of an absorbed toxic substance.

b. Air Quality Standards. Federal and state standards have been established for six criteria pollutants: ozone (O₃), carbon monoxide (CO), nitrogen dioxide (NO₂), sulfur dioxide (SO₂), particulates less than 10 and 2.5 microns in diameter (PM₁₀ and PM_{2.5} respectively), and lead (Pb). California has also set standards for sulfates, hydrogen sulfide, vinyl chloride, and visibility-reducing particles. Table 4.1-1 lists the current federal and state standards for criteria pollutants.

Table 4.1-1
Current Federal and State Ambient Air Quality Standards

Pollutant	Federal Standard	California Standard
Ozone	0.075 ppm (8-hr avg)	0.09 ppm (1-hr avg) 0.07 ppm (8-hr avg)
Carbon Monoxide	9.0 ppm (8-hr avg) 35.0 ppm (1-hr avg)	9.0 ppm (8-hr avg) 20.0 ppm (1-hr avg)
Nitrogen Dioxide	53 ppb (annual avg) 100 ppb (1-hr avg)	0.030 ppm (annual avg) 0.18 ppm (1-hr avg)
Sulfur Dioxide	75 ppb (1-hr avg)	0.04 ppm (24-hr avg) 0.25 ppm (1-hr avg)
Lead	1.5 µg/m ³ (30 day avg)	1.5 µg/m ³ (calendar qtr) 0.15 µg/m ³ (rolling 3-month avg)
Particulate Matter (PM ₁₀)	150 µg/m ³ (24-hr avg)	20 µg/m ³ (annual avg) 50 µg/m ³ (24-hr avg)
Particulate Matter (PM _{2.5})	15 µg/m ³ (annual avg) 35 µg/m ³ (24-hr avg)	12 µg/m ³ (annual avg)

ppm= parts per million ppb= parts per billion µg/m³ = micrograms per cubic meter
Source: California Air Resources Board (2012), accessed online April 2012 at:
www.arb.ca.gov/research/aaqs/aaqs2.pdf

The BAAQMD is required to monitor air pollutant levels to ensure that air quality standards are met and, if they are not met, to develop strategies to meet the standards. Depending on

whether the standards are met or exceeded, the local air basin is classified as being in “attainment” or “non-attainment.”

c. Current Air Quality. The San Francisco Bay Area Air Basin monitoring station located in San Mateo County is the Redwood City monitoring station, located at 897 Barron Avenue in Redwood City. No PM₁₀ data is available from the Redwood City monitoring station; therefore, PM₁₀ data was taken from the Cupertino monitoring station, located at 22601 Voss Avenue in Cupertino, approximately 14 miles south of the Redwood City monitoring station. Table 4.1-2 indicates the number of days that each of the state and federal air quality standards has been exceeded at this station. As shown, the ozone concentration exceeded the state standard twice in 2010. The PM_{2.5} concentration exceeded federal standards on one day in 2010. There were no exceedances of either the state or federal standards for NO₂, PM₁₀ or CO from 2009 through 2011.

**Table 4.1-2
Ambient Air Quality Data**

Pollutant	2009	2010	2011
Ozone, ppm - Worst Hour	0.087	0.113	0.076
Number of days of State exceedances (>0.09 ppm)	0	2	0
Number of days of Federal exceedances (>0.12 ppm)	0	0	0
Carbon Monoxide, ppm - Worst 8 Hours	1.76	1.72	1.67
Number of days of State/Federal exceedances (>9.0 ppm)	0	0	0
Nitrogen Dioxide, ppm - Worst Hour	0.056	0.059	0.056
Number of days of State exceedances (>0.25 ppm)	0	0	0
Particulate Matter <10 microns, µg/m ³ Worst 24 Hours ^b	*	27.9	28.6
Number of samples of State exceedances (>50 µg/m ³)	0	0	0
Number of samples of Federal exceedances (>150 µg/m ³)	0	0	0
Particulate Matter <2.5 microns, µg/m ³ Worst 24 Hours	34.2	36.5	24.2
Number of samples of Federal exceedances (>35 µg/m ³)	0	1	0

*Insufficient data available to determine a value

d. Air Quality Management. Under state law, the BAAQMD is required to prepare a plan for air quality improvement for pollutants for which the District is in non-compliance. The Bay Area 2010 Clean Air Plan (CAP) provides a plan to improve Bay Area air quality and protect public health. The legal impetus for the CAP is to update the most recent ozone plan, the Bay Area 2005 Ozone Strategy, to comply with state air quality planning requirements as codified in the California Health & Safety Code. Although steady progress in reducing ozone levels in the Bay Area has been made, the region continues to be designated as non-attainment for both the one-hour and eight-hour state ozone standards. In addition, emissions of ozone

precursors in the Bay Area contribute to air quality problems in neighboring air basins. Under these circumstances, state law requires the CAP to include all feasible measures to reduce emissions of ozone precursors and reduce transport of ozone precursors to neighboring air basins (BAAQMD, September 2010).

The Bay Area was recently designated as non-attainment for the national 24-hour fine particulate matter (PM_{2.5}) standard, and the BAAQMD is required to prepare a PM_{2.5} State Implementation Plan (SIP) pursuant to federal air quality guidelines by December 2012. The 2010 CAP is not a SIP document and does not respond to federal requirements for PM_{2.5} or ozone planning. However, in anticipation of future PM_{2.5} planning requirements, the CAP control strategy also aims to reduce PM emissions and concentrations. In addition, U.S. Environmental Protection Agency (EPA) is currently reevaluating national ozone standards, and is likely to tighten those standards in the near future. The control measures in the CAP will also help in the Bay Area's continuing effort to attain national ozone standards (BAAQMD, September 2010).

e. Air Quality and Bags. Single-use bags can affect air quality in two ways: through emissions associated with manufacturing processes and through emissions associated with truck trips for the delivery of carryout bags to retailers. Each is summarized below.

Manufacturing Process. The manufacturing process to make carryout bags requires fuel and energy consumption, which generates air pollutant emissions. These may include particulate matter, nitrogen oxides, hydrocarbons, sulfur oxides, carbon monoxide, and odorous sulfur (Green Cities California MEA, 2010). The amount of emissions varies depending on the type and quantity of carryout bags produced. These emissions may contribute to air quality impacts related to acid rain (atmospheric acidification) or ground level ozone formation.

Although manufacturing facilities may emit air pollutants in the production of carryout bags, manufacturing facilities are subject to air quality regulations, as described below, that are intended to reduce emissions sufficiently to avoid violations of air quality standards. For this Program EIR, the analysis is focused on the Bay Area Air Basin, the air basin in which the Study Area is located.

Truck Trips. Delivery trucks that transport carryout bags from manufacturers or distributors to the local retailers in the Study Area also contribute air emissions locally and regionally. As discussed in the *Transportation* section of the Initial Study (see Appendix A), based on a baseline population estimate in the Study Area of approximately 1,041,302 persons in 2012 and a statewide estimate of approximately 531 plastic bags used per person per year, retail customers in the Study Area currently use an estimated 552,931,362 plastic bags per year. Assuming 2,080,000 plastic bags per truck load (City of Santa Monica Single-use Carryout Bag Ordinance Final EIR, January 2011; refer to Appendix A), approximately 266 annual truck trips (an average of about 0.7 trips per day) would be needed to deliver these carryout bags.

Diesel engines emit a complex mixture of air pollutants, composed of gaseous and solid material (ARB "Health Effects of Diesel Exhaust", 2012). The visible emissions in diesel exhaust are known as particulate matter or PM, which are small and readily respirable. The particles have hundreds of chemicals adsorbed onto their surfaces, including many known or suspected

mutagens and carcinogens. Diesel PM emissions are estimated to be responsible for about 70% of the total ambient air toxics risk. In addition to these general risks, diesel PM can also be responsible for elevated localized or near-source exposures (“hot-spots”) (ARB, Health Effects of Diesel Exhaust”, 2012).

Like manufacturing facilities, delivery trucks are also subject to existing regulations primarily related to diesel emissions, as described in Section f. *Regulations Applicable to Delivery Trucks*. These regulations are intended to reduce emissions associated with fuel combustion.

Ground Level Ozone and Atmospheric Acidification. Various studies have estimated air emissions for the different carryout bags (single-use plastic, paper or reusable bags) to determine a per bag emissions rate. In order to provide metrics to determine environmental impacts associated with the Proposed Ordinance, reasonable assumptions based upon the best available sources of information have been established and are utilized in this Program EIR. Specific metrics that compare impacts on a per bag basis are available for single-use plastic, single-use paper and low-density polyethylene (LDPE) reusable bags. Air pollutant emissions associated with the manufacturing and transportation of one single-use paper bag result in 1.9 times the impact on atmospheric acidification as air pollutant emissions associated with one single-use plastic bag. Similarly, on a per bag basis, a reusable carryout bag that is made of LDPE plastic would result in 3 times the atmospheric acidification compared to a single-use plastic bag if the LDPE bag is only used one time. In addition, on a per bag basis, a single-use paper bag has 1.3 times the impact on ground level ozone formation of a single-use plastic bag. Finally, a reusable carryout bag that is made of LDPE plastic and only used one time would result in 1.4 times the ground level ozone formation of a single-use plastic bag (Stephen L. Joseph, 2010; Ecobilan, 2004; FRIDGE, 2002; and Green Cities California MEA, 2010, City of Santa Monica Single-use Carryout Bag Ordinance Final EIR, January 2011).

The above statistics use the LDPE carryout bag as a representation of reusable bags in evaluating air quality impacts. There is no known available Life Cycle Assessment that evaluates all types of reusable bags (canvas, cotton, calico, etc.) with respect to potential air pollutant emissions. However, the emissions from all types of reusable bags are lower than single-use plastic and paper carryout bags because reusable bags are usually used at least one year, or 52¹ uses. Thus, the air pollutant emissions from these bags are expected to be comparable to the LDPE bag or lower.

Table 4.1-3 lists the emissions contributing to ground level ozone and atmospheric acidification using the per-bag impact rates discussed above and the estimated number of existing single-use paper and plastic bags used in the Study Area. As shown in Table 4.1-3, the manufacturing and transportation of single-use plastic bags currently used in the Study Area each year generates an estimated 12,717 kilograms (kg) of emissions associated with ground level ozone and 599,378 kg of emissions associated with atmospheric acidification.

¹ This represents a conservative estimate. According to the March 2010 MEA on Single-use and Reusable Bags, reusable bags may be used 100 times or more.

**Table 4.1-3
Current Emissions from Ground Level Ozone and
Atmospheric Acidification (AA) from Carryout Bags
In the Study Area¹**

Bag Type	# of Bags Used per Year	Ozone Emission Rate per Bag*	Ozone Emissions (kg) per 1,000 bags**	Ozone Emissions per year (kg)	AA Emission Rate per Bag*	AA Emissions (kg) per 1,000 bags***	AA Emissions per year (kg)
Single-use Plastic	552,931,362	1.0	0.023	12,717.42	1.0	1.084	599,377.6
Total				12,717	Total		599,378

¹ See Appendix B for listing of emissions by each participating municipality.

f. Regulations applicable to Manufacturing Facilities.

EPA Title V Permit. Title V is a federal program designed to standardize air quality permits and the permitting process for major sources of emissions across the country. The name "Title V" comes from Title V of the 1990 federal Clean Air Act Amendments, which requires the EPA to establish a national, operating permit program. Accordingly, EPA adopted regulations [Title 40 of the Code of Federal Regulations, Chapter 1, Part 70 (Part 70)], which require states and local permitting authorities to develop and submit a federally enforceable operating permit programs for EPA approval. Title V only applies to "major sources." EPA defines a major source as a facility that emits, or has the potential to emit (PTE) any criteria pollutant or hazardous air pollutant (HAP) at levels equal to or greater than the Major Source Thresholds (MST). The MST for criteria pollutants may vary depending on the attainment status (e.g. marginal, serious, extreme) of the geographic area and the Criteria Pollutant or HAP in which the facility is located (EPA Title V, December 2008). Carryout bag manufacturing facilities that emit any criteria pollutant or HAP at levels equal to or greater than the MST of the local air quality management district would need to obtain, and maintain compliance with, a Title V permit.

Local Air Quality Management District Equipment Permits. Manufacturing facilities may also be required to obtain permits from the local air quality management district. A local air quality management district permit is a written authorization to build, install, alter, replace, or operate equipment that emits or controls the emission of air contaminants, such as NO_x, CO, PM₁₀, oxides of sulfur (SO_x), or toxics. Permits ensure that emission controls meet the need for the local region to make steady progress toward achieving and maintaining federal and state air quality standards.

The BAAQMD, the local air quality management district serving the Study Area, requires operators that plan to build, install, alter, replace, or operate any equipment that emits or controls the emission of air contaminants to apply for, obtain and maintain equipment permits. Equipment permits ensure operators make steady progress toward achieving and maintaining federal and state air quality standards (as shown in Table 4.1-1). Permits also ensure proper operation of control devices, establish recordkeeping and reporting mechanisms, limit toxic emissions, and control dust or odors. In addition, the BAAQMD routinely inspects operating facilities to verify that equipment operates in compliance with BAAQMD rules and regulations.

Regulations applicable to Delivery Trucks.

On-Road Heavy-Duty Diesel Vehicles (In-Use) Regulation. On December 12, 2008, the ARB approved a new regulation to reduce emissions from existing on-road diesel vehicles operating in California. The regulation requires affected trucks and buses to meet performance requirements. Heavier trucks were required to be retrofitted with PM filters beginning January 1, 2012, and older trucks must be replaced starting January 1, 2015. By January 1, 2023 all vehicles must have a 2010 model year engine or equivalent. The regulation is intended to reduce emissions of diesel PM, oxides of nitrogen and other criteria pollutants (ARB "Truck and Bus Regulation, Updated March 22, 2012). All trucks making deliveries of carryout bags in California will be required to adhere to this regulation.

Diesel-Fueled Commercial Motor Vehicle Idling Limit. The regulation applies to diesel-fueled commercial motor vehicles that operate in the State of California with gross vehicular weight ratings of greater than 10,000 pounds that are or must be licensed for operation on highways. The in-use truck requirements require operators of both in-state and out-of-state registered sleeper berth equipped trucks to manually shut down their engines when idling more than five minutes at any location within California beginning in 2008 (ARB "Heavy-Duty Vehicle Idling Emission Reduction Program", updated March 2009). The purpose of this airborne toxic control measure is to reduce public exposure to diesel particulate matter and other air contaminants by limiting the idling of diesel-fueled commercial motor vehicles. All trucks making deliveries in the Study Area are required to comply with the no-idling requirements.

4.1.2 Impact Analysis

a. Methodology and Significance Thresholds. The proposed Single Use Bag Ban Ordinance does not include any physical development or construction related activities; therefore, the analysis focuses on emissions related to carryout bag manufacturing processes and truck trips associated with delivering carryout bags to Study Area retailers. Operational emissions associated with truck trips to deliver carryout bags to Study Area retailers were calculated using the using the URBEMIS 2007 v. 9.2.4 computer program (Rimpo and Associates, 2007). The estimate of operational emissions by URBEMIS includes truck trips (assumed to be heavy trucks - 33,000 to 60,000 pounds) and utilizes trip generation rates based on the increase in truck trips resulting from implementation of the Proposed Ordinance.

According the County of San Mateo CEQA Checklist, The Proposed Ordinance would create a significant air quality impact if it would:

1. *Generate pollutants (hydrocarbon, thermal odor, dust or smoke particulates, radiation, etc.) that will violate existing standards of air quality on-site or in the surrounding area; and/or*
2. *Involve the burning of any material, including brush, trees and construction materials.*

The Initial Study (see Appendix A) concluded that only the first criteria could be applicable to the project potentially resulting in a significant impact, while the Proposed Ordinance would result in no impact with respect to burning of any material. Hence, only the first criteria is addressed in this section.

On March 5, 2012 the Alameda County Superior Court issued a judgment finding that the BAAQMD had failed to comply with CEQA when it adopted the thresholds contained in the BAAQMD's 2010 CEQA Guidelines (BAAQMD Homepage, accessed May 2012). As such, lead agencies need to determine appropriate air quality thresholds of significance based on substantial evidence in the record. Lead agencies may rely on the BAAQMD's CEQA Guidelines (updated May 2011) for assistance in calculating air pollution emissions, obtaining information regarding the health impacts of air pollutants, and identifying potential mitigation measures. However, the BAAQMD has been ordered to set aside the thresholds and is no longer recommending that these thresholds be used as a general measure of a project's significant air quality impacts. Lead agencies may continue to rely on the Air District's 1999 Thresholds of Significance and to make determinations regarding the significance of an individual project's air quality impacts based on substantial evidence in the record for that project.

For this Program EIR, the County of San Mateo has determined that the BAAQMD's significance thresholds in the updated May 2011 CEQA Guidelines for project operations within the San Francisco Bay Area Air Basin are the most appropriate thresholds for use to determine air quality impacts of the Proposed Ordinance. First, these thresholds have been utilized in another County of San Mateo CEQA document (e.g., Clos De La Tech Winery Project EIR, 2010). In addition, these thresholds are lower than the 1999 BAAQMD thresholds, and thus use of the thresholds in the May 2011 CEQA Guidelines is more conservative. Therefore, these thresholds are considered reasonable for use in this Program EIR. The Proposed Ordinance would result in a significant impact if emissions would exceed any of the following thresholds:

- *54 pounds per day of ROG*
- *54 pounds per day of NO_x*
- *82 pounds per day of PM₁₀*
- *54 pounds per day of PM_{2.5}*

b. Project Impacts and Mitigation Measures.

Impact AQ-1 **With a shift toward reusable bags, the Proposed Ordinance is expected to substantially reduce the number of single-use carryout bags, thereby reducing the total number of bags manufactured and the overall air pollutant emissions associated with bag manufacture, transportation and use.**

Therefore, air quality impacts related to alteration of processing activities would be Class IV, *beneficial*.

The intent of the Proposed Ordinance is to reduce the number of single-use plastic bags in trash loads, reduce the environmental impacts related to single-use plastic carryout bags, deter the use of paper bags, and promote the use of reusable bags by retail customers. The Proposed Ordinance would reduce the number of single-use carryout bags that are manufactured and used in the Study Area and increase the number of recycled paper and reusable bags manufactured and used in the Study Area compared to existing conditions.

As described in the *Setting*, on a per bag basis emissions associated with single-use paper bag production and transportation is equivalent to 1.9 times the impact on atmospheric acidification as the production and transportation of a single-use plastic bag. On a per bag basis, the production and transportation of a reusable carryout bag that is made of LDPE plastic results in three times the atmospheric acidification of the production and transportation of a single-use plastic bag. Reusable bags may be made of various materials other than LDPE, including cloths such as cotton or canvas. However, because LDPE reusable bags are one of the most common types of reusable bags and are of similar durability and weight (approximately 50 to 200 grams) as other types of reusable bags, this Program EIR utilizes the best available information regarding specific metrics on a per bag basis to disclose environmental impacts associated with the Proposed Ordinance. However, the emissions from all types of reusable bags are lower than single-use plastic and paper carryout bags because reusable bags are usually used at least one year, or 52² uses. Thus, the air pollutant emissions from the production and transportation of these bags are expected to be comparable to the LPDE bag or lower (Santa Clara County Single-Use Carryout Bag Initial Study, October 2010). Similarly, on a per bag basis, the production and transportation of a single-use paper bag has 1.3 times the impact on ground level ozone formation compared to the production and transportation of a single-use plastic bag and the production and transportation of a reusable carryout bag that is made of LDPE plastic would result in 1.4 times the ground level ozone formation compared to the production and transportation of a single-use plastic bag (Stephen L. Joseph, 2010; FRIDGE, 2002; and Green Cities California MEA, 2010).

A reusable bag results in greater impacts to ground level ozone formation and atmospheric acidification than a single-use plastic bag on a per bag production and transportation basis; however, unlike single-use plastic bags, reusable carryout bags are intended to be used multiple times (estimated to be at least 52 uses).³ Therefore, fewer total carryout bags would need to be manufactured as a shift toward the use of reusable bags occurs. As described in Section 2.0, *Project Description*, retail establishments making paper carryout bags available would be required to sell recycled paper carryout bags that are made with a minimum 40% post-consumer recycled content to customers for \$0.10 per bag (\$0.25 per bag on or after January 1, 2015). This mandatory charge would create a disincentive to customers to request single-use paper bags when shopping at regulated stores and is intended to promote a shift toward the use of reusable bags by consumers in the Study Area.

² This represents a conservative estimate. According to the March 2010 *MEA on Single-use and Reusable Bags*, reusable bags may be used 100 times or more.

³ For the purposes of this analysis, it is assumed that reusable bags would be used once per week for a year, or 52 times, before being replaced.

This analysis assumes that as a result of the Proposed Ordinance 95% of the volume of plastic bags currently used in the Study Area (552,931,362 plastic bags per year) would be replaced by recycled paper bags (approximately 30%) and reusable bags (approximately 65%), as shown in Table 4.1-4. It is assumed that 5% of the existing single-use plastic bags used in the Study Area would remain in use since the Proposed Ordinance does not apply to some retailers who distribute single-use plastic bags (e.g., restaurants) and these retailers would continue to distribute single-use plastic bags after the Proposed Ordinance is implemented. Thus, for this analysis, it is assumed that 27,646,568 plastic bags would continue to be used annually within the Study Area after implementation of the Proposed Ordinance. It is also assumed that approximately 165,879,409 paper bags would replace approximately 30% of the plastic bags currently used in Study Area. This 1:1 replacement ratio is considered conservative, because the volume of a single-use paper carryout bag (20.48 liters) is generally equal to approximately 150% of the volume of a single-use plastic bag (14 liters), such that fewer paper bags would ultimately be needed to carry the same number of items.

**Table 4.1-4
Existing Plastic Bag Replacement Assumptions
in the Study Area**

Type of Bag	Replacement Assumption	Bags used Post-Ordinance	Explanation
Single-use Plastic	5% (remaining)	27,646,568	Because the Proposed Ordinance does not apply to all retailers (e.g. restaurants), some single-use plastic bags would remain in circulation.
Single-use Paper	30% ¹	165,879,409	Although the volume of a single-use paper carryout bag is generally 150% of the volume of a single-use plastic bag, such that fewer paper bags would be needed to carry the same number of items, it is conservatively assumed that paper would replace plastic at a 1:1 ratio.
Reusable	65% ¹	6,911,642	Although a reusable bag is designed to be used up to hundreds of times (Green Cities California MEA, 2010; Santa Monica Single-Use Carryout Bag Ordinance Final EIR, 2011), it is conservatively assumed that a reusable bag would be used by a customer once per week for one year, or 52 times.
Total		200,437,619	

¹ Rates utilized in the City of San Jose Final EIR, SCH # 2009102095, October 2010. See Appendix F for full Bag Reductions for each individual municipality.

In order to estimate the number of reusable carryout bags that would replace 359,405,485 plastic bags (65% of the existing number of plastic bags used annually in the Study Area), it is assumed that a reusable carryout bag would be used by a customer once per week for one year (52 times). This is a conservative estimate as a reusable bag, as required by the Proposed Ordinance, must have the capability of being used 125 times (see Appendix D for complete Draft Ordinance). Based on the estimate of 52 uses, 359,405,485 single-use plastic bags that would be removed as a result of the Proposed Ordinance would be replaced by 6,911,642 reusable bags. This amounts to about six reusable bags per person per year based on a Study Area population

of 1,041,302. This analysis assumes that as a result of the Proposed Ordinance the approximately 552 million single-use plastic carryout bags currently used in the Study Area annually would be reduced to approximately 200 million total bags as a result of the Proposed Ordinance.

It should be noted that no known manufacturing facilities of carryout bags are located within San Mateo or Santa Clara Counties and thus likely occur outside the the San Francisco Bay Area Air Basin. Nevertheless, for a conservative estimate, emissions associated with both manufacturing and transportation of carryout bags to retailers within the Study Area is estimated in this Program EIR. Table 4.1-5 estimates post-ordinance air pollutant emissions from bag manufacturing and transportation that contribute to the development of ground level ozone and atmospheric acidification. As shown, the increased use of reusable carryout bags in the Study Area would reduce emissions that contribute to ground level ozone by approximately 6,884 kg per year (a 54% decrease) and would reduce emissions that contribute to atmospheric acidification by approximately 205,220 kg per year (a 34% decrease).

**Table 4.1-5
Estimated Emissions that Contribute to Ground Level Ozone and
Atmospheric Acidification (AA) from Carryout Bags in Study Area¹**

* Refer to Table 4.1-4.

**Impact rate per bag as stated in Stephen L. Joseph, 2009; Ecobilan, 2004; FRIDGE, 2002; and Green Cities California MEA, 2010; Santa Monica Single-use Carryout Bag Ordinance Final EIR, January 2011.

*** Emissions per 1,000 bags from Ecobilan, 2004; Santa Monica Single-use Carryout Bag Ordinance Final EIR, January 2011.

**** Emissions per 1,000 bags from FRIDGE, 2002 and Green Cities California MEA, 2010; Santa Monica Single-use Carryout Bag Ordinance Final EIR, January 2011.

¹ See Appendix B for emissions for each individual municipality

As discussed in the *Setting*, air pollutant emissions from manufacturing facilities are regulated under the Clean Air Act and would be subject to requirements by the local air quality management district (the BAAQMD). Both paper bag manufacturing facilities and reusable carryout bag manufacturing facilities that emit any criteria pollutant or hazardous air pollutant (HAP) at levels equal to or greater than the Major Source Thresholds (MST) of the local air quality management district would need to obtain and maintain compliance with a Title V permit. Adherence to permit requirements would ensure that a manufacturing facility would not violate any air quality standard. Manufacturing facilities would also be required to obtain equipment permits for emission sources through the local air quality management district which ensures that equipment is operated and maintained in a manner that limits air emissions in the region. Compliance with applicable regulations would ensure that manufacturing facilities would not generate emissions conflicting with or obstructing implementation of the applicable air quality plan, violate any air quality standard or contribute substantially to an existing or projected air quality violation or result in a cumulatively considerable net increase of any criteria pollutant.

As described above, the Proposed Ordinance would reduce emissions associated with ozone and atmospheric acidification. Therefore, the Proposed Ordinance would have a beneficial effect in this regard.

Mitigation Measures. Mitigation is not necessary as impacts would be beneficial.

Significance After Mitigation. The impact would be beneficial without mitigation.

Impact AQ-2 **With an expected increase in the use of recyclable paper bags, the Proposed Ordinance would generate air pollutant emissions associated with an incremental increase in truck trips to deliver recycled paper and reusable carryout bags to local retailers. However, emissions would not exceed BAAQMD operational significance thresholds. Therefore, operational air quality impacts would be Class III, less than significant.**

Post Ordinance, long-term would include those emissions associated with truck trips to deliver carryout bags (recycled paper and reusable) from manufacturing facilities or distributors to the Study Area retailers. The URBEMIS computer program was used to calculate mobile emissions resulting from the number of trips generated by the Proposed Ordinance. Trip generation rates were taken from the traffic analysis contained in the *Transportation* section of the Initial Study (see Appendix A), which estimates that the change in truck traffic as a result of the Proposed Ordinance would be a net increase of 1.57 truck trips per day. Mobile emissions associated with such truck trips are summarized in Table 4.1-6.

**Table 4.1-6
Operational Emissions Associated with Truck Delivery Trips
Generated by the Proposed Ordinance**

Emission Source	Emissions (lbs/day)			
	ROG	NO _x	PM ₁₀	PM _{2.5}
Mobile Emissions (Truck Traffic)	0.02	0.23	0.03	0.01
Total Emissions	0.02	0.23	0.03	0.01
<i>BAAQMD Thresholds</i>	<i>54</i>	<i>54</i>	<i>82</i>	<i>54</i>
Threshold Exceeded?	No	No	No	No

Source: URBEMIS version 9.2.4 calculations for Truck Trips. See Appendix B for calculations

As indicated in Table 4.1-6, daily ROG emissions are estimated at 0.02 pounds, daily NO_x emissions are estimated at approximately 0.23 pounds, daily PM₁₀ emissions would be approximately 0.03 pounds, and daily PM_{2.5} emissions would be approximately 0.01 pounds. The incremental increases in ROG, NO_x, PM₁₀, and PM_{2.5} emissions associated with the truck deliveries would be substantially less than the BAAQMD thresholds of 54 pounds per day of ROG, NO_x, or PM_{2.5}, and 82 pounds per day of PM₁₀. Moreover, the increase in truck trips to deliver recyclable paper and reusable bags would be at least partially offset by a reduction in trips to deliver single use plastic bags. Nevertheless, because long-term emissions would not exceed BAAQMD thresholds, impacts would not be significant.

Mitigation Measures. Operational emissions associated with the increase in truck traffic as a result of the Proposed Ordinance would not exceed BAAQMD thresholds. Therefore, mitigation is not required.

Significance after Mitigation. Impacts would be less than significant without mitigation.

c. Cumulative Impacts. Adopted and pending carryout bag ordinances, as described in Table 3-1 in Section 3.0, *Environmental Setting*, would continue to reduce the amount of single-use carryout bags, and promote a shift toward reusable carryout bags. Similar to the Proposed Ordinance, such ordinances would be expected to generally reduce the overall number of bags manufactured and associated air pollutant emissions, while existing and future manufacturing facilities would continue to be subject to federal and state air pollution regulations (see the *Setting* for discussion of applicable regulations). Similar to the Proposed Ordinance, other adopted and pending ordinances would also be expected to incrementally change the number of truck trips associated with carryout bag delivery and associated emissions. Ten other agencies in San Francisco Bay Area region (City of Millbrae, City of Fairfax, County of Santa Clara, City of San Jose, City of Sunnyvale, County of Santa Cruz, Marin County, City of San Francisco, Alameda County, and the City of Palo Alto) have either adopted or are considering such ordinances. However, based on the incremental increase in air pollutant emissions

associated with the Proposed Ordinance (increase of $\frac{1}{4}$ pound per day or less of each criteria pollutant), the other ordinances are not expected to generate a cumulative increase in emissions that would exceed BAAQMD thresholds or adversely affect regional air quality. Moreover, the increase in truck trips to deliver reusable bags would be at least partially offset by a reduction in trips to deliver single use plastic bags. Therefore, cumulative air quality impacts would not be significant.

4.2 BIOLOGICAL RESOURCES

This section analyzes the Proposed Ordinance's impacts to biological resources. Both direct impacts associated with the Proposed Ordinance and indirect impacts to off-site biological resources are addressed.

4.2.1 Setting

a. Terrestrial Habitat.

The Proposed Ordinance would apply to the unincorporated areas of San Mateo County, as well as 18 participating municipalities within the County and 6 participating municipalities in Santa Clara County. The County of San Mateo is bounded to the west by the Pacific Ocean and to the east by the San Francisco Bay. There are 34 separate watersheds in the County, of which 22 drain into the Pacific Ocean and 12 drain into San Francisco Bay (County of San Mateo General Plan, November 1986). Encompassing more than 1,300 square miles in the southern portion of the San Francisco Bay Area, Santa Clara County is geomorphologically diverse and includes the Santa Clara Valley, the Santa Cruz Mountains, the mountains of the Diablo Range, and the Baylands.

The Study Area is home to an abundance of vegetative types, with a diverse number of plant species. The vegetative types found in the Study Area can be categorized as coastal shoreline, coastal marine, salt marsh, freshwater marsh, coastal scrub, chaparral, grassland, woodland-savanna, mixed evergreen forest, coniferous forest, and streambank vegetation (County of San Mateo General Plan, November 1986; County of Santa Clara General Plan, 1994). Fish, wildlife and vegetative habitats, dependent on water resources in the Study Area include:

- Open waters, mud flats, tidelands, and salt ponds in the San Francisco Bay
- Various Bayland habitats
- Coastal water habitats such as reefs, channels and tide pools which extend seaward from the intertidal zone to San Mateo County's three-mile oceanic limit
- Freshwater streams
- Freshwater lakes, reservoirs and ponds
- Riparian drainages and freshwater habitats

b. Special Status Species.

Fish and wildlife resources are numerous and diverse due to the wide variety of habitats contained in San Mateo County including drainages, the Pacific Ocean and San Francisco Bay. Similarly, Santa Clara County contains many distinct types of habitat, supporting a variety of plant and animal species, some of which are threatened or endangered by extinction (County of Santa Clara General Plan, December 1994). Several special status plant and animal species are known to occur within the marine and nearshore environment throughout San Mateo and Santa Clara Counties and have the potential to occur if suitable habitat is present. These include western pond turtle (*Actinemys marmorata*), western snowy plover (*Charadrius alexandrinus*), salt marsh harvest mouse (*Reithrodontomys raviventris*), steelhead (*Oncorhynchus mykiss irideus*), alkali milk-vetch (*Astragalus tener*), and California seablite (*Suaeda californica*). Furthermore,

Northern Coastal Salt Marsh, a sensitive natural community, has been documented along the shore of San Francisco Bay.

While the coastal and marine habitats of the Pacific Ocean and San Francisco Bay have been altered due to human disturbance, a number of additional sensitive species have the potential to occur in these environments. Sensitive species that may inhabit the coastal and marine environment are listed in Table 4.2-1 on the following page. The locations of special-status species and natural communities documented in the Study Area, as listed on the California Natural Diversity Database (CNDDDB), are mapped on Figures 4.2-1a and 4.2-1b.

c. Carryout Bags and Biological Resources. Carryout bags can affect biological resources as a result of litter that enters the storm drain system and ultimately coastal and marine environments.

Single-use plastic carryout bags enter the biological environment primarily as litter. This can adversely affect terrestrial animal species, and marine species that ingest the plastic bags (or the residue of plastic bags) or become tangled in the bag (Green Cities California MEA, 2010). Based on the data collected for the Ocean Conservancy's Report from September 2009 Ocean Conservancy's International Coastal Cleanup Day, approximately 11% of total debris items collected were plastic bags (Ocean Conservancy, April 2010). Over 260 species of wildlife, including invertebrates, turtles, fish, seabirds and mammals, have been reported to ingest or become entangled in plastic debris. Ingestion or entanglement may result in impaired movement and feeding, reduced productivity, lacerations, ulcers, and death (Laist, 1997; Derraik and Gregory, 2009). Ingested plastic bags affect wildlife by clogging animal throats and causing choking, filling animal stomachs so that they cannot consume real food, and infecting animals with toxins from the plastic (Green Cities California MEA, 2010). In addition to affecting wildlife through physical entanglement and ingestion, plastic debris in the marine environment has been known to absorb and transport polychlorinated biphenyls (PCBs), phthalates, and certain classes of persistent organic pollutants (POPs) (Mato, Y., Isobe, T., Takada, H., et al., 2001; and, Moore, C.J.; Lattin, G.L., A.F. Zellers., 2005).

Single-use paper carryout bags are also released into the environment as litter. However, they generally have less impact on wildlife because they are not as resistant to breakdown as is plastic; therefore, they are less likely to cause entanglement. In addition, although not a healthy food source, if single-use paper bags are ingested, they can be chewed effectively and may be digested by many animals.

Reusable bags can also be released into the environment as litter. However, because of the weight and sturdiness of these bags, reusable bags are less likely to be littered or carried from landfills by wind as litter compared to single-use plastic and paper bags (Green Cities California MEA, 2010). In addition, since reusable bags can be used up to 52 times, reusable bags would be disposed of less often than single-use carryout bags. As such, reusable bags are less likely to enter the marine environment as litter, when compared to single-use plastic or paper bags.

**Table 4.2-1
Coastal/Marine Special-Status Species**

Scientific Name	Common Name	Current Federal/State Status
Reptiles		
<i>Masticophis lateralis euryxanthus</i>	Alameda whipsnake	FT/ST
<i>Chelonia mydas</i>	Green sea turtle	FT
<i>Dermochelys coriacea</i>	Leatherback sea turtle	FE
<i>Lepidochelys olivacea</i>	Olive Ridley sea turtle	FT
<i>Emys marmorata</i>	Western pond turtle	-/SSC
<i>Thamnophis sirtalis tetrataenia</i>	San Francisco garter snake	FE/SE
Amphibians		
<i>Rana draytonii</i>	California red-legged frog	FT/SCC
<i>Ambystoma californiense</i>	California tiger salamander	FT
Birds		
<i>Asio otus</i>	Long-eared owl	-/SSC
<i>Charadrius alexandrinus nivosus</i>	Western Snowy plover	FT/SSC
<i>Sternula antillarum browni</i>	California least tern	FE/SE
<i>Athene cunicularia</i>	Burrowing owl	-/SSC
<i>Pelecanus occidentalis californicus</i>	Brown pelican	FE/delisted
<i>Brachyramphus marmoratus</i>	Marbled murrelet	FT
<i>Rallus longirostris obsoletus</i>	California clapper rail	FE
Fish		
<i>Oncorhynchus kisutch</i>	Coho salmon	FE/SE
<i>Oncorhynchus mykiss irideus</i>	Steelhead	FT/-
Mammals		
<i>Eumetopias jubatus</i>	Stellar sea-lion	FT/MMPA
<i>Arctocephalus townsendi</i>	Guadalupe fur seal	FT/MMPA
<i>Enhydra lutris nereis</i>	Southern Sea otter	FT/MMPA
<i>Balaenoptera musculus</i>	Blue whale	FE/MMPA
<i>Balaenoptera physalus</i>	Finback whale	FE/MMPA

**Table 4.2-1
Coastal/Marine Special-Status Species**

Scientific Name	Common Name	Current Federal/State Status
<i>Eubalaena glacialis</i>	Right whale	FE/MMPA
<i>Balaenoptera borealis</i>	Sei whale	FE/MMPA
<i>Physeter catodon</i>	Sperm whale	FE/MMPA

FT = Federally Threatened

SSC = California Species of Special Concern

FE = Federally Endangered

SE = California Endangered

ST= California Threatened

MMPA = Protected by the Marine Mammal Protection Act

- = no status but included in Rarefind database as deserving of concern

d. Regulatory Setting. Regulatory authority over biological resources is shared by federal, state, and local authorities under a variety of statutes and guidelines. Primary authority for general biological resources lies within the land use control and planning authority of local jurisdictions. The California Department of Fish and Game (CDFG) is a trustee agency for biological resources throughout the state under CEQA and also has direct jurisdiction under the California Fish and Game Code (CFGC). Under the State and Federal Endangered Species Acts, the CDFG and the U.S. Fish and Wildlife Service (USFWS) also have direct regulatory authority over species formally listed as Threatened or Endangered. The U.S. Department of Army Corps of Engineers (USACE) has regulatory authority over specific biological resources, namely wetlands and waters of the United States, under Section 404 of the federal Clean Water Act (CWA). The USACE also has jurisdiction over rivers and harbors through Section 10 of the CWA. Waters of the State fall under the jurisdiction of the CDFG through the CFGC and the Regional Water Quality Control Board (RWQCB) through Section 401 of the CWA. The RWQCB also has jurisdiction over isolated waters and wetlands through the Porter-Cologne Water Quality Control Act.

Plants or animals have “special-status” due to declining populations, vulnerability to habitat change, or restricted distributions. Special-status species are classified in a variety of ways, both formally (e.g. State or Federally Threatened and Endangered Species) and informally (“Special Animals”). The USFWS and the National Marine Fisheries Service (NMFS) share responsibility for implementation of the federal Endangered Species Act, with the USFWS focused on terrestrial and freshwater species and the NMFS focused on marine species. The USFWS is also responsible for regulation of bird species listed under the Migratory Bird Treaty Act (MBTA) (16 United States Code [USC] Section 703-711) and the Bald and Golden Eagle Protection Act (16 USC Section 668).

The CDFG protects a wide variety of special status species through the CFGC. Under the CFGC, species may be formally listed and protected as Threatened or Endangered through the California Endangered Species Act (Fish and Game Code Section 2050 *et. seq.*). The CFGC also protects Fully Protected species, California Species of Special Concern (CSC), all native bird species (Fish and Game Code sections 3503, 3503.5, and 3511), and rare plants under the Native Plant Protection Act (Fish and Game Code Section 1900 *et seq.*).

Sensitive Animals and Natural Communities

Figure 4.2-2

4.2.2 Impact Analysis

a. Methodology and Significance Thresholds. Chapter 1, Section 21001(c) of CEQA states that it is the policy of the state of California to: “Prevent the elimination of fish and wildlife species due to man’s activities, ensure that fish and wildlife populations do not drop below self-perpetuating levels, and preserve for future generations representations of all plant and animal communities.” Environmental impacts relative to biological resources may be assessed using impact significance criteria encompassing checklist questions from the *CEQA Guidelines* and federal, state, and local plans, regulations, and ordinances. Project impacts to flora and fauna may be determined to be significant even if they do not directly affect rare, threatened, or endangered species.

The Proposed Ordinance would create a significant impact to biological resources if it would:

1. *Affect federal or state listed rare or endangered species of plant life in the project area*
2. *Involve cutting of heritage or significant trees as defined in the County Heritage Tree and Significant Tree Ordinance*
3. *Be adjacent to or include a habitat food source, water source, nesting place or breeding place for a federal or state listed rare or endangered wildlife species*
4. *Significantly affect fish, wildlife, reptiles, or plant life*
5. *Be located inside or within 200 feet of a marine or wildlife reserve*
6. *Infringe on any sensitive habitats*
7. *Involve clearing of land that is 5,000 sq. ft. or greater (1,000 sq. ft. within a County Scenic Corridor), that has slopes greater than 20% or that is in a sensitive habitat or buffer zone*

The Initial Study (see Appendix A) concluded that the third, fourth and sixth criteria could potentially result in a significant impact, while the Proposed Ordinance would result in no impact with respect to the first, second, fifth, and seventh criteria. Hence, the third, fourth and sixth criteria (direct and indirect impacts to sensitive species and/or their habitat) are addressed in Impact BIO-1.

b. Project Impacts and Mitigation Measures.

Impact BIO-1 **Although the Proposed Ordinance would incrementally increase the number of recycled paper and reusable bags within the Study Area, the reduction in the amount of single-use plastic bags would be expected to reduce the overall amount of litter entering the coastal and bay habitat, thus reducing litter-related impacts to sensitive wildlife species and sensitive habitats. This is a Class IV, beneficial, effect.**

The Proposed Ordinance would not include any physical activities that would result in direct biological impacts. The Proposed Ordinance would regulate the use of paper and plastic single-use carryout bags within the Study Area, which includes unincorporated San Mateo County and 24 cities in San Mateo and Santa Clara Counties (see the Project Location list in Section 2.0, *Project Description*). The intent of the Proposed Ordinance is to reduce the environmental impacts related to the use of single-use plastic bags, and to promote a shift toward the use of reusable bags. It is anticipated that by prohibiting single-use plastic carryout bags and

requiring a mandatory charge for each paper bag distributed by retailers, the Proposed Ordinance would provide a disincentive to customers to request paper bags when shopping at regulated stores and promote a shift to the use of reusable bags by retail customers, while reducing the number of single-use plastic and paper bags within the Study Area.

All carryout bags, including single-use plastic, paper, and reusable bags, have the potential to affect coastal habitats, such as the San Francisco Bay and Pacific Ocean, when improper disposal of bags occurs. These bags can become litter that enters the storm drain system and ultimately enters into coastal and marine environments. As described in the *Setting*, litter that enters coastal habitats can adversely affect sensitive species that inhabit coastal and marine environments, including sea turtles, seals, whales, otters, or bird species as a result of ingestion or entanglement. However, each type of carryout bag's potential to become litter varies and is based on the number of bags disposed of as well as the bag's weight and material.

As described in Section 2.0, *Project Description*, typical single-use plastic carryout bags are made from petroleum or bio-based plastic (typically made of thin, lightweight high density polyethylene (HDPE)), are less than 2.25 mils (0.00225 inches) thick, and weigh approximately five to nine grams. Post-use from a retail store, a customer may reuse a single-use plastic bag at home, but eventually the bags are disposed of in the landfill, recycling facility, or discarded as litter. Although some recycling facilities handle plastic bags, most reject them because they can get caught in the machinery and cause malfunctioning, or are contaminated after use. Only about 5% of the plastic bags in California are currently recycled (US EPA, 2005; Green Cities California MEA, 2010; and Boustead, 2007). The majority of single-use plastic bags end in a landfill or as litter. Even those collected by recycling and solid waste trucks and handled at transfer stations and landfills may blow away as litter due to their light weight (Green Cities California MEA, 2010). Single-use plastic bags that become litter can enter storm drains and watersheds from surface water runoff or may be blown directly into the ocean or bay by the wind.

As described in the *Setting*, when single-use plastic bags enter coastal habitats marine species can ingest them (or the residue of plastic bags) or may become entangled in the bag (Green Cities California MEA, 2010). Ingestion or entanglement in single-use plastic bags can result in choking, reduced productivity, lacerations, ulcers, and death to sensitive species in the marine environment, including sea turtles, seals, whales, otters, or bird species.

Single-use paper carryout bags also have the potential to enter the marine environment as litter. Paper grocery bags are typically produced from kraft paper and weigh anywhere from 50 to 100 grams, depending on whether or not the bag includes handles (AEA Technology, 2009). A paper bag weighs substantially more (by approximately 40 to 90 grams) than single-use plastic bags. Because of their weight and recyclability, single-use paper bags are less likely to become litter compared to single-use plastic bags (Green Cities California MEA, 2010). In addition, because single-use paper bags are not as resistant to biodegradation, there would be less risk of entanglement if paper bags enter the marine environment compared to single-use plastic bags. In addition, although not a healthy food source, if ingested, a single-use paper bag can be chewed effectively and may be digested by many marine animals (Green Cities California MEA, 2010). Thus, although single-use paper bag litter may enter coastal habitats and affect sensitive species in the marine environment, the impacts would be less than those of single-use plastic bags.

Reusable bags may also become litter and enter the marine environment; however, these bags differ from the single-use bags in their weight and longevity. Reusable bags can be made from plastic or a variety of cloths such as vinyl or cotton. Built to withstand many uses, reusable bags weigh at least ten times what an HDPE plastic bag weighs and two times what a paper bag weighs, therefore restricting the movement by wind (ExcelPlas Australia, 2004; City of Pasadena, 2008). Reusable bags are typically reused until worn out through washing or multiple uses, and then typically disposed either in the landfill or recycling facility. Because of the weight and sturdiness of these bags, reusable bags are less likely to become litter or to be carried from landfills by wind compared to single-use plastic and paper bags (Green Cities California MEA, 2010). In addition, since reusable bags can be used 100 times or more (Green Cities California MEA, 2010), they would be disposed of less often than single-use carryout bags. As such, reusable bags are less likely to enter the marine environment as litter and would generally be expected to result in fewer impacts to sensitive species than single-use plastic or paper carryout bags.

The Proposed Ordinance would reduce plastic bag usage by approximately 95% compared to existing conditions (from approximately 552 million to approximately 27 million bags annually), and would reduce total bag use by approximately 64% (to approximately 200 million plastic, single-use paper, and reusable bags). This reduction in bags would be expected to generally reduce litter-related impacts to sensitive species. Therefore sensitive species such as sea turtles, mammals, and bird species would benefit from the Proposed Ordinance, which would reduce the amount of litter which could enter the marine environment. Impacts would be beneficial.

Mitigation Measures. As the impact would be beneficial, no mitigation is required.

Significance After Mitigation. Impacts to sensitive species as a result of the proposed ordinance would be beneficial without mitigation.

c. Cumulative Impacts. Adopted and pending carryout bag ordinances, as described in Table 3-1 in Section 3.0, *Environmental Setting*, would continue to reduce the amount of single-use carryout bags, and promote a shift toward reusable carryout bags. This shift would generally have beneficial effects with respect to sensitive biological resources. Ten other agencies in the San Francisco Bay Area region (City of Millbrae, City of Fairfax, County of Santa Clara, City of San Jose, City of Sunnyvale, County of Santa Cruz, Marin County, City of San Francisco, Alameda County, and the City of Palo Alto) have either adopted or are considering such ordinances. Similar to the Proposed Ordinance, these other adopted and pending ordinances could incrementally reduce the number of plastic bags entering the environment, including San Francisco Bay, as litter. These other ordinances would be expected to have similar beneficial effects. Therefore, there would be no significant adverse cumulative impacts to biological resources.

4.3 GREENHOUSE GAS EMISSIONS

This section analyzes the Proposed Ordinance's impacts related to climate change. The analysis focuses on manufacturing, transportation and disposal of carryout bags as these are the largest contributors to greenhouse gas emissions.

4.3.1 Setting

a. Climate Change and Greenhouse Gases. Climate change is the observed increase in the average temperature of the Earth's atmosphere and oceans along with other substantial changes in climate (such as wind patterns, precipitation, and storms) over an extended period of time. The term "climate change" is often used interchangeably with the term "global warming," but "climate change" is preferred to "global warming" because it helps convey that there are other changes in addition to rising temperatures. The baseline against which these changes are measured originates in historical records identifying temperature changes that have occurred in the past, such as during previous ice ages. The global climate is continuously changing, as evidenced by repeated episodes of substantial warming and cooling documented in the geologic record. The rate of change has typically been incremental, with warming or cooling trends occurring over the course of thousands of years. The past 10,000 years have been marked by a period of incremental warming, as glaciers have steadily retreated across the globe. However, scientists have observed acceleration in the rate of warming during the past 150 years. Per the United Nations Intergovernmental Panel on Climate Change (IPCC, 2007), the understanding of anthropogenic warming and cooling influences on climate has led to a high confidence (90% or greater chance) that the global average net effect of human activities since 1750 has been one of warming. The prevailing scientific opinion on climate change is that most of the observed increase in global average temperatures, since the mid-20th century, is likely due to the observed increase in anthropogenic GHG concentrations (IPCC, 2007).

Gases that absorb and re-emit infrared radiation in the atmosphere are called greenhouse gases (GHGs). GHGs are present in the atmosphere naturally, are released by natural sources, or are formed from secondary reactions taking place in the atmosphere. The gases that are widely seen as the principal contributors to human-induced climate change include carbon dioxide (CO₂), methane (CH₄), nitrous oxides (N₂O), fluorinated gases such as hydrofluorocarbons (HFCs) and perfluorocarbons (PFCs), and sulfur hexafluoride (SF₆). Water vapor is excluded from the list of GHGs because it is short-lived in the atmosphere and its atmospheric concentrations are largely determined by natural processes, such as oceanic evaporation.

Of these gases, CO₂ and CH₄ are emitted in the greatest quantities from human activities. Emissions of CO₂ are largely by-products of fossil fuel combustion, whereas CH₄ results from off-gassing associated with agricultural practices and landfills. Man-made GHGs, many of which have greater heat-absorption potential than CO₂, include fluorinated gases and sulfur hexafluoride (SF₆) (California Environmental Protection Agency [CalEPA], 2006). Different types of GHGs have varying global warming potentials (GWPs). The GWP of a GHG is the potential of a gas or aerosol to trap heat in the atmosphere over a specified timescale (generally, 100 years). Because GHGs absorb different amounts of heat, a common reference gas (CO₂) is used to relate the amount of heat absorbed to the amount of the gas emissions, referred to as "carbon dioxide equivalent" (CO₂E), and is the amount of a GHG emitted multiplied by its GWP. CO₂ has a GWP of one. By

contrast, CH₄ has a GWP of 21, meaning its global warming effect is 21 times greater than carbon dioxide on a molecule per molecule basis (IPCC, 1997).

The accumulation of GHGs in the atmosphere regulates the earth's temperature. Without the natural heat trapping effect of GHG, Earth's surface would be about 34° C cooler (CalEPA, 2006). However, it is believed that emissions from human activities, particularly the consumption of fossil fuels for electricity production and transportation, have elevated the concentration of these gases in the atmosphere beyond the level of naturally occurring concentrations. The following discusses the primary GHGs of concern.

Carbon Dioxide. The global carbon cycle is made up of large carbon flows and reservoirs. Billions of tons of carbon in the form of CO₂ are absorbed by oceans and living biomass (i.e., sinks) and are emitted to the atmosphere annually through natural processes (i.e., sources). When in equilibrium, carbon fluxes among these various reservoirs are roughly balanced (United States Environmental Protection Agency [USEPA], April 2011). CO₂ was the first GHG demonstrated to be increasing in atmospheric concentration, with the first conclusive measurements being made in the last half of the 20th Century. Concentrations of CO₂ in the atmosphere have risen approximately 40% since the industrial revolution. The global atmospheric concentration of CO₂ has increased from a pre-industrial value of about 280 parts per million (ppm) to 391 ppm in 2011 (IPCC, 2007; Oceanic and Atmospheric Association [NOAA], 2010). The average annual CO₂ concentration growth rate was larger during the last 10 years (1995–2005 average: 1.9 ppm per year) than it has been since the beginning of continuous direct atmospheric measurements (1960–2005 average: 1.4 ppm per year), although there is year-to-year variability in growth rates (NOAA, 2010). Currently, CO₂ represents an estimated 82.7% of total GHG emissions (Department of Energy [DOE] Energy Information Administration [EIA], December 2008). The largest source of CO₂, and of overall GHG emissions, is fossil fuel combustion.

Methane. CH₄ is an effective absorber of radiation, though its atmospheric concentration is less than that of CO₂ and its lifetime in the atmosphere is limited to 10 to 12 years. It has a global warming potential (GWP) approximately 21 times that of CO₂. Over the last 250 years, the concentration of CH₄ in the atmosphere has increased by 148% (IPCC, 2007), although emissions have declined from 1990 levels. Anthropogenic sources of CH₄ include enteric fermentation associated with domestic livestock, landfills, natural gas and petroleum systems, agricultural activities, coal mining, wastewater treatment, stationary and mobile combustion, and certain industrial processes (USEPA, April 2011).

Nitrous Oxide. Concentrations of nitrous oxide (N₂O) began to rise at the beginning of the industrial revolution and continue to increase at a relatively uniform growth rate (NOAA, 2010). N₂O is produced by microbial processes in soil and water, including those reactions that occur in fertilizers that contain nitrogen, fossil fuel combustion, and other chemical processes. Use of these fertilizers has increased over the last century. Agricultural soil management and mobile source fossil fuel combustion are the major sources of N₂O emissions. N₂O's GWP is approximately 310 times that of CO₂.

Fluorinated Gases (HFCS, PFCS and SF₆). Fluorinated gases, such as hydrofluorocarbons (HFCs), perfluorocarbons (PFCs), and SF₆, are powerful GHGs that are emitted from a variety of industrial processes. Fluorinated gases are used as substitutes for ozone-depleting substances such

as chlorofluorocarbons (CFCs), hydrochlorofluorocarbons (HCFCs), and halons, which have been regulated since the mid-1980s because of their ozone-destroying potential and are phased out under the Montreal Protocol (1987) and Clean Air Act Amendments of 1990. Electrical transmission and distribution systems account for most SF₆ emissions, while PFC emissions result from semiconductor manufacturing and as a by-product of primary aluminum production. Fluorinated gases are typically emitted in smaller quantities than CO₂, CH₄, and N₂O, but these compounds have much higher GWPs. SF₆ is the most potent GHG the IPCC has evaluated.

State Greenhouse Gas Inventory. Worldwide anthropogenic emissions of GHG were approximately 40,000 million metric tons (MMT) CO₂E in 2004, including ongoing emissions from industrial and agricultural sources, but excluding emissions from land use changes (i.e., deforestation, biomass decay) (IPCC, 2007). CO₂ emissions from fossil fuel use accounts for 56.6% of the total emissions of 49,000 million metric tons CO₂E (includes land use changes) and all CO₂ emissions are 76.7% of the total. Methane emissions account for 14.3% of GHG and N₂O emissions account for 7.9% (IPCC, 2007).

Total U.S. GHG emissions were 6,633.2 million metric tons CO₂E in 2009 (USEPA, April 2011). While total U.S. emissions have increased by 7.3% from 1990 to 2009, emissions decreased from 2008 to 2009 by 427.9 million metric tons CO₂E, or 6.1% (DOE EIA, Table 12.1, August 2010). This decrease was primarily due to: (1) a decrease in economic output resulting in a decrease in energy consumption across all sectors; and (2) a decrease in the carbon intensity of fuels used to generate electricity due to fuel switching as the price of coal increased, and the price of natural gas decreased substantially. Since 1990, U.S. emissions have increased at an average annual rate of 0.4%. The transportation and industrial end-use sectors accounted for 33% and 26%, respectively, of CO₂ emissions from fossil fuel combustion in 2009. Meanwhile, the residential and commercial end-use sectors accounted for 22% and 19%, respectively, of CO₂ emissions from fossil fuel combustion in 2009 (USEPA, 2011).

Based upon the California Air Resources Board (ARB) *California Greenhouse Gas Inventory for 2000-2008* (<http://www.arb.ca.gov/cc/inventory/data/data.htm>), California produced 478 MMT CO₂E in 2008. The major source of GHG in California is transportation, contributing 36% of the state's total GHG emissions. Electricity generation is the second largest source, contributing 24% of the state's GHG emissions (ARB, June 2010). California emissions are due in part to its large size and large population compared to other states. Another factor that reduces California's per capita fuel use and GHG emissions, as compared to other states, is its relatively mild climate. ARB has projected statewide unregulated GHG emissions for the year 2020, which represent the emissions that would be expected to occur in the absence of any GHG reduction actions, will be 596 MMT CO₂E (ARB, 2007).

b. Effects of Climate Change. Globally, climate change has the potential to affect numerous environmental resources through potential impacts related to future air temperatures and precipitation patterns. Scientific modeling predicts that continued GHG emissions at or above current rates would induce more extreme climate changes during the 21st century than were observed during the 20th century. Scientists have projected that the average global surface temperature could rise by 1.0-4.5°F (0.6-2.5°C) in the next 50 years, and the increase may be as high as 2.2-10°F (1.4-5.8°C) in the next century. In addition to these projections, there are

identifiable signs that global warming is currently taking place, including substantial ice loss in the Arctic (IPCC, 2007).

According to the CalEPA's 2010 Climate Action Team Biennial Report, potential impacts of climate change in California may include loss in snow pack, sea level rise, more extreme heat days per year, more high ozone days, more large forest fires, and more drought years (CalEPA, April 2010). Below is a summary of some of the potential effects that could be experienced in California as a result of climate change.

Sea Level Rise. According to *The Impacts of Sea-Level Rise on the California Coast*, prepared by the California Climate Change Center (CCCC) (May 2009), climate change has the potential to induce substantial sea level rise in the coming century. The rising sea level increases the likelihood and risk of flooding. The study identifies a sea level rise on the California coast over the past century of approximately eight inches. Based on the results of various global climate change models, sea level rise is expected to continue. The California Climate Adaptation Strategy (December 2009) estimates a sea level rise of up to 55 inches by the end of this century.

Air Quality. Higher temperatures, which are conducive to air pollution formation, could worsen air quality in California. Climate change may increase the concentration of ground-level ozone, but the magnitude of the effect, and therefore its indirect effects, are uncertain. If higher temperatures are accompanied by drier conditions, the potential for large wildfires could increase, which, in turn, would further worsen air quality. However, if higher temperatures are accompanied by wetter, rather than drier conditions, the rains would tend to temporarily clear the air of particulate pollution and reduce the incidence of large wildfires, thereby ameliorating the pollution associated with wildfires. Additionally, severe heat accompanied by drier conditions and poor air quality could increase the number of heat-related deaths, illnesses, and asthma attacks throughout the state (CEC March, 2009).

Water Supply. Analysis of paleoclimatic data (such as tree-ring reconstructions of stream flow and precipitation) indicates a history of naturally and widely varying hydrologic conditions in California and the west, including a pattern of recurring and extended droughts. Uncertainty remains with respect to the overall impact of climate change on future water supplies in California. However, the average early spring snowpack in the Sierra Nevada decreased by about 10 percent during the last century, a loss of 1.5 million acre-feet of snowpack storage. During the same period, sea level rose eight inches along California's coast. California's temperature has risen 1°F, mostly at night and during the winter, with higher elevations experiencing the highest increase. Many Southern California cities have experienced their lowest recorded annual precipitation twice within the past decade. In a span of only two years, Los Angeles experienced both its driest and wettest years on record (California Department of Water Resources [DWR], 2008; CCCC, May 2009).

This uncertainty complicates the analysis of future water demand, especially where the relationship between climate change and its potential effect on water demand is not well understood. The Sierra snowpack provides the majority of California's water supply by accumulating snow during our wet winters and releasing it slowly when we need it during our dry springs and summers. Based upon historical data and modeling DWR projects that the Sierra snowpack will experience a 25 to 40 percent reduction from its historic average by 2050.

Climate change is also anticipated to bring warmer storms that result in less snowfall at lower elevations, reducing the total snowpack (DWR, 2008).

Hydrology. As discussed above, climate change could potentially affect: the amount of snowfall, rainfall, and snow pack; the intensity and frequency of storms; flood hydrographs (flash floods, rain or snow events, coincidental high tide and high runoff events); sea level rise and coastal flooding; coastal erosion; and the potential for salt water intrusion. Sea level rise may be a product of climate change through two main processes: expansion of sea water as the oceans warm and melting of ice over land. A rise in sea levels could result in coastal flooding and erosion and could jeopardize California's water supply due to salt water intrusion. Increased storm intensity and frequency could affect the ability of flood-control facilities, including levees, to handle storm events.

Agriculture. California has a \$30 billion agricultural industry that produces half of the country's fruits and vegetables. Higher CO₂ levels can stimulate plant production and increase plant water-use efficiency. However, if temperatures rise and drier conditions prevail, water demand could increase; crop-yield could be threatened by a less reliable water supply; and greater air pollution could render plants more susceptible to pest and disease outbreaks. In addition, temperature increases could change the time of year certain crops, such as wine grapes, bloom or ripen, and thereby affect their quality (CCCC, 2006).

Ecosystems and Wildlife. Climate change and the potential resulting changes in weather patterns could have ecological effects on a global and local scale. Increasing concentrations of GHGs are likely to accelerate the rate of climate change. Scientists project that the average global surface temperature could rise by 1.0-4.5°F (0.6-2.5°C) in the next 50 years, and 2.2-10°F (1.4-5.8°C) in the next century, with substantial regional variation. Soil moisture is likely to decline in many regions, and intense rainstorms are likely to become more frequent. Sea level could rise as much as two feet along most of the U.S. coast. Rising temperatures could have four major impacts on plants and animals: (1) timing of ecological events; (2) geographic range; (3) species' composition within communities; and (4) ecosystem processes, such as carbon cycling and storage (Parmesan, 2004; Parmesan, C. and H. Galbraith, 2004).

While the above-mentioned potential impacts identify the possible effects of climate change at a global and potentially statewide level, in general scientific modeling tools are currently unable to predict what impacts would occur locally with a similar degree of accuracy. In general, regional and local predictions are made based on downscaling statewide models (CEC, March 2009).

c. Greenhouse Gas Emissions from Carryout Bags. Carryout bags have the potential to contribute to the generation of GHGs either through emissions associated with manufacturing process, truck trips delivering carryout bags to retailers or through disposal during landfill degradation. Each is summarized below.

Manufacturing Process. The manufacturing process to make carryout bags requires fuel and energy consumption. This GHG emissions, including CO₂, CH₄, N₂O_x, fluorinated gases, and ozone. In addition, fertilizers that are used on crops for resources such as cotton or pulp, which are then utilized in the manufacture of carryout bags, also have the potential to emit N₂O_x. The

amount of GHG emissions varies depending on the type and quantity of carryout bags produced. Compared to truck trips and disposal, the manufacturing process is the largest emitter of GHGs due to the high volume of fuel and energy consumption that is used during the process.

Truck Trips. Delivery trucks that transport carryout bags from manufacturers or distributors to Study Area local retailers also create GHG emissions. GHG emissions from truck trips result primarily from the combustion of fossil fuels and include CO₂, CH₄, and N₂O. As discussed in the *Transportation* section of the Initial Study (see Appendix A), based on a baseline Study Area population of 1,041,302 persons in 2012 and a statewide estimate of approximately 531 plastic bags used per person per year, retail customers in the Study Area currently use an estimated 552,931,362 plastic bags per year. Assuming 2,080,000 plastic bags per truck load (City of Santa Monica Single-use Carryout Bag Ordinance Final EIR, January 2011; refer to Appendix A), this number of plastic bags would require approximately 266 truck trips per year (an average of about 0.7 trips per day) to deliver these single-use plastic bags in the Study Area.

Disposal/Degradation. Once disposed of by customers, carryout bags that are not recycled are deposited to a landfill where they are left to decompose and degrade. Depending on the type and materials used, a carryout bag will degrade at various rates. When carryout bag materials degrade in anaerobic conditions at a landfill, CH₄ is emitted. This contributes to climate change (Green Cities California MEA, 2010).

GHG Emission Rates per Bag. Various studies have estimated GHG emissions for the different carryout bags (single-use plastic, paper or reusable bags) to determine a per bag GHG emissions rate. The Boustead Report (2007) compared single-use plastic and paper carryout bags and assumed that one paper bag could carry the same quantity of groceries as 1.5 plastic bags. Based on the Boustead Report (2007), 1,500 single-use plastic bags would generate 0.04 metric tons of Carbon Dioxide Equivalent (CO₂E) as a result of manufacturing, transport, and disposal. Based on the Scottish Report (AEA Technology, 2005), GHG emissions associated with the manufacture, use, and disposal of a single-use paper bag are 3.3 times greater than the emissions generated by the manufacture, use and disposal of a single-use plastic bag. Thus, based on the single-use plastic bag GHG emissions rate of 0.04 metric tons CO₂E per 1,500 from the Boustead Report, single-use paper bags would emit 0.132 metric tons CO₂E per 1,000 bags ($0.04 \times 3.3 = 0.132$). If only used once, the manufacture, use and disposal of a reusable LDPE carryout bag results in 2.6 times the GHG emissions of a single-use HDPE plastic bag (AEA Technology, 2005). Therefore, reusable LDPE carryout bags would emit 0.104 metric tons CO₂E per 1,000 bags (if used only once) (Stephen L. Joseph, 2010; AEA Technology, 2005; Ecobilan, 2004; Green Cities California MEA, 2010; and, City of Santa Monica Single-use Carryout Bag Ordinance Final EIR, January 2011).

If used 20 times, a reusable LDPE carryout bag results in 10% the GHG emissions of a single-use HDPE plastic bag (AEA Technology, 2005). The analysis uses the above LDPE carryout bag as a representation of reusable bags in evaluating greenhouse gas impacts. There is no known available Life Cycle Assessment that evaluates all types of reusable bags (canvas, cotton, calico, etc.) with respect to potential GHG emissions. However, given the high rate of reuse by all

types of reusable bags (100 times or more¹), the GHG emissions associated with these bags, are expected to be comparable to an LPDE bag or lower.

Table 4.3-1 lists the current GHG emissions associated with the manufacture, transport, and disposal of single-use plastic bags in the Study Area using the per bag GHG emissions rates discussed above and the estimated number of carryout bags currently used. As discussed in Section 2.0, *Project Description*, based on a baseline population estimate of approximately 1,041,302 persons in 2012 and a statewide estimate of approximately 531 plastic bags used per person per year, retail customers in the Study Area currently use an estimated 552,931,362 single-use plastic bags per year. As shown in Table 4.3-1, overall GHG emissions associated with Study Area single-use plastic bag use are 14,745 metric tons CO₂E per year, or approximately 0.014 metric tons CO₂E per person.

**Table 4.3-1
Existing Greenhouse Gas Emissions
from Single-Use Plastic Bags in the Study Area**

Bag Type	Existing Number of Bags Used per Year	GHG Impact Rate per Bag	CO₂e (metric tons)	CO₂e per year (metric tons)	CO₂e per Person³
Single-use Plastic	552,931,362	1.0	0.04 per 1,500 bags**	14,745	0.014
Total				14,745	0.014

³ Emissions per person are divided by the current Study Area population – 1,041,302 (California Department of Finance, May 2012)

d. Regulatory Setting. The following regulations address both climate change and GHG emissions.

International and Federal Regulations. The United States is, and has been, a participant in the United Nations Framework Convention on Climate Change (UNFCCC) since it was produced by the United Nations in 1992. The objective of the treaty is "stabilization of greenhouse gas concentrations in the atmosphere at a level that would prevent dangerous anthropogenic interference with the climate system." This is generally understood to be achieved by stabilizing global GHG concentrations between 350 and 400 ppm, in order to limit the global average temperature increases between 2 and 2.4°C above pre-industrial levels (IPCC 2007). The UNFCCC itself does not set limits on GHG emissions for individual countries or

¹ Green Cities California. March 2010. *Master Environmental Assessment on Single-use and Reusable Bags*. Prepared by ICF International.

enforcement mechanisms. Instead, the treaty provides for updates, called “protocols,” that would identify mandatory emissions limits.

Five years later, the UNFCCC brought nations together again to draft the *Kyoto Protocol* (1997). The Protocol established commitments for industrialized nations to reduce their collective emissions of six GHGs (carbon dioxide, methane, nitrous oxide, sulfur hexafluoride, hydrofluorocarbons, and perfluorocarbons) to 5.2% below 1990 levels by 2012. The United States is a signatory of the Protocol, but Congress has not ratified it and the United States has not bound itself to the Protocol’s commitments (UNFCCC, 2007).

The United States is currently using a voluntary and incentive-based approach toward emissions reductions in lieu of the Kyoto Protocol’s mandatory framework. The Climate Change Technology Program (CCTP) is a multi-agency research and development coordination effort (led by the Secretaries of Energy and Commerce) that is charged with carrying out the President’s National Climate Change Technology Initiative (USEPA, December 2007).

The voluntary approach to address climate change and GHG emissions may be changing. The United States Supreme Court in *Massachusetts et al. v. Environmental Protection Agency et al.* ([2007] 549 U.S. 05-1120) held that the United States Environmental Protection Agency (EPA) has the authority to regulate motor-vehicle GHG emissions under the federal Clean Air Act.

California Regulations. Assembly Bill (AB) 1493 (2002), referred to as “Pavley,” requires ARB to develop and adopt regulations to achieve “the maximum feasible and cost-effective reduction of GHG emissions from motor vehicles.” On June 30, 2009, EPA granted the waiver of Clean Air Act preemption to California for its greenhouse gas emission standards for motor vehicles beginning with the 2009 model year. Pavley I took effect for model years starting in 2009 to 2016 and Pavley II, which is now referred to as “LEV (Low Emission Vehicle) III GHG” will cover 2017 to 2025. Fleet average emission standards would achieve a 22% reduction by 2012 and a 30% reduction by 2016.

In 2005, Governor Schwarzenegger issued Executive Order S-3-05, establishing statewide GHG emissions reduction targets. Executive Order (EO) S-3-05 provides that by 2010, emissions shall be reduced to 2000 levels; by 2020, emissions shall be reduced to 1990 levels; and by 2050, emissions shall be reduced to 80% of 1990 levels (CalEPA, 2006). In response to EO S-3-05, CalEPA created the Climate Action Team (CAT), which in March 2006 published the Climate Action Team Report (the “2006 CAT Report”) (CalEPA, 2006). The 2006 CAT Report identifies a recommended list of strategies that the state could pursue to reduce GHG emissions. These are strategies that could be implemented by various state agencies to ensure that the emission reduction targets in EO S-3-05 are met and can be met with existing authority of the state agencies. The strategies include the reduction of passenger and light duty truck emissions, the reduction of idling times for diesel trucks, an overhaul of shipping technology/infrastructure, increased use of alternative fuels, increased recycling, and landfill methane capture, etc.

California’s major initiative for reducing GHG emissions is outlined in Assembly Bill 32 (AB 32), the “California Global Warming Solutions Act of 2006,” signed into law in 2006. AB 32 codifies the Statewide goal of reducing GHG emissions to 1990 levels by 2020 (essentially a 15% reduction below 2005 emission levels; the same requirement as under S-3-05), and requires ARB to

prepare a Scoping Plan that outlines the main State strategies for reducing GHGs to meet the 2020 deadline. In addition, AB 32 requires ARB to adopt regulations to require reporting and verification of statewide GHG emissions.

After completing a comprehensive review and update process, the ARB approved a 1990 statewide GHG level and 2020 limit of 427 MMT CO₂E. The Scoping Plan was approved by ARB on December 11, 2008, and includes measures to address GHG emission reduction strategies related to energy efficiency, water use, and recycling and solid waste, among other measures. The Scoping Plan includes a range of GHG reduction actions that may include direct regulations, alternative compliance mechanisms, monetary and non-monetary incentives, voluntary actions, and market-based mechanisms.

Executive Order S-01-07 was enacted on January 18, 2007. The order mandates that a Low Carbon Fuel Standard ("LCFS") for transportation fuels be established for California to reduce the carbon intensity of California's transportation fuels by at least 10% by 2020.

Senate Bill (SB) 97, signed in August 2007, acknowledges that climate change is an environmental issue that requires analysis in CEQA documents. In March 2010, the California Resources Agency (Resources Agency) adopted amendments to the *CEQA Guidelines* for the feasible mitigation of GHG emissions or the effects of GHG emissions. The adopted guidelines give lead agencies the discretion to set quantitative or qualitative thresholds for the assessment and mitigation of GHGs and climate change impacts.

SB 375, signed in August 2008, enhances the State's ability to reach AB 32 goals by directing ARB to develop regional GHG emission reduction targets to be achieved from vehicles for 2020 and 2035. SB 375 directs each of the state's 18 major Metropolitan Planning Organizations (MPOs) to prepare a "sustainable communities strategy" (SCS) that contains a growth strategy to meet these emission targets for inclusion in the Regional Transportation Plan (RTP). On September 23, 2010, ARB adopted final regional targets for reducing GHG emissions from 2005 levels by 2020 and 2035. The Bay Area's SCS is currently under development titled "Plan Bay Area", which is due for adoption in April 2013. Consistent with the ARB's regional targets, the Bay Area is required to reduce emissions by 7 percent by 2020 and by 15 percent by 2035.

ARB Resolution 07-54 establishes 25,000 metric tons of GHG emissions as the threshold for identifying the largest stationary emission sources in California for purposes of requiring the annual reporting of emissions. This threshold is just over 0.005% of California's total 2004 GHG emissions inventory.

In April 2011, Governor Brown signed SB 2X requiring California to generate 33% of its electricity from renewable energy by 2020.

For more information on the Senate and Assembly bills, Executive Orders, and reports discussed above, and to view reports and research referenced above, please refer to the following websites: www.climatechange.ca.gov and <http://www.arb.ca.gov/cc/cc.htm>.

Local Regulations and CEQA Requirements. Pursuant to the requirements of SB 97, the Resources Agency has adopted amendments to the *CEQA Guidelines* for the feasible mitigation of

GHG emissions or the effects of GHG emissions. The adopted *CEQA Guidelines* provide general regulatory guidance on the analysis and mitigation of GHG emissions in CEQA documents, but contain no suggested thresholds of significance for GHG emissions. Instead, they give lead agencies the discretion to set quantitative or qualitative thresholds for the assessment and mitigation of GHGs and climate change impacts. The general approach to developing a threshold of significance for GHG emissions is to identify the emissions level for which a project would not be expected to substantially conflict with existing California legislation adopted to reduce statewide GHG emissions needed to move the state towards climate stabilization. If a project would generate GHG emissions above the threshold level, its contribution to cumulative impacts would be considered significant.

To date, the Bay Area Air Quality Management District (BAAQMD), the South Coast Air Quality Management District (SCAQMD), and the San Joaquin Air Pollution Control District (SJVAPCD) have adopted quantitative significance thresholds for GHGs. As noted in Section 4.1, *Air Quality*, on March 5, 2012 the Alameda County Superior Court issued a judgment finding that the BAAQMD had failed to comply with CEQA when it adopted the air quality and greenhouse gas emissions thresholds contained in the BAAQMD's CEQA Guidelines (Updated May 2011). The court did not determine whether the thresholds were valid on the merits, but found that the adoption of the thresholds was a project under CEQA and therefore determined that the BAAQMD was required to do CEQA analysis on the thresholds. In light of the court's order, lead agencies will need to determine appropriate air quality and GHG thresholds of significance based on substantial evidence in the record.

In the absence of other local GHG thresholds of significance, for this analysis, the Proposed Ordinance is evaluated based on a project-based threshold of 4.6 metric tons CO₂e per service population (defined to include both residents and employees) per year. The County of San Mateo does not recommend adoption of that threshold for any other purpose at this time, but it is used for this analysis for the following reasons. First, the 4.6 metric tons CO₂e per service population threshold was adopted by the BAAQMD as a quantitative GHG emissions threshold for project-level analysis (BAAQMD, "California Environmental Quality Act: Air Quality Guidelines" (June 2010)). This threshold has been utilized in certified CEQA documents for similar bag ordinances, including in the City of Sunnyvale (FEIR, SCH #2011062032, December 2011) which is also located in the BAAQMD and the City of Huntington Beach (Draft EIR, SCH #2011111053, February 2012) located in the SCAQMD.

Second, the BAAQMD derived the recommended "efficiency" metric from statewide compliance with AB 32. Other air pollution control districts have also recommended a similar "Efficiency Threshold". For example, the San Luis Obispo County Air Pollution Control District recommends a 4.8 metric tons per person per year Efficiency Threshold (SLO APCD, Greenhouse Gas Thresholds and Supporting Evidence, March 2012). Staff at the South Coast Air Quality Management District (SCAQMD) has proposed a project-level threshold of 4.8 metric tons CO₂e per service population (defined to include both residents and employees) per year for use in the South Coast region (SCAQMD, "Proposed Tier 4 Performance Standards: Option #3: SCAQMD Efficiency Target", September 2010 and personal communication Ian MacMillan, Program Supervisor - CEQA Intergovernmental Review, SCAQMD on December 29, 2011).

Based on the above, the 4.6 metric tons per person per year threshold was considered most reasonable for use in this Program EIR analysis.

4.3.2 Impact Analysis

a. Methodology and Significance Thresholds. Pursuant to the requirements of SB 97, the Resources Agency adopted amendments to the *CEQA Guidelines* for the feasible mitigation of GHG emissions or the effects of GHG emissions in March 2010. These guidelines are used in evaluating the cumulative significance of GHG emissions from the proposed project. According to the adopted *CEQA Guidelines*, impacts related to GHG emissions would be significant if the Proposed Ordinance would:

- *Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment; and/or*
- *Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases.*

The vast majority of individual projects do not generate sufficient GHG emissions to create a project-specific impact through a direct influence to climate change; therefore, the issue of climate change typically involves an analysis of whether a project's contribution towards an impact is cumulatively considerable. "Cumulatively considerable" means that the incremental effects of an individual project are significant when viewed in connection with the effects of past projects, other current projects, and probable future projects (CEQA Guidelines, Section 15355).

For future projects, the significance of GHG emissions may be evaluated based on locally adopted quantitative thresholds, or consistency with a regional GHG reduction plan (such as a Climate Action Plan). Although the County of San Mateo is in the process of developing an Energy Efficiency Climate Action Plan (EECAP) that would set GHG Reduction Targets, the EECAP is not yet finalized and has not been approved by the County Board of Supervisors at this time. Several Study Area municipalities also have adopted or pending GHG reduction plans. These include Belmont, Brisbane (pending), Burlingame, Daly City, Foster City, Menlo Park, Pacifica (pending), Redwood City (pending), San Carlos, San Mateo, South San Francisco (pending), Los Altos (pending), Milpitas (pending), and Mountain View. However, for this Program EIR, the Proposed Ordinance is evaluated based on the project-level threshold of 4.6 metric tons CO₂e per service population (defined to include both residents and employees) per year (BAAQMD, "California Environmental Quality Act: Air Quality Guidelines" (June 2010)).

A significant impact related to climate change would occur if GHG emissions associated with implementation of the Proposed Ordinance would exceed 4.6 metric tons of CO₂E units per service population (residents and employees) per year. In addition, impacts would be significant if the Proposed Ordinance would be inconsistent with any applicable GHG emissions reductions strategies such as the 2006 CAT Report or the 2008 Attorney General's Greenhouse Gas Reduction Measures.

b. Project Impacts and Mitigation Measures.

Impact GHG-1 **The Proposed Ordinance would increase the number of recyclable paper bags used in the Study Area. Implementation of the Proposed Ordinance would incrementally increase GHG emissions compared to existing conditions. However, emissions would not exceed thresholds of significance. Impacts would be Class III, less than significant.**

The intent of the Proposed Ordinance is to reduce the use of single-use carryout bags and promote the use of reusable bags by Study Area retail customers. As such, the Proposed Ordinance would reduce the number of single-use plastic carryout bags that are manufactured and increase the number of recyclable paper and reusable bags that are manufactured, transported, and disposed of within the Study Area.

As described in the *Setting*, through the manufacture, transport, and disposal, each single-use paper bag generates 3.3 times more GHG emissions than the manufacture, transport, and disposal of a single-use plastic bag. If only used once, the manufacture, use, and disposal of a reusable LDPE carryout bag results in 2.6 times the GHG emissions of a single-use HDPE plastic bag (Stephen L. Joseph, 2009; AEA Technology, 2005; Ecobilan, 2004; and Green Cities California MEA, 2010). Thus, on a per bag basis, single-use plastic bags have less impact than single-use paper and reusable carryout bags. However, reusable carryout bags are intended to be used multiple times. With reuse of carryout bags, the total carryout bags that would be manufactured, transported and disposed of would be reduced. As described in Section 4.1, *Air Quality*, implementation of the Proposed Ordinance would result in replacement of single-use plastic bags currently used in the Study Area (estimated at 552,931,362 million annually) with an estimated 165.8 million recyclable paper bags and approximately 7 million reusable bags; an estimated 27.6 million single-use plastic bags would remain in circulation (refer to Table 4.1-4). This represents a 95% reduction in single-use plastic bags and a 64% reduction in all types of carryout bags (including plastic, single-use paper, and reusable).

Table 4.3-2 provides an estimate of GHG emissions that would result from the change in the makeup of carryout bags in the Study Area resulting from implementation of the Proposed Ordinance. Although the total number of carryout bags would be reduced by approximately 352 million bags per year, the projected increase in the use of recyclable paper bags is expected to increase overall GHG emissions associated with the manufacture, transport, and disposal of carryout bags by approximately 0.006 CO₂E per person per year compared to current conditions.

**Table 4.3-2
Estimated Greenhouse Gas Emissions
from Carryout Bags in Study Area¹
with Implementation of the Proposed Ordinance**

Bag Type	Estimated Number of Bags Used per Year*	GHG Impact Rate per Bag	CO ₂ E (metric tons)	CO ₂ E per year (metric tons)	CO ₂ E per Person ³
Single-use Plastic	27,646,568	1.0	0.04 per 1,500 bags**	737	0.0007
Single-use Paper	165,879,409	2.97 ¹	0.1188 per 1,000 bags ¹	19,707	0.019
Reusable	6,911,642	2.6	0.104 per 1,000 bags***	719	0.00069
Total				21,163	0.020
Existing				14,745	0.014
Net Change (Total minus Existing)				6,418	0.006

CO₂E = Carbon Dioxide Equivalent units

* refer to Table 4.1-4 in Section 4.1, Air Quality.

¹ 10% reduction (from a rate of 3.3) based on Santa Clara County Negative Declaration, October 2010 based on Environmental Defense Fund's Paper Calculator.

** Based on Boustead Report, 2007; Santa Monica Single-use Carryout Bag Ordinance Final EIR, January 2011.

***Based on AEA Technology "Scottish Report, 2005; Santa Monica Single-use Carryout Bag Ordinance Final EIR, January 2011.

³ Emissions per person are divided by the existing population in the Study Area - 1,041,302 (Department of Finance May 2012)

¹ See Appendix B for emissions for each individual municipality

Implementation of the Proposed Ordinance would result in a net increase of approximately 0.006 metric tons CO₂E per person per year within the Study Area. However, both the increase in GHG emissions compared to existing conditions and the total emissions after implementation of the Proposed Ordinance would be less than 4.6 metric tons CO₂E per person per year. Impacts related to the GHG emissions would be less than significant.

Mitigation Measures. Mitigation is not required since the impact would not be significant.

Significance after Mitigation. Impacts would be less than significant without mitigation.

Impact GHG-2 **The Proposed Ordinance would not conflict with any applicable plan, policy or regulation of an agency adopted for the purpose of reducing the emissions of GHGs. Impacts would be Class III, less than significant.**

The Proposed Ordinance would be generally consistent with applicable regulations or plans addressing GHG reductions. As indicated above, the CAT published the Climate Action Team

Report (the “2006 CAT Report”) in March 2006. The CAT Report identifies a recommended list of strategies that the State could pursue to reduce climate change greenhouse gas emissions. The CAT strategies are recommended to reduce GHG emissions at a statewide level to meet the goals of the Executive Order S-3-05. These are strategies that could be implemented by various State agencies to ensure that the Governor’s targets are met and can be met with existing authority of the State agencies. In addition, in 2008 the California Attorney General published The California Environmental Quality Act Addressing Global Warming Impacts at the Local Agency Level (Office of the California Attorney General, Global Warming Measures Updated May 21, 2008). This document provides information that may be helpful to local agencies in carrying out their duties under CEQA as they relate to global warming. Included in this document are various measures that may reduce the global warming related impacts of a project. Tables 4.3-3 and 4.3-4 illustrate that the Proposed Ordinance would be consistent with both the GHG reduction strategies set forth by the 2006 CAT Report and the 2008 Attorney General’s Greenhouse Gas Reduction Measures.

**Table 4.3-3
Proposed Ordinance Consistency with Applicable Climate Action
Team Greenhouse Gas Emission Reduction Strategies**

Strategy	Project Consistency
California Air Resources Board	
Vehicle Climate Change Standards AB 1493 (Pavley) required the state to develop and adopt regulations that achieve the maximum feasible and cost-effective reduction of climate change emissions emitted by passenger vehicles and light duty trucks. Regulations were adopted by the ARB in September 2004.	Consistent The trucks that deliver carryout bags to and from the Study Area retailers on public roadways would be in compliance with ARB vehicle standards that are in effect at the time of vehicle purchase.
Diesel Anti-Idling The ARB adopted a measure to limit diesel-fueled commercial motor vehicle idling in July 2004.	Consistent Current State law restricts diesel truck idling to five minutes or less. Diesel trucks operating from and making deliveries to Study Area retailers are subject to this state-wide law.
Alternative Fuels: Biodiesel Blends ARB would develop regulations to require the use of 1 to 4% biodiesel displacement of California diesel fuel.	Consistent The diesel vehicles that deliver carryout bags to and from the Study Area on public roadways could utilize this fuel once it is commercially available.
Alternative Fuels: Ethanol Increased use of E-85 fuel.	Consistent Truck drivers delivering carryout bags could choose to purchase flex-fuel vehicles and utilize this fuel once it is commercially available regionally and locally.
Heavy-Duty Vehicle Emission Reduction Measures Increased efficiency in the design of heavy duty vehicles and an education program for the heavy duty vehicle sector.	Consistent The heavy-duty trucks that deliver carryout bags to and from Study Area retailers on public roadways would be subject to all applicable ARB efficiency standards that are in effect at the time of vehicle manufacture.
Achieve 50% Statewide Diversion Goal Achieving the State’s 50% waste diversion mandate as established by the Integrated Waste Management Act of	Consistent As of 2006, the County of San Mateo and each of the participating municipalities were diverting at least 50% of their

**Table 4.3-3
Proposed Ordinance Consistency with Applicable Climate Action
Team Greenhouse Gas Emission Reduction Strategies**

Strategy	Project Consistency
1989, (AB 939, Sher, Chapter 1095, Statutes of 1989), will reduce climate change emissions associated with energy intensive material extraction and production as well as methane emission from landfills. A diversion rate of 48% has been achieved on a statewide basis. Therefore, a 2% additional reduction is needed.	solid waste (CalRecycle, Jurisdiction Diversion/Disposal Rate Summary, Accessed May 2012), thereby complying with the standards established by AB 939. Any disposal of carryout bags would be required to adhere to the existing standards. The Proposed Ordinance would also assist by promoting reusable carryout bags, thus reducing the amount of solid waste generated in the form of single-use carryout bags.
Zero Waste – High Recycling Efforts to exceed the 50% mandate would allow for additional reductions in climate change emissions.	Consistent As described above, the County of San Mateo and each of the participating municipalities currently exceed the 50% goal of recycling. The Proposed Ordinance would assist by promoting reusable carryout bags, thus reducing the amount of solid waste generated in the form of single-use carryout bags. The ordinance would also shift single-use bag consumption from plastic to paper. This would increase recycling of single-use bags because paper bags are recycled by services provided to each residence and workplace in the Study Area. Consumer access to plastic bag recycling opportunities is limited.
Energy Commission (CEC)	
Fuel-Efficient Replacement Tires & Inflation Programs State legislation established a statewide program to encourage the production and use of more efficient tires.	Consistent Carryout bag delivery drivers could purchase tires for their vehicles that comply with state programs for increased fuel efficiency.
Alternative Fuels: Non-Petroleum Fuels Increasing the use of non-petroleum fuels in California's transportation sector, as recommended as recommended in the CEC's 2003 and 2005 Integrated Energy Policy Reports.	Consistent Carryout bag delivery drivers could purchase alternative fuel vehicles and utilize these fuels once they are commercially available regionally and locally.

**Table 4.3-4
Proposed Ordinance Consistency with Applicable
Attorney General Greenhouse Gas Reduction Measures**

Strategy	Project Consistency
Transportation-Related Emissions	
Diesel Anti-Idling Set specific limits on idling time for commercial vehicles, including delivery vehicles.	Consistent Currently, the ARB's Airborne Toxic Control Measure (ATCM) to Limit Diesel-Fueled Commercial Motor Vehicle Idling restricts diesel truck idling to five minutes or less. Diesel trucks delivering carryout bags to Study Area retailers are subject to this state-wide law.
Solid Waste and Energy Emissions	
Solid Waste Reduction Strategy Project construction shall require reuse and recycling of construction and demolition (C&D) waste.	Consistent As described above, the County of San Mateo and each of the participating municipalities exceed the 50% mandate and divert

Table 4.3-4
Proposed Ordinance Consistency with Applicable
Attorney General Greenhouse Gas Reduction Measures

<i>Strategy</i>	<i>Project Consistency</i>
	greater than 50% of solid waste. Single-use carryout bags make up a portion of C&D waste. The Proposed Ordinance would also assist by promoting reusable carryout bags, thus reducing the amount of C&D waste attributed to single-use carryout bags. Any disposal of carryout bags would be required to adhere to the existing standards.

The Proposed Ordinance would be consistent with the CAT strategies and measures suggested in the Attorney General’s Greenhouse Gas Reduction Report as discussed in tables 4.3-3 and 4.3-4. Therefore, the Proposed Ordinance would be consistent with the objectives of AB 32, SB 97, and SB 375. Impacts would be less than significant.

Mitigation Measures. Mitigation is not required since the impact would not be significant.

Significance after Mitigation. Impacts would be less than significant without mitigation.

c. Cumulative Impacts. Adopted and pending carryout bag ordinances, as described in Table 3-1 in Section 3.0, *Environmental Setting*, would continue to reduce the amount of single-use carryout bags, and promote a shift toward reusable carryout bags. Similar to the Proposed Ordinance, such ordinances would be expected to generally reduce the overall number of bags manufactured and associated GHG emissions. Similar to the Proposed Ordinance, other adopted and pending ordinances could incrementally change the GHG emissions associated with bag manufacturing, transportation and disposal. Ten other agencies in the San Francisco Bay Area region (City of Millbrae, City of Fairfax, County of Santa Clara, City of San Jose, City of Sunnyvale, County of Santa Cruz, Marin County, City of San Francisco, Alameda County, and the City of Palo Alto) have either adopted or are considering such ordinances. However, based on the incremental increase in per capita emissions, the other ordinances are not expected to generate a cumulative increase in GHG emissions. For these reasons, cumulative significant impacts associated with implementation of carryout bag ordinances throughout the state are not anticipated.

4.4 HYDROLOGY and WATER QUALITY

This section analyzes the Proposed Ordinance's potential to adversely affect hydrology and water quality.

4.4.1 Setting

Single-use bags are manufactured at various facilities, which may or may not be located in San Mateo County or Santa Clara County. Therefore, impacts to hydrology and water quality are not limited to the local watershed. However, for this analysis the local watershed and hydrologic conditions are discussed and used as an example of the types of effects that may occur as a result of the manufacturing and disposal of bags.

a. Surface Water Drainage and Single-use Bags.

Existing Hydrological Systems. Several creeks discharge to the San Francisco Bay including San Mateo Creek, Laurel Creek, and San Francisquito Creek (the border with Santa Clara County). The Santa Clara Basin also drains directly into San Francisco Bay. When the tide goes out, water in the San Francisco Bay moves into the Ocean. Therefore, trash in Bay Area creeks and rivers can ultimately end up in the Pacific Ocean.

There are 34 separate watersheds in the San Mateo County, of which 22 drain into the Pacific Ocean and 12 drain into San Francisco Bay (County of San Mateo General Plan, November 1986). The major basin in the San Mateo County, the San Mateo Basin, is part of the Santa Clara Valley Basin, a large, 580 square mile basin located in four counties in the San Francisco Bay area. The San Mateo County portion of the basin stretches from Daly City to Menlo Park, includes most of the Bayside cities and is drained by Redwood and San Francisquito Creeks. The Santa Clara Basin includes the portion of the Bay south of Dumbarton Bridge and the 840-square mile area of wetlands that drains into it (Santa Clara Basin Watershed Management Initiative, March 2003). It is bounded by the Dumbarton Bridge to the north, the crest of the Diablo Mountains to the east, and the crest of the Santa Cruz Mountains to the west and south. The Santa Clara Basin is comprised of 13 watersheds.

On the coast side of San Mateo County there are a number of significant coastal watershed areas, including San Pedro Creek, Pilarcitos Creek, San Gregorio Creek and Pescadero-Butano Creeks. San Gregorio Creek, Pescadero Creek and San Francisquito Creek are listed as impaired water bodies on the 303(d) list for sediment due to degradation of salmonid habitat. Urban runoff throughout the Study Area consists of stormwater runoff from rainfall as well as non-stormwater runoff from human activities (i.e. industrial and commercial facilities, over-irrigation of landscapes, vehicle washing, discharges from pools, spas, or water features, etc.).

Single-use Bags. Single-use bags that enter the storm drain system as litter may affect storm water flow by clogging drains and redirecting flow. As described in Section 4.2, *Biological Resources*, typical single-use plastic bags weigh approximately five to nine grams and are made of thin (less than 2.25 mils or 0.00225 inches thick) high density polyethylene (HDPE) (Hyder Consulting, 2007). Post-use from a retail establishment, a customer may reuse a single-use

plastic bag at home, but eventually the bags are disposed of in a landfill or recycling facility or discarded as litter. Although some recycling facilities handle plastic bags, most reject them because they get caught in the machinery and cause malfunctioning, or are contaminated after use. Only about 5% of the plastic bags in California are currently recycled (Green Cities California MEA, 2010; and Boustead, 2007). The majority of single-use plastic bags end up as litter or in the landfill. Even those collected by recycling and solid waste trucks and handled at transfer stations and landfills may blow away as litter due to their light weight (Green Cities California MEA, 2010). Single-use plastic bags that become litter can enter storm drains and may clog catch basins or be transported to the local watershed, San Francisco Bay, or the Pacific Ocean.

Single-use paper grocery bags also have the potential to enter the storm drains as litter. However, as described in Section 4.2, *Biological Resources*, because of their weight and recyclability, single-use paper bags are less likely to become litter compared to single-use plastic bags (Green Cities California MEA, 2010). In addition, because single-use paper bags are not as resistant to biodegradation, there is less potential to clog catch basins compared to single-use plastic bags. Thus, although single-use paper bag litter may enter storm drains and temporarily affect hydrologic flow of surface water runoff, the potential to enter storm drains and cause long-term hydrologic effects is less than with single-use plastic bags.

Reusable bags may also become litter and enter storm drains; however, these bags differ from single-use bags in their weight and longevity. Reusable bags can be made from plastic or a variety of cloths such as vinyl or cotton. Built to withstand many uses, reusable bags typically weigh at least ten times what an HDPE plastic bag weighs and two times what a paper bag weighs. This restricts movement by wind. Reusable bags are typically reused until worn out through washing or multiple uses, and then typically disposed of either in the landfill or recycling facility. Because of the weight and sturdiness of these bags, reusable bags are less likely to become litter or be carried from landfills by wind compared to single-use plastic and paper bags (Green Cities California MEA, 2010). Therefore, reusable bags are less likely to enter the storm drain system as litter.

b. Water Quality and Single-use Bags. The quality of storm water draining into San Francisco Bay and Pacific Ocean remains a concern for the region. Nonpoint source pollution is considered one of the top threats to the Bay's ecological health and may account for a considerable proportion of the Bay's total pollutant load, which ultimately drains into and affects the water quality of the Pacific Ocean. In recent years, up to 40,000 metric tons of at least 65 different pollutants enter the Bay annually from urban and agricultural runoff, rivers, atmospheric fallout, municipal sewage treatment plants, industrial facilities, natural and artificial erosion, illegal dumping, dredging and dredged material disposal, marine vessel discharges, accidental spills, and landfill seepage (San Francisco Bay Conservation and Development Commission, October 2003). A study done by the San Francisco Estuary Institute estimates that stormwater runoff accounts for 95% of the cadmium, 70 percent of the chromium, 89% of the copper, 76% of the nickel, and 87% of the zinc pollutant loads to the Bay (San Francisco Bay Conservation and Development Commission, October 2003). The most effective way to reduce the level of contamination from surface runoff is through the control of pollutants prior to their discharge to the drainage system.

Water quality may be affected by bags in two different ways: litter from bags and the use of materials for processing activities. As described above in *Surface Water Drainage and Water Quality*, litter that enters the storm drain system may clog storm drains and could result in contamination or may be transported into the local watershed or coastal habitat, violating waste discharge requirements (as described below in the *Regulatory Setting*). In addition, manufacturing facilities may utilize materials that, if released in an uncontrolled manner, could degrade the water quality in local waterways. While single-use plastic bags are more likely to affect water quality as a result of litter, the plastic bag manufacturing process utilizes “pre-production plastic,” which may also degrade water quality if released either directly to a surface water body or indirectly through storm water runoff.

Single-use paper bags have fewer litter-related effects on water quality than single-use plastic bags; however, the manufacturing process for paper bags may utilize various chemicals and materials and may also require the use of fertilizers, pesticides and other chemicals for production of resources (such as pulp). Discharges of these chemicals and materials into water bodies, either directly or indirectly through storm water runoff, may increase the potential for higher than natural concentrations of trace metals, biodegradable wastes (which affect dissolved oxygen levels), and excessive major nutrients such as nitrogen and phosphorus.

Because of the weight and sturdiness of these bags, reusable bags are less likely to be carried from landfills by wind compared to single-use plastic and paper bags (Green Cities California MEA, 2010). However, similar to single-use paper bags, the manufacturing process for reusable bags can utilize materials such as chemicals or fertilizer for production of resources (such as cotton) that if released, either directly to a stream or indirectly via storm water runoff, could degrade water quality in local water bodies.

c. Regulatory Setting. The federal Clean Water Act (CWA) and the California Ocean Plan are the primary mechanisms through which pollutant discharges are regulated in California. The CWA established minimum national water quality goals and created the National Pollutant Discharge Elimination System (NPDES) permit system to regulate the quality of discharged water. All dischargers must obtain NPDES permits. Beginning in 1991, all municipal and industrial storm water runoff is also regulated under the NPDES system. Although the CWA has established 126 “priority contaminants” (metals and organic chemicals), the California Ocean Plan has established effluent limitations for 21 of these pollutants.

The U.S. Environmental Protection Agency (EPA) is the primary Federal agency responsible for implementing the CWA. The Regional Water Quality Control Board (RWQCB) is the state agency with primary responsibility for implementing the CWA and the state’s Porter-Cologne Water Quality Act. The RWQCB is also responsible for water quality regulation through its work in preparing and adopting the California Ocean Plan. Local agencies also have responsibility for managing wastewater discharges. All are required to meet criteria set forth in their NPDES permits, monitor their discharges, and submit monthly reports to the RWQCB and the EPA.

Assembly Bill (AB) 258 was enacted in 2008 to address problems associated with releasing “preproduction plastic” (including plastic resin pellets and powdered coloring for plastics) into the environment. The bill enacted Water Code Section 13367, requiring the State Water Resource

Control Board and RWQCBs to implement a program to control discharges of preproduction plastic from point and nonpoint sources (Green Cities California MEA, 2010). Program control measures must, at a minimum, include waste discharge, monitoring, and reporting requirements that target plastic manufacturing, handling, and transportation facilities. The program must, at a minimum, require plastic manufacturing, handling, and transportation facilities to implement best management practices to control discharges of preproduction plastics. This includes containment systems, careful storage of pre-production plastics, and the use of capture devices to collect any spills.

The State Water Resources Control Board (SWRCB, 2010) reports that it is taking the following actions to comply with Section 13367:

“State and Regional Water Board staff has conducted and are continuing to conduct compliance inspections of various types and scales of preproduction plastic manufacturing, handling, and transport facilities enrolled under California's Industrial General Permit (IGP) for storm water discharges...Collectively these inspections will help State and Regional Water Board staff to develop cost-effective regulatory approaches (including compliance-evaluation procedures and appropriate best management practices) for addressing this pollution problem.

“The State Water Board has issued an investigative order to all plastic-related facilities enrolled under the IGP to provide the State Water Board with critical information needed to satisfy the legislative mandates in AB 258 (Krekorian). Facilities subject to this order must complete an online evaluation and assess their points of potential preproduction plastics discharge and means of controlling these discharges. Data gathered as a result of this effort will be used to help the State Board understand the California plastics industry and ultimately develop appropriate regulation of these facilities to ensure compliance with the Clean Water Act.”

The cities, towns and unincorporated areas of San Mateo and Santa Clara Counties are among the 76 co-permittees listed under a regional municipal stormwater permit for San Francisco Bay. The Municipal Regional Stormwater NPDES Permit (MRP) for Phase I communities in the San Francisco Bay (Order R2-2009-0074) was adopted by the Regional Water Quality Control Board (RWQCB) for Region 2 on October 14, 2009. This permit regulates discharges from municipal separate storm drain systems into waterways under each co-permittee's jurisdiction. Provision C.10 of the MRP (Trash Load Reduction) requires Permittees to reduce trash from their Municipal Separate Storm Sewer Systems (MS4s) by 40% before July 1, 2014 by implementing control measures and other actions to reduce trash loads (RWQCB: San Francisco Bay Region: Order R2-2009-0074, October 2009; and, EOA Inc., February 2011). It should also be noted that permittees implementing a control measure for a single-use plastic bag ordinance would potentially receive at minimum 6% and up to 12% load reduction credit (Table CR-1.1, EOA Inc., February 2011).

The San Mateo Countywide Water Pollution Prevention Program (SMCWPPP) prevents the pollution of local water bodies such as creeks, San Francisco Bay and the Pacific Ocean. SMCWPPP is a partnership of the City/County Association of Governments (C/CAG), each incorporated city and town in the county, and the County of San Mateo, which share a common NPDES permit. Departments within the County of San Mateo have adopted Best Management

Practices (BMPs) to reduce the presence of pollutants in stormwater discharges to the maximum extent practicable. The SMCWPPP focuses on reduction of pollution entering the storm drain system, the control of pollutants from industrial and commercial facilities through the education of businesses about stormwater pollution prevention, and the control of pollutants from residential communities through public education about the causes and effects of stormwater pollution.

The County of Santa Clara and the co-permittees (including Campbell, Cupertino, Los Altos, Los Gatos, Milpitas and Mountain View) have developed the Santa Clara Valley Urban Runoff Pollution Prevention Program (SCVURPP). The SCVURPP incorporates regulatory, monitoring and outreach measures aimed at reducing pollution in urban runoff to the "maximum extent practicable" to improve the water quality of South San Francisco Bay and the streams of Santa Clara Valley. The County's Urban Runoff Management Plan details what the SCVURPP is doing to reduce urban runoff pollution in the Santa Clara Valley watershed.

4.4.2 Impact Analysis

a. Methodology and Significance Thresholds. The Proposed Ordinance would create a significant hydrology or water quality impact if it would:

1. *Generate polluted or increased surface water runoff or affect groundwater resources.*

The Initial Study (see Appendix A) concluded that the Proposed Ordinance could potentially result in a significant impact (impacts to surface water drainage and water quality issues as a result of the increased use of recyclable paper and reusable carryout bags).

b. Project Impacts and Mitigation Measures.

Impact HWQ-1 The Proposed Ordinance would incrementally increase the number of recycled paper and reusable bags used in the Study Area, but the reduction in the overall number of single-use plastic bags used in the Study Area would reduce the amount of litter and waste entering storm drains. This would improve local surface water quality, a Class IV, *beneficial, effect.*

As a result of the Proposed Ordinance, an estimated 95% of the single-use plastic bags currently used annually in the Study Area (approximately 552 million bags) would be replaced by an estimated 165 million single-use paper bags and approximately 6 million reusable bags. About 28 million single-use plastic bags are expected to remain in circulation (refer to Table 4.1-4 in Section 4.1, *Air Quality*). This represents a 64% reduction in the overall number of carryout bags used annually within the Study Area.

Each type of single-use bag's potential to become litter is based on the bag's weight, material and quantity of bags used. As described in Impact BIO-1 in Section 4.2, *Biological Resources*, the majority of single-use plastic bags end up as litter or in the landfill. Even those collected by recycling and solid waste trucks and handled at transfer stations and landfills may blow away

as litter due to their light weight (Green Cities California MEA, 2010). Single-use plastic bags that become litter may enter storm drains from surface water runoff or may be blown directly into local waterways by the wind. Single-use plastic bag litter that enters the storm drain system can block or clog drains resulting in contamination (Green Cities California MEA, 2010). Based on statewide data that currently almost 20 billion plastic grocery bags (or approximately 531 bags per person) are consumed annually in California (Green Cities California MEA, 2010), Study Area retail establishments currently use an estimated 552,931,362 single-use plastic carryout bags per year. The 64% reduction in the overall number of carryout bags used within the Study Area anticipated to result from implementation of the Proposed Ordinance is expected to have a commensurate reduction in the potential for carryout bags to enter and clog area storm drains.

Like single-use plastic bags, single-use paper grocery bags have the potential to enter storm drains and local waterways as litter. However, as described in Impact BIO-1 in Section 4.2, *Biological Resources*, due to their weight and recyclability, single-use paper bags are less likely to become litter compared to single-use plastic bags (Green Cities California MEA, 2010). In addition, because single-use paper bags are not as resistant to breakdown, they would be less likely to block or clog drains compared to single-use plastic bag. Therefore, paper bags would be less likely to result in storm drain blockage or contamination.

Due to the weight and sturdiness of reusable bags made for multiple uses, reusable bags are less likely to be littered or carried from landfills by wind as litter compared to both single-use plastic and paper bags (Green Cities California MEA, 2010). Therefore, shifting toward greater use of reusable bags would not degrade water quality compared to existing conditions as a result of litter, nor would it increase the potential for storm drain blockage.

As described above and in Section 4.1, *Air Quality*, and Section 4.3, *Greenhouse Gas Emissions*, the Proposed Ordinance is anticipated to reduce the overall amount of single-use bags used in the Study Area by approximately 352.5 million bags annually. Therefore, the Proposed Ordinance would be expected to reduce the amount of litter that could enter storm drains and local waterways, thus improving water quality and reducing the potential for storm drain blockage.

Mitigation Measures. Water quality, the storm drain operation, and associated hydrological conditions would benefit from the Proposed Ordinance because by reducing the amount of single-use plastic bags in the Study Area, the amount of litter that enters the storm drain system and local waterways would be incrementally reduced, thereby improving water quality. Therefore, mitigation is not required.

Significance After Mitigation. Impacts to water quality and storm drain operation from litter entering storm drains and local waterways would be beneficial without mitigation.

Impact HWQ-2 A shift toward reusable bags and potential increase in the use of recyclable paper bags could potentially increase the use of chemicals associated with their production, which could degrade water quality in some instances and locations. However, bag manufacturers would be required to adhere to existing regulations, including NPDES Permit requirements, AB 258, and the California Health and Safety Code. Therefore, impacts to water quality from altering bag processing activities would be Class III, *less than significant*.

The manufacturing process for single-use plastic, single-use paper, and reusable bags utilize various chemicals and materials. Single-use plastic bag manufacturers utilize “pre-production plastic.” As discussed in the *Setting*, paper bag manufacturers may utilize various chemicals and materials and may also require the use of fertilizers, pesticides and other chemicals for production of resources (such as pulp or cotton), which may increase the potential for higher natural concentrations of trace metals, biodegradable wastes (which affect dissolved oxygen levels), and excessive major nutrients such as nitrogen and phosphorus. Similar to paper bags, the manufacturing process for reusable bags can utilize materials such as chemicals or fertilizer for production of resources (such as cotton) that if released, either directly to a stream or indirectly via storm water runoff, could degrade water quality in local water bodies. If released into the environment, these pollutants could degrade water quality.

The intent of the Proposed Ordinance is to reduce the environmental impacts related to the use of single-use plastic carryout bags and promote a shift toward the use of reusable bags. The Proposed Ordinance is anticipated to reduce the overall number of single-use plastic bags used in the Study Area by 95% and reduce the use of all types of bags (including plastic, single-use paper, and reusable) by an estimated 64%. These shifts in the types and amounts of bags used could potentially alter processing activities related to bag production. The manufacturing impacts of each bag type and the anticipated changes in use are described below.

Single-use Plastic Bags. Conventional single-use plastic bags are a product of the petrochemical industry and are typically produced by independent manufacturers who purchase virgin resin from petrochemical companies or obtain non-virgin resin from recyclers or other sources. Single-use plastic bags begin the manufacturing process with the conversion of crude oil or natural gas into hydrocarbon monomers, which are then further processed into polymers. These polymers are heated to form plastic resins, which are then blown through tubes to create the air pocket of the bag. Once cooled, the plastic film is stretched to the desired size of the bag and cut into individual bags (Green Cities California MEA, 2010). As described in the *Setting*, the plastic resin pellets are a concern when accidentally released (from spilling into storm drains during use or transport) into aquatic environments.

AB 258 was enacted to address these concerns by implementing program control measures that require plastic manufacturing, handling, and transportation facilities to implement best management practices to control discharges (accidental release from spilling) of preproduction plastics. This includes containment systems, careful storage of pre-production plastics, and the use of capture devices to collect any spills.

Products used in the process to manufacture single-use plastic bags, such as petroleum and natural gas, also have the potential to be released as result of an accident during transport or use. However, regulatory agencies such as the EPA set forth Preliminary Remediation Goals (PRGs) for various pollutants in soil, air, and tap water (U.S. EPA Region IX, Preliminary Remediation Goals Tables, November 2011). PRG concentrations can be used to screen pollutants in environmental media, trigger further investigation, and provide initial cleanup goals resulting from an accident or spill of petroleum or natural gas at a single-use plastic bag manufacturing facility.

Single-use Paper Bags. The majority of single-use paper bags are made from kraft paper bags, which are manufactured from a pulp that is produced by digesting a material into its fibrous constituents via chemical and/or mechanical means. Kraft pulp is produced by chemical separation of cellulose from lignin. Chemicals used in this process include caustic sodas, sodium hydroxide, sodium sulfide, and chlorine compounds (Green Cities California MEA, 2010). Processed and then dried and shaped into large rolls, the paper is then printed, formed into bags, baled, and then distributed to grocery stores. Although it does not directly discharge pollutants, the paper bag manufacturing process may utilize fertilizers, pesticides and other chemicals in the production of resources such as pulp. These pollutants may increase the potential for higher concentrations of trace metals, biodegradable wastes (which affect dissolved oxygen levels), and excessive major nutrients such as nitrogen and phosphorus, causing eutrophication as a result of surface water runoff. A single-use paper bag has 14 times the impact of one single-use plastic bag on eutrophication, which is caused when nitrate and phosphate are emitted into water, stimulating excessive growth of algae and other aquatic life (Green Cities California MEA, 2010). Eutrophication reduces the water quality and causes a variety of problems such as a lack of oxygen in the water (Green Cities California MEA, 2010). However, direct discharges of pollutants into waters of the United States are not allowed, except in accordance with the National Pollutant Discharge Elimination System (NPDES) program established in Section 402 of the Clean Water Act (CWA).

Paper bag manufacturers are required to comply with the local plans and policies of the SWRCB and the RWQCB, which regulate discharges to surface and groundwater, regulate waste disposal sites, and require clean up of discharges of hazardous materials and other pollutants. For example, in San Mateo County, paper bag manufacturers would be required to adhere to the San Mateo Countywide Water Pollution Prevention Program (SCWPPP) which specifies Best Management Practices (BMPs) to reduce the presence of pollutants in stormwater discharges to the maximum extent practicable. Paper bag manufacturing facilities would be required to implement BMPs, reducing the likelihood that pollutants would enter storm drains and other aquatic environments. There are, however, no known bag manufacturers in San Mateo County or Santa Clara County.

Reusable Bags. Reusable bags can be manufactured with various materials, including polyethylene (PE) plastic, polypropylene (PP) plastics, multiple types of cloth (cotton canvas, nylon, etc.), and recycled plastic beverage containers (polyethylene terephthalate, or PET), among others (Green Cities California MEA, 2010). Depending on the type of material used in the manufacturing process, reusable bags have various impacts to water quality. A single reusable low density polyethylene (LDPE) bag has 2.8 times the impact of a single-use plastic bag on eutrophication as result of the use of pollutants that are used for materials in the

manufacturing process (Green Cities California MEA, 2010). In addition, other types of reusable bags, such as cotton canvas, may require the use of fertilizers, pesticides and other chemicals in the production process. These pollutants may increase the potential for higher natural concentrations of trace metals, biodegradable wastes (which affect dissolved oxygen levels), and excessive major nutrients such as nitrogen and phosphorus causing eutrophication as a result of surface water runoff. However, with reuse of a LDPE or cotton canvas bag as intended, impacts to eutrophication would be lower in comparison to a single-use plastic bag and a single-use paper bag since reusable bags are intended to be used “hundreds of times” (Green Cities California MEA, 2010). Therefore, each reusable bag would be expected to replace hundreds of single-use plastic or paper bags, more than offsetting the increased impacts associated with each individual bag.

As with other types of bags, reusable bag manufacturers would not be allowed to directly discharge pollutants into waters of the United States, except in accordance with the NPDES program established in Section 402 of the CWA. Reusable bag manufacturers may be required to obtain an “Individual” NPDES Permit and/or would need to adhere to an existing “General” NPDES Permit of the local area. An Individual NPDES permit regulates and limits the particular discharge at the manufacturing facility. The permit limits are based on the type of activity, nature of discharge and receiving water quality. Manufacturing facilities would need to apply for and obtain a permit prior to the start of manufacturing operations. In addition, as part of the Individual Permit, a manufacturing facility would be required to monitor and report its discharges to the local Regional Water Quality Control Board to demonstrate that the facility’s discharges are not in violation of any water quality standards.

Manufacturing facilities would also be required to adhere to existing General Permits that specify local discharge requirements for municipal storm water and urban runoff discharges. For example, in the County of San Mateo, single-use paper bag manufacturers would be required to adhere to the San Mateo Countywide Water Pollution Prevention Program (SCWPPP) which specifies Best Management Practices (BMPs) to reduce the presence of pollutants in stormwater discharges to the maximum extent practicable.

Although reusable bags may utilize various materials, reusable bag manufacturers who utilize plastics in their production (for example, production of LDPE reusable bags) would also be required to adhere to pending requirements specified in AB 258, which addresses the release of “preproduction plastics” as described in the *Setting*. In addition, the California Health and Safety Code (Section 25531-25543.3) establishes a program for the prevention of accidental releases of regulated substances. With adherence to Health and Safety Code Section 25531-25543.3, reusable bag manufacturing facilities would be required to prepare and update a Risk Management Plan (RMP). This would further reduce the potential for a release of substances that may be washed into and through the storm drainage systems, local waterways, the San Francisco Bay, and ultimately to the Pacific Ocean.

Anticipated Changes in Bag Use. Based on a cost requirement of at least \$0.10 per bag, as outlined in Section 4.1, *Air Quality*, it is assumed in this analysis that the total volume of plastic bags currently used in the Study Area (approximately 552,931,362 plastic bags per year) would be replaced by recycled paper bags (or 165,879,409 paper bags or 30% of the total) and reusable bags (or 6,911,642 reusable bags or 65% of the total) as a result of the Proposed Ordinance (refer

to Table 4.1-4 in Section 4.1, *Air Quality*). It is assumed that 5% of the existing total of single-use plastic bags used in the Study Area would remain in use since the Proposed Ordinance does not apply to some retailers who distribute plastic bags (e.g. restaurants) and these retailers would continue to distribute single-use bags after the Proposed Ordinance is implemented.

Although the Proposed Ordinance would be expected to incrementally increase demand for the manufacturing of recycled paper bags and reusable bags, it would also reduce demand for single-use plastic carryout bags by approximately 525.3 million bags per year. With implementation of the Proposed Ordinance, approximately 200.5 million single-use bags (including single-use paper, single-use plastic, and reusable bags) would be manufactured for use in the Study Area – a decrease of 64% compared to existing conditions. Consequently, the Proposed Ordinance would reduce the overall impacts to water quality associated with bag manufacturing. Furthermore, as described above, manufacturing facilities would be required to adhere to existing federal, state and local regulations. Therefore, impacts to water quality related to the potential change of processing activities as a result of the Proposed Ordinance would not be significant.

Mitigation Measures. Impacts would be less than significant and no mitigation is required.

Significance After Mitigation. Impacts to water quality related to the potential change of process activities would be less than significant without mitigation.

c. Cumulative Impacts. Adopted and pending bag ordinances, as described in Table 3-1 in Section 3.0, *Environmental Setting*, would continue to reduce the amount of single-use bags, and promote a shift toward reusable bags. As discussed above, the hydrology and water quality impacts associated with the proposed Single-Use Bag Ban Ordinance are not considered significant and are generally considered beneficial. Ten other agencies in San Francisco Bay Area region (City of Millbrae, City of Fairfax, County of Santa Clara, City of San Jose, City of Sunnyvale, County of Santa Cruz, Marin County, City of San Francisco, Alameda County, and the City of Palo Alto) have either adopted or are considering such ordinances. These ordinances would be expected to result in similar reductions in the amount of litter entering storm drains, local creeks or watersheds, thereby improving water quality. In addition, the overall reduction in bag manufacturing expected to occur as a result of implementation of these ordinances would be expected to generally reduce water quality impacts associated with bag manufacturing. In addition, all recycled paper and reusable bag manufacturing facilities would be required to comply with applicable regulatory requirements pertaining to preservation of water quality, including AB 258 and the California Health and Safety Code, as discussed in Impact HWQ-2. For these reasons, cumulative significant impacts associated with implementation of bag ordinances throughout the state are not anticipated.

4.5 UTILITIES AND SERVICE SYSTEMS

This section discusses potential impacts of the Proposed Ordinance on utilities, including water supply and distribution, wastewater collection and treatment, and solid waste.

4.5.1 Setting

a. Water Supply.

County of San Mateo. The Proposed Ordinance would apply to the unincorporated areas of San Mateo County, as well as 18 participating municipalities within the County. Water service in San Mateo County is provided by a mix of cities, special districts, private utility companies and mutual water companies. In addition, many rural areas of the County are served by wells. The majority of the County's water supplies are from the San Francisco Regional Water System owned by the City and County of San Francisco and operated by the San Francisco Public Utilities Commission (SFPUC). Other water sources include local surface and ground water. The regional water system includes Hetch Hetchy watersheds north of Yosemite and the Crystal Springs, San Andreas, Pilarcitos, Calaveras and San Antonio reservoirs (County of San Mateo, November 8, 2005).

All San Mateo County agencies purchasing water wholesale from San Francisco, along with similar agencies in Santa Clara and Alameda counties, do so in accordance with the Settlement Agreement and Master Water Sales Contract together with individual water supply contracts (County of San Mateo, November 8, 2005). Together these agreements define the contractual arrangements between San Francisco and its wholesale customers, including individual service areas and supply assurances. SFPUC wholesale customers are member agencies of the Bay Area Water Supply and Conservation Agency (BAWSCA), a special district created in 2003 by Assembly Bill 2058 to represent the interests of the 26 cities (including Brisbane, Burlingame, Daly City, East Palo Alto, Hillsborough, Menlo Park, Millbrae, Redwood City, San Bruno and the cities of Milpitas and Mountain View, which are located in Santa Clara County) and water districts and two private utilities that purchase water on a wholesale basis from the regional water system.

From 2008-2009, water supply for the BAWSCA service area was approximately 271,195 acre-feet per year (AFY) (242 million gallons per day) (BAWSCA, May 27, 2010). In 2018, projected supply for the BAWSCA service area is approximately 314,630 AFY, with conservation and 352,955 AFY without conservation (BAWSCA, May 27, 2010).

County of Santa Clara Cities. Six of the participating municipalities are located in Santa Clara County and receive water via the Santa Clara Valley Water District (SCVWD) which operates a complex system of reservoirs, canals, pipelines, groundwater basin recharge facilities, treatment plants and distribution pipelines. The SCVWD receives imported water supplies through long term contracts with the state and federal governments. All water supplies received by Santa Clara County from the state and federal water projects travel through the Sacramento/San Joaquin River Delta. Supplies to individual cities are also obtained from the City and County of San Francisco (Hetch-Hetchy) (County of Santa Clara General Plan, December 1994).

Total water use in Santa Clara County is estimated at 332,900 AFY as of 2010 (SCVWD UWMP, 2010). The estimated countywide demand in 2015 is 363,200 AFY (or approximately 30,300 AFY more than current conditions) (SCVWD UWMP, 2010).

Thus for the Study Area, the existing total existing water supply from both the BAWSCA and the SCVWD is approximately 604,095 AFY and is projected to be approximately 677,830 AFY between the years of 2015 and 2018 (or approximately 73,735 AFY more than current conditions).

Water Use Associated with Single-Use Plastic Carryout Bags. Various studies have estimated water use related to manufacturing of the different carryout bags (single-use plastic, paper or reusable bags) to determine a per bag water use rate. In order to provide metrics to determine environmental impacts associated with the Proposed Ordinance, reasonable assumptions based upon the best available sources of information have been utilized. Specific metrics that compare impacts on a per bag basis are available for single-use plastic, single-use paper, and LDPE reusable bags. However, water use for paper bags varies depending on which Life Cycle Assessment (LCA) data is utilized. The Ecobilan LCA study determined that per 9,000 liters of groceries, the manufacturing of plastic bags uses 52.5 liters of water, paper bags use 173 liters of water, and reusable bags (used 52 times) use 1.096 liters of water (Ecobilan, 2004; County of Los Angeles Final EIR, 2010). Similarly, though using slightly different assumptions and data, the Boustead LCA study determined that the manufacturing of carryout bags would require approximately 58 gallons of water for 1,500 plastic bags and approximately 1,004 gallons of water for 1,000 paper bags (assuming that one paper bag could carry the same quantity of groceries as 1.5 plastic bags). The Boustead data does not include estimates for reusable bags. Utilizing the data from these two different studies, Tables 4.5-1 and 4.5-2 summarize the existing water use associated with the manufacture of single-use plastic bags used in the Study Area.

**Table 4.5-1
Current Water Consumption Associated with Single-Use Plastic Carryout Bags Based on Ecobilan Data**

Number of Single-Use Plastic Carryout Bags**	Water Consumption		
	Liters of Water per 9,000 liters of Groceries	Gallons of Water Per Day*	Millions of Gallons per Year
552,931,362	52.5	32,744	11.95

Source: Boustead Consulting and Associates Ltd. 2007. Life Cycle Assessment for Three Types of Grocery Bags – Recyclable Plastic; Compostable, Biodegradable Plastic; and Recycled, Recyclable Paper. Prepared for Progressive Bag Affiliates; Ordinances to Ban Plastic Carryout Bags in Los Angeles County FEIR (SCH#2009111104, November 2010).

Based on the Ecobilan LCA data, water demand associated with the manufacture of the 552.9 million single-use plastic carryout bags currently used in the Study Area is approximately 11.95 million gallons per year or 32,744 gallons per day (0.032744 million gallons per day (MGD)). Based on the Boustead LCA data, water demand associated with the manufacture of the 552.9 million single-use plastic carryout bags used in the Study Area is approximately 58,575 gallons per day (0.058575 MGD).

No known plastic bag manufacturing facilities are located within either San Mateo County or Santa Clara County; therefore, water demand associated with plastic single-use carryout bag manufacturing does not directly affect the existing water supply in either county.

b. Wastewater Collection and Treatment.

County of San Mateo. The County of San Mateo manages 10 sewer districts that include approximately 150 miles of sewer pipes (County of San Mateo, April 2012). The approximate number of miles of sewer pipes maintained per district is shown below.

- 1) Burlingame Hills Sewer Maintenance District – 7.2 miles
- 2) Crystal Springs County Sanitation District – 18.9 miles
- 3) Devonshire County Sanitation District – 4.5 miles
- 4) Edgewood Sewer Maintenance District – 0.3 miles
- 5) Emerald Lake Heights Sewer Maintenance District – 29.0 miles
- 6) Fair Oaks Sewer Maintenance District – 81.3 miles
- 7) Harbor Industrial Sewer Maintenance District – 1.3 miles
- 8) Kensington Square Sewer Maintenance District – 0.8 miles
- 9) Oak Knoll Sewer Maintenance District – 1.5 miles
- 10) Scenic Heights County Sanitation District – 2.5 miles

The Districts contract with the neighboring cities or towns (also called downstream agencies) for the use of their pipes to transport sewage to the wastewater treatment plants. The County owns, operates, and maintains sewer mains, while sewer laterals are maintained by the property owner(s) served and wastewater treatment plants are operated by joint power authorities that do not include the County. Sewage flows from the collection systems in County districts to sewage treatment plants operated by the South Bayside System Authority (SBSA), or

the cities of Burlingame or San Mateo. The County Sewer/Sanitation Districts pay the plant or city that treats the sewage (County of San Mateo, 2011). The wastewater travels from the district sewer pipes to the pipes maintained by the County, city or town located between the district and the treatment plant. Eventually, the wastewater flows into a wastewater treatment plant to be treated before being discharged into San Francisco Bay.

Table 4.5-3 summarizes the various wastewater treatment plants, the cities they serve and the existing capacity at the plants.

**Table 4.5-3
Current Treatment Plants, Flow and Remaining Capacity
in the Study Area**

Treatment Plant	Cities Served in Study Area	Existing Flow (mgd)	Existing Capacity (mgd)	Remaining Capacity (mgd)

Mgd = million gallons per day of wastewater

Source: City of San Jose, May 2011, City of Palo Alto, 2012, Pacific Clean Energy.org – Burlingame Wastewater Treatment Plant, 2011, EPA – Millbrae Treatment Plant, 2011, Personal Communication Calera Creek Water Recycling Plant, May 2012, City of San Bruno Wastewater Division, 2012 and City of South San Francisco Public Works Homepage, 2012, City of Daly City Wastewater Homepage, 2012, Sewer Authority Mid-Coastside Homepage, 2012, City of Brisbane Homepage. May 2012.

* These cities are not included within the scope of the Proposed Ordinance since they do not contain any retailers that would be subject to the proposed Ordinance. However, because residents living within these cities would shop at retailers in the neighboring communities which would be subject to the Proposed Ordinance, these customers' bag use is considered within this analysis as a conservative approach.

County of Santa Clara Cities. Santa Clara County is served by eight municipal and eight special sanitary district sewage collection systems. The cities of Milpitas, Cupertino, Los Gatos, and Campbell are located in the northern portion of Santa Clara County, which are served primarily by the San Jose/Santa Clara Water Pollution Control Plant. The San Jose/Santa Clara Water Pollution Control Plant is one of the largest advanced wastewater treatment facilities in California. As shown in Table 4.5-3, the Water Pollution Control Plant currently treats approximately 120 million gallons of wastewater per day and has the capacity to treat 167 million gallons of wastewater per day (City of San Jose, May 2011). The cities of Mountain View and Los Altos are served by the Regional Water Quality Control Plant in Palo Alto. As shown in Table 4.5-3, the Palo Alto plant has a capacity of approximately 34 million gallons per day and currently treats approximately 22 million gallons per day (City of Palo Alto, 2012).

Thus for the Study Area as shown in Table 4.5-3, the existing remaining capacity for all treatment plants listed above is approximately 243 million gallons per day.

Wastewater Generation Associated with Single-Use Plastic Carryout Bags. Various studies have estimated wastewater generation associated with the manufacture of different types of carryout bags (single-use plastic, paper or reusable bags) to determine a per bag wastewater use rate. The Ecobilan study determined that per 9,000 liters of groceries, the manufacture of plastic bags would generate 50 liters of wastewater, while the manufacture of paper bags would generate 130.7 liters of wastewater and the manufacture of reusable bags (used 52 times) would generate 2.63 liters of wastewater. Based on the Ecobilan data, Table 4.5-4 displays the existing wastewater generation associated with the manufacture of the approximately 552.9 million plastic bags currently used in the Study Area annually. As shown, the manufacture of plastic bags currently generates approximately 31,125 gallons of wastewater per day (or 0.031125 MGD). Since no manufacturing facilities are located in the study, wastewater generation associated with single-use plastic carryout bag use does not directly affect any Study Area wastewater conveyance or treatment facilities.

**Table 4.5-4
Current Wastewater Generation Associated with Single-Use Plastic Carryout Bags Based on Ecobilan Data**

Number of Plastic Bags**	Wastewater		
	Liters of Wastewater per 9,000 liters of Groceries	Gallons of Water Per Day*	Millions of Gallons per Year
552,931,362	50	31,125	11.36

*Calculations are contained in the Utility Worksheets contained in Appendix C

c. Solid Waste.

County of San Mateo. There is only one active solid waste disposal facility located within San Mateo County. The main solid waste disposal site for San Mateo County is located

north of Highway 92 three miles east of Half Moon Bay within the 2,183 acre Ox Mountain Ranch property (County of San Mateo General Plan, November 1986). A number of other landfill disposal facilities throughout the County have been phased out or closed, and almost all solid waste generated within San Mateo County is disposed of at the large Ox Mountain Landfill. As shown in Table 4.5-5 below, the Ox Mountain Landfill has a permitted daily throughput of 3,598 tons per day, a remaining capacity of 44,646,148 cubic yards, and an estimated closure date of January 1, 2018 (CalRecycle, May 2012).

County of Santa Clara Cities. Solid waste generated in the cities of Milpitas, Cupertino and Los Altos are transferred to the Newby Island landfill, located on Dixon Landing Road in the City of San Jose (City of Cupertino General Plan, November 2005; City of Los Altos General Plan, November 2002; City of Milpitas General Plan, January 2002). Solid waste generated in the cities of Los Gatos and Campbell is taken to the Guadalupe landfill (City of Campbell General Plan, November 2001; Town of Los Gatos General Plan, January 2011). Solid waste generated in the City of Mountain View is first taken to the Sunnyvale Materials Recovery and Transfer Station (SMaRT Station®) where the unrecycled portion is eventually taken to the Kirby Canyon Landfill in San Jose (City of Mountain View General Plan, 1992).

Table 4.5-5 summarizes the permitted throughput, estimated capacity, and estimated closure date for facilities served by the Study Area.

**Table 4.5-5
Solid Waste Disposal Facilities**

Facility	Permitted Daily Throughput (tons/day)	Estimated Remaining Capacity (CY)*	Estimated Closure Date
Ox Mountain Landfill	3,598	44,646,148	2018
Newby Island Landfill	4,000	18,274,953	2025
Kirby Canyon Landfill	2,600	57,271,507	2022
Guadalupe Sanitary Landfill	1,300	11,055,000	2048

Source: California Department of Resources Recycling and Recovery (CalRecycle), <http://www.calrecycle.ca.gov/SWFacilities/Directory/Search.aspx> accessed on May 15, 2012.

* Remaining capacity estimates are based on reported estimated closure date minus the annual average throughput since date of reported remaining capacity.
 cy=cubic yards

All participating municipalities in the Study Area are required to comply with State Law AB 939, which required every city in California to reduce the waste it sends to landfills by 50% by the year 2000. As of 2006, each of the participating municipalities were diverting at least 50% of their solid waste (CalRecycle, Jurisdiction Diversion/Disposal Rate Summary, Accessed May 2012), thereby complying with the standards established by AB 939. As of 2006, the unincorporated areas of San Mateo County were recycling or otherwise diverting 62% of the solid waste generated countywide.

Solid Waste Generation Associated with Single-use Plastic Carryout Bags. Various studies have estimated solid waste rates related to the different types of carryout bags (single-use plastic, paper or reusable bags) to determine a per bag solid waste rate. Using EPA recycling rates and the Ecobilan data, it was determined that a plastic bag would generate .0065 kilograms (kg) of solid waste per bag, while a paper bag would generate 0.0087 kg of waste per bag, and a reusable bag (used 52 times) would generate 0.001 kg of waste per bag. Similarly, using the Boustead data along with EPA recycling rates, it was determined that plastic bags would produce 0.004 kg waste per bag, while a paper bag would result in 0.021 kg of waste per bag. The Boustead data does not estimate the solid waste from reusable bags. Tables 4.5-6 and 4.5-7 estimate the amount of solid waste associated with plastic bags currently used in the Study Area based on the Ecobilan and Boustead studies.

**Table 4.5-6
Current Solid Waste Associated with Single-use Plastic Carryout Bags Based on Ecobilan Data**

Number of Single-Use Plastic Carryout Bags**	Solid Waste		
	Solid Waste per Bag (kg)	Solid Waste Per Day (tons)*	Solid Waste per Year (tons)
552,931,362	0.0065	10.89	3,976

*Calculations are contained in the Utility Worksheets contained in Appendix C

**Table 4.5-7
Current Solid Waste Generation Associated with Single-use Plastic Carryout Bags Based on Boustead Data**

Number of Single-Use Plastic Carryout Bags	Solid Waste		
	Solid Waste per Bag (kg)	Solid Waste Per Day (tons)*	Solid Waste per Year (tons)
552,931,362	0.004	6.90	2,520

*Calculations are contained in the Utility Worksheets contained in Appendix C

** See Appendix C for the calculations for each individual city.

Source: Boustead Consulting and Associates Ltd. 2007. *Life Cycle Assessment for Three Types of Grocery Bags – Recyclable Plastic; Compostable, Biodegradable Plastic; and Recycled, Recyclable Paper.* Prepared for: Progressive Bag Affiliates; and Ordinances to Ban Plastic Carryout Bags in Los Angeles County FEIR (SCH#2009111104, November 2010).

As shown in Table 4.5-6, based on current EPA recycling rates and the Ecobilan data, the use of single-use plastic carryout bags within the Study Area generates approximately 10.89 tons of solid waste per day, or 3,976 tons per year. Based on the Boustead data (Table 4.5-7), the use of single-use plastic carryout bags within the Study Area generates approximately 6.90 tons of solid waste per day, or 2,520 tons per year.

4.5.2 Impact Analysis

a. Methodology and Significance Thresholds. To analyze impacts to utilities, the anticipated increase of water, wastewater and solid waste as a result of implementation of the Proposed Ordinance was compared to the available capacity of facilities that serve the Study Area.

Based on the County of San Mateo's environmental checklist, a significant impact related to utilities and service systems would occur if the Proposed Ordinance:

1. *Requires installation of a septic tank/leachfield sewage disposal system or require hookup to an existing collection system which is at or over capacity;*
2. *Adversely affects the capacity of any public facilities (streets, highways, freeways, public transit, schools, parks, police, fire, hospitals), public utilities (electrical, water and gas supply lines, sewage and storm drain discharge lines, sanitary landfills) or public works serving the site;*
3. *Generates any demands that will cause a public facility or utility to reach or exceed its capacity;*
4. *Creates significant amounts of solid waste or litter.*

The Initial Study (Appendix A) determined that all of the above criteria should be discussed in this EIR except impacts related to public facilities (streets, highways, freeways, public transit, schools, parks, police, fire, hospitals), which were determined to be less than significant. Impacts related to water, wastewater, and solid waste are discussed below.

b. Project Impacts and Mitigation Measures

Impact U-1 The increase of reusable bags within the Study Area as a result of the Proposed Ordinance would incrementally increase water demand due to washing of reusable bags by a negligible amount. However, sufficient water supplies are available to meet the demand created by reusable bags. Therefore, water supply impacts would be Class III, less than significant.

The Proposed Ordinance would increase the use of reusable bags as a result of prohibiting the distribution of single-use carryout plastic bags by retailers (excluding restaurants) and requiring a mandatory charge for recyclable paper bags. Manufacturing facilities of carryout bags are not known to be located within San Mateo or Santa Clara Counties. Therefore, manufacturing facilities would not utilize the water supplies of either County.

In addition to water use from manufacturing carryout bags, the Proposed Ordinance may result in increased water use as reusable bags would be machine washable or made from a material that can be cleaned or disinfected, as required by the Proposed Ordinance. Washing reusable bags used in the Study Area would utilize the water supplies of that municipality. It is anticipated that most bag users would simply include reusable bags in wash loads that would occur with or without the bags. Nevertheless, in order to provide a conservative estimate for

project impact to water usage, this analysis assumes that the demand for water in the Study Area would increase in order to maintain the hygiene of reusable bags, where bags are cleaned by washing machine or rinsing. This analysis assumes that approximately half of the reusable bags would be cleaned by rinsing and sanitizing and the other half would be machine washed. Assuming that all new reusable carryout bags require monthly cleaning in either a washing machine or by rinsing, the total increase in Study Area water demand (as shown in Table 4.5-8) would be approximately 395 AFY.

**Table 4.5-8
Water Use From Reusable Bag Cleaning**

# of Additional Reusable Bags from Proposed Ordinance that Require Washing ¹	Number of times washed per year (monthly) ²	# bags per Wash Load ³	# of Loads per Year	Gallons of Water per Wash Load*	Total Gallons per Year	Acre Feet Year (AFY)
3,455,821	12	19	2,182,624	40	87,304,960	267.93
3,455,821	12	N/A	N/A	1	41,469,852	127.26
Total						395.19

¹ Assumes that 50% of reusable bags would be machine washable and 50% would be hand washed/sanitized.

² Assumes that each bag is washed once a month.

³ Assumes an average washer capacity of 8 pounds per load and 6.8 ounces per bag (as measured on 8/10/2010 by Rincon Consultants, Inc.)

*Source: California Energy Commission: Consumer Energy Center, 2010; City of Santa Monica Carryout Bag Final EIR, January 2011.

As stated in the *Setting*, for the Study Area, the total existing water supply from both the BAWSCA and the SCVWD which serve the entire Study Area is approximately 604,095 AFY and is projected to be approximately 677,830 AFY between the years of 2015 and 2018 (or approximately 73,735 AFY more than current conditions). Based on the water supply estimates for the Study Area and assuming that all member agencies fully participate in water conservation programs, the conservative estimate for additional water demand associated with reusable bag washing would represent approximately 0.065% of the current supply and 0.058% of the anticipated supply between the years 2015 and 2018. Thus, the potential increase in water demand due to implementation of the Proposed Ordinance is within the capacity of the water supplies of the Study Area and would result in a less than significant impact. Furthermore, the estimated water demand associated with implementation of the Proposed Ordinance is very conservative, as it assumes that 50% of reusable bags would be washed in separate washing machine loads rather than included in existing wash loads.

Mitigation Measures. Impacts would be less than significant; therefore mitigation is not required.

Significance After Mitigation. Impacts would be less than significant without mitigation.

Impact U-2 Water use associated with washing reusable bags would increase negligibly in the Study Area resulting in an increase in wastewater generation. Projected wastewater flows would remain within the capacity of the wastewater collection and treatment system of the Study Area, and would not exceed applicable wastewater treatment requirements of the RWQCB. Impacts would be Class III, *less than significant*.

Although the Proposed Ordinance would not result in additional sewer connections or an increase in the service population, it may incrementally increase water use associated with washing of reusable bags and, therefore, may incrementally increase Study Area wastewater generation. As stated in the *Setting*, the existing remaining capacity for all treatment plants listed in Table 4.5-3 is approximately 243 million gallons per day.

The manufacture of single-use carryout bags produces wastewater (as described above in the *Setting*); however, because there are no known manufacturing facilities located within San Mateo or Santa Clara counties, the use of single-use plastic carryout bags does not currently affect wastewater conveyance or treatment facilities serving the Study Area.

The use of reusable bags within the Study Area would, however, require periodic washing of bags for hygienic purposes. Assuming that 100% of the water used to wash reusable bags would become wastewater, approximately 395 AFY per year (128,774,812 gallons) or approximately 352,808 gallons per day would enter the sewer system and require treatment at the Study Area's treatment plants. 352,808 gallons per day represents 0.15% of the available capacity (approximately 243 MGD) at all Study Area treatment plants and would not exceed the remaining capacity at any of the treatment plants. Thus, there is adequate capacity to treat the additional wastewater that would result from the Proposed Ordinance and no new facilities would be necessary. Impacts would be less than significant.

Mitigation Measures. Impacts would be less than significant; therefore, mitigation is not necessary.

Significance After Mitigation. Impacts related to wastewater generation would be less than significant without mitigation.

Impact U-3 The Proposed Ordinance would alter the solid waste generation associated with increased paper bag use in the Study Area. However, projected future solid waste generation would remain within the capacity of regional landfills. Impacts would therefore be Class III, *less than significant*.

Solid waste generated within the Study Area is taken to various landfills operating within San Mateo and Santa Clara Counties. Solid waste in the County of San Mateo is sent to the Ox Mountain Landfill. Solid waste generated in the six participating municipalities located in Santa Clara County is sent to the Guadalupe, Kirby Canyon, or Newby Island Landfills.

The Proposed Ordinance does not involve any physical development. However, use of carryout bags would require disposal at the end of use and would incrementally increase existing solid waste generation. Tables 4.5-9 and 4.5-10 estimate the anticipated change in solid waste generation that would result from the Proposed Ordinance using the Ecobilan (Table 4.5-9) and the Boustead (Table 4.5-10) data.

**Table 4.5-9
Solid Waste Due to Carryout Bags Based on Ecobilan Data**

Type of Bags	Number of Bags	Solid Waste		
		Solid Waste per Bag per day (kg)	Solid Waste Per Day (tons)*	Solid Waste per Year (tons)

Source: Boustead Consulting and Associates Ltd. 2007. Life Cycle Assessment for Three Types of Grocery Bags – Recyclable Plastic; Compostable, Biodegradable Plastic; and Recycled, Recyclable Paper. Prepared for: Progressive Bag Affiliates; and Ordinances to Ban Plastic Carryout Bags in Los Angeles County FEIR (SCH#2009111104, November 2010).

**Please note that the Boustead data does not estimate solid waste from reusable bags.

See Appendix C for Solid Waste for individual municipalities' bag use

As shown in Table 4.5-9, based on the Ecobilan data, the Proposed Ordinance would result in a reduction of approximately 2,181 tons per year of solid waste. However, based on the Boustead

data, there would be an increase of approximately 1,524 tons per year of solid waste, primarily due to the projected increase in paper bag use.

Based on the “worst case” scenario (the Boustead data in Table 4.5-10), the increase of solid waste (4.28 tons per day) represents less than 0.33% of the daily capacity at all of the landfills that serve the Study Area. Therefore the increase in solid waste, based on the “worst case” scenario, would not exceed the daily capacity for any of the Study Area landfills, including Ox Mountain Landfill (daily capacity of 3,598 tons/day), Kirby Canyon Landfill (daily capacity of 2,600 tons/day), the Newby Island Landfill (daily capacity of 4,000 tons/day), or the Guadalupe Sanitary Landfill (daily capacity of 1,300 tons/day). Therefore, the impact to solid waste facilities as a result of the Proposed Ordinance would be less than significant.

Mitigation Measures. Impacts would be less than significant; therefore, mitigation is not required.

Significance After Mitigation. Impacts related to solid waste generation would be less than significant without mitigation.

c. Cumulative Impacts. Adopted and pending carryout bag ordinances, as described in Table 3-1 in Section 3.0, *Environmental Setting*, would continue to reduce the amount of single-use carryout bags, and promote a shift toward reusable carryout bags. Cumulative impacts are discussed below by impact area.

Water. Similar to the Proposed Ordinance, other adopted and pending ordinances could incrementally increase water use associated with washing of reusable bags for hygienic purposes. Nine other agencies in San Francisco Bay Area region (City of Fairfax, County of Santa Clara, City of San Jose, City of Sunnyvale, County of Santa Cruz, Marin County, City of San Francisco, Alameda County, and the City of Palo Alto) have either adopted or are considering such ordinances. However, based on the incremental water use associated with the Proposed Ordinance (increase of approximately 395 AFY per year), the other ordinances are not expected to generate an increase in water that would exceed water supplies in their respective regions. In addition, because other agencies (i.e., County of Santa Cruz, City of Fairfax and Marin County), may have separate water supplies than those that serve the Study Area, the Proposed Ordinance’s increase in wastewater would not impact water supplies in those areas. Therefore, cumulative water impacts would not be significant.

Wastewater. Similar to the Proposed Ordinance, other adopted and pending ordinances could incrementally increase wastewater associated with washing of reusable bags. Nine other agencies in San Francisco Bay Area region (County of Santa Clara, City of San Jose, City of Sunnyvale, County of Santa Cruz, Marin County, City of San Francisco, Alameda County, and the City of Palo Alto) have either adopted or are considering such ordinances. However, based on the incremental increase in wastewater associated with the Proposed Ordinance (approximately 352,208 gallons per day), the other ordinances are not expected to generate an increase in wastewater that would exceed the capacity of a wastewater treatment plant or require new or expanded facilities within their respective regions. In addition, because other agencies (i.e., County of Santa Cruz, City of Fairfax and Marin County) may have separate treatment plants than those that serve the Study Area, the Proposed Ordinance’s increase in

wastewater would not impact treatment plants in those areas. Therefore, cumulative wastewater impacts would not be significant.

Solid Waste. Similar to the Proposed Ordinance, other adopted and pending ordinances could incrementally increase solid waste associated with carryout bags. Ten other agencies in San Francisco Bay Area region (City of Millbrae, City of Fairfax, County of Santa Clara, City of San Jose, City of Sunnyvale, County of Santa Cruz, Marin County, City of San Francisco, Alameda County, and the City of Palo Alto) have either adopted or are considering such ordinances. As described in Impact U-3, these ordinances may actually result in a reduction of solid waste according to the Ecobilan study. However, using the more conservative Boustead data, based on the incremental increase in solid waste (approximately 4.28 tons per day) associated with the Proposed Ordinance, the other ordinances are not expected to generate an increase in solid waste that would exceed the capacity of a regional landfill or require new or expanded facilities within their respective regions. In addition, because other agencies (i.e., County of Santa Cruz, City of Fairfax and Marin County), may utilize other landfills than those that serve the Study Area, the Proposed Ordinance's increase in solid waste would not impact landfill capacity in those areas. Therefore, cumulative solid waste impacts would not be significant.

This page intentionally left blank

5.0 OTHER CEQA DISCUSSIONS

This section discusses additional issues required for analysis under CEQA, including growth inducement and significant irreversible environmental effects.

5.1 GROWTH INDUCING IMPACTS

The *CEQA Guidelines* require a discussion of a proposed project's potential to foster economic or population growth, including ways in which a project could remove an obstacle to growth. Growth does not necessarily create significant physical changes to the environment. However, depending upon the type, magnitude, and location of growth, it can result in significant adverse environmental effects. Therefore, the Proposed Ordinance's growth-inducing potential is considered significant if it could result in significant physical effects in one or more environmental issue areas. The most commonly cited example of how an economic effect might create a physical change is where economic growth in one area could create blight conditions elsewhere by causing existing competitors to go out of business and the buildings to be left vacant.

5.1.1 Economic and Population Growth

The Proposed Ordinance would prohibit retail establishments (excluding restaurants) in the Study Area from distributing single-use carryout paper and plastic bags at no charge, and would create a mandatory 10 cent (\$0.10) charge for each recycled paper and reusable bag distributed by these stores at the point of sale. The intent of the Proposed Ordinance is to reduce the environmental impacts related to the use of single-use plastic bags, and to promote a shift toward the use of reusable bags. The Proposed Ordinance would not include development of any physical structures or involve any construction activity.

Plastic bag production and distribution would reduce as a result of the Proposed Ordinance. However, employment patterns in the region would not be affected as there are no known plastic bag manufacturing facilities in the Study Area. In addition, recyclable paper bag use is anticipated to increase incrementally. However, similar to plastic bag manufacturing, employment patterns in the region would not be affected by the Proposed Ordinance as there are no known paper bag manufacturing plants in the Study Area. However, it should be noted that there is a paperbag manufacturing plant in Beuna Park, California (see NOP Scoping Letter from International Paper letter contained in Appendix A). Also, demand for reusable bags can be anticipated to increase. Nevertheless, incremental increases in the use of paper and reusable bags in the region is not anticipated to significantly affect long-term employment at these facilities or increase the region's population.

Therefore, the Proposed Ordinance would not be growth-inducing as it would not affect long-term employment opportunities or increase the region's population.

Revenues generated by sales of paper bags would remain with the affected stores. The Proposed Ordinance would not affect economic growth and therefore would not be significant.

5.1.2 Removal of Obstacles to Growth

The Proposed Ordinance would prohibit retail establishments (excluding restaurants) in the Study Area from distributing single-use carryout paper and plastic bags at no charge, and would create a mandatory 10 cent (\$0.10) charge for each recycled paper and reusable bag distributed by these stores at the point of sale. The intent of the Proposed Ordinance is to reduce the environmental impacts related to the use of single-use plastic bags, and to promote a shift toward the use of reusable bags. No improvements to water, sewer, and drainage connection infrastructure would be necessary. No new roads would be required. Because the Proposed Ordinance would not include any physical development or construction activities and would not involve the extension of infrastructure into areas that otherwise could not accommodate growth, it would not remove an obstacle to growth.

5.2 IRREVERSIBLE ENVIRONMENTAL EFFECTS

The *CEQA Guidelines* require that EIRs reveal the significant environmental changes that would occur with project development. CEQA also requires decisionmakers to balance the benefits of a proposed project against its unavoidable environmental risks in determining whether to approve a project. This section addresses non-renewable resources, the commitment of future generations to the Proposed Ordinance, and irreversible impacts associated with the Proposed Ordinance.

The Proposed Ordinance would prohibit retail establishments (excluding restaurants) in the Study Area, from distributing single-use carryout paper and plastic bags at no charge, and would create a mandatory 10 cent (\$0.10) charge for each recycled paper and reusable bag distributed by these stores at the point of sale. The intent of the Proposed Ordinance is to reduce the environmental impacts related to the use of single-use carryout bags, and to promote a shift toward the use of reusable bags. As an ordinance, the project would not include development of any physical structures or involve any construction activity. Therefore, the Proposed Ordinance would not alter existing land uses or cause irreversible physical alterations related to land development or resource use. To the contrary, the express purpose of the Ordinance is to reduce the wasteful use of resources and associated environmental impacts.

The manufacturing of carryout bags and the additional truck trips associated with delivering carryout bags (recyclable paper and reusable bags) to the Study Area would incrementally reduce regional air pollutant emissions. As discussed in Section 4.1, *Air Quality*, air pollutant emissions would not be increased beyond existing thresholds and with anticipated reductions in the overall number of plastic bags used in the Study Area, emissions would be reduced compared to existing conditions. Similarly, as discussed in Section 4.3, *Greenhouse Gas Emissions*, although the proposed Ordinance would result in net increase of GHG emissions (approximately 0.006 CO₂e/person/year) compared to existing conditions, this increase would not exceed any thresholds of significance and the Proposed Ordinance would be consistent with applicable plans, policies and regulations related to reducing GHG emissions. Thus, the Proposed Ordinance would not result in any significant impacts related to air quality and GHG emissions.

6.0 ALTERNATIVES

As required by Section 15126.6 of the *CEQA Guidelines*, this section examines a range of reasonable alternatives to the proposed project. The following four alternatives are evaluated:

- *Alternative 1: No Project*
- *Alternative 2: Ban on Single-Use Plastic Bags at all Retail Establishments*
- *Alternative 3: Mandatory Charge of \$0.25 for Paper Bags*
- *Alternative 4: Ban on Both Single-use Plastic and Paper Carryout Bags*

This section also includes a discussion of the “environmentally superior alternative” among those studied.

6.1 ALTERNATIVE 1: NO PROJECT ALTERNATIVE

6.1.1 Description

The no project alternative assumes that the Single Use Bag Ban Ordinance is not adopted or implemented. Single-use plastic and paper carryout bags would continue to be available free-of-charge to customers at most retail stores throughout the Study Area. In addition, reusable carryout bags would continue to be available for purchase by retailers. Thus, it is assumed that the use of carryout bags at Study Area retail stores would not change compared to current conditions.

6.1.2 Impact Analysis

No change in environmental conditions would occur under this alternative because neither a ban nor a mandatory charge for carryout bags would be imposed. Thus, Study Area retail customers would have no incentive to alter their existing carryout bag preferences. Because conditions would not change under this alternative, none of the impacts in the studied issue areas associated with the Proposed Ordinance would occur. This alternative would not result in the change in truck trips associated with delivering reusable bags and paper bags that would occur with implementation of the Proposed Ordinance and would therefore eliminate the greenhouse gas (GHG)/climate change impacts associated with such trips. In addition, because the No Project alternative would not facilitate a shift to reusable bags, the Proposed Ordinance’s less than significant impacts related to water and wastewater demand from washing reusable bags would be eliminated. On the other hand, this alternative would not achieve the Proposed Ordinance’s beneficial effects relative to air quality, biological resources (sensitive species), and hydrology and water quality, nor would it result in the general benefits with respect to litter reduction that are expected to result from implementation of the Proposed Ordinance. Solid waste generation would not change from existing conditions and, therefore, there would be no impact related to solid waste facilities.

6.2 ALTERNATIVE 2: BAN ON SINGLE-USE PLASTIC BAGS AT ALL RETAIL ESTABLISHMENTS

6.2.1 Description

Similar to the proposed Single Use Bag Ban Ordinance, this alternative would prohibit Study Area retailers from providing single-use plastic carryout bags to customers at the point of sale and create a mandatory \$0.10 charge per paper bag until December 31, 2014 and twenty-five cents (\$0.25) per paper bag on or after January 1, 2015. However, under this alternative, the Ordinance would apply to all categories of retail establishments, including restaurants and non-profit, charitable retailers. As a result, under this alternative, no single-use plastic carry out bags would be distributed at the point of sale anywhere within the Study Area.

Under this alternative, the Ordinance would eliminate distribution of all single-use plastic bags carryout bags within the Study Area (a reduction of 552,931,362 plastic bags). In contrast, the Proposed Ordinance is expected to reduce the number of single-use plastic carryout bags distributed within the Study Area by 95%. It is assumed that the additional plastic bags that would be removed under this alternative would be replaced by recyclable paper bags, such that, in total, 35% of single-use plastic bags currently used within the Study Area would be replaced by recyclable paper bags, and 65% would be replaced by reusable bags.

The total estimate of bag use under this alternative, compared to the Proposed Ordinance, is summarized in Table 6-1.

Table 6-1
Estimated Carryout Bag Use: Proposed Ordinance versus Alternative 2

Bag Type	Carryout Bags Used Annually	
	Proposed Ordinance*	Alternative 2**
Single-Use Plastic	27,646,568	0
Single-Use Paper	165,879,409	193,525,977
Reusable	6,911,642	6,911,642
Total	200,437,619	200,437,619

*Refer to Table 4.1-4 in Section 4.1, *Air Quality*.

** Based on assumptions of 35% conversion of the volume of existing plastic bag use in the Study Area to paper bags and 65% conversion to reusable bags (based on 52 uses per year).

6.2.2 Impact Analysis

a. Air Quality. As described in Section 4.1, *Air Quality*, it is anticipated that the Proposed Ordinance would replace the total volume of single-use plastic bags currently used in the Study Area with approximately 30% recyclable paper bags and 65% reusable bags, leaving 5% of the plastic bags in circulation (or approximately 27.6 million bags, as shown in Table 6-1 above). This alternative would prohibit all retail establishments including restaurants in the Study Area from providing single-use plastic carryout bags to customers at the point of sale and

would therefore eliminate an additional 27.6 million single-use plastic bags as compared to the Proposed Ordinance. Consequently, this alternative would reduce emissions associated with plastic bag manufacturing, transportation, and disposal to a greater extent than the Proposed Ordinance.

However, because the additional 5% of single-use plastic bags captured by this alternative would be replaced by paper bags rather than reusable bags (refer to Table 6-1), the total number of paper bags would increase compared to the Proposed Ordinance. As described in Section 4.1, *Air Quality*, paper bags have a greater per bag impact than single-use plastic bags. Because Alternative 2 would essentially trade 27.6 million single-use plastic bags for the same number of single-use paper bags, air pollutant emissions would incrementally increase as compared to what would occur under the Proposed Ordinance.

Table 6-2 estimates emissions that contribute to the development of ground level ozone and atmospheric acidification that would result from implementation of Alternative 2, as compared to the Proposed Ordinance.

Table 6-2
Estimated Emissions that Contribute to Ground Level Ozone and
Atmospheric Acidification (AA) from Alternative 2

Bag Type	# of Bags Used per Year	Ozone Emission Rate per Bag	Ozone Emissions (kg) per 1,000 bags	Ozone Emissions per year (kg)	AA Emission Rate per Bag	AA Emissions (kg) per 1,000 bags	AA Emissions per year (kg)
Single-use Plastic	0	1.0	0.023	0	1.0	1.084	0
Single-use Paper	193,525,977	1.3	0.03	5,806	1.9	2.06	398,664
Reusable	6,911,642	1.4	0.032	221	3.0	3.252	22,476
Alternative 2 Total				6,027	Alternative 2 Total		421,140
Proposed Ordinance Total				5,833	Proposed Ordinance Total		394,158
Difference				194	Difference		26,982
Existing Total (without an Ordinance)				12,717	Existing Total (without an Ordinance)		599,378
Net Change of Alternative 2 (Alternative 2 Total minus Existing Total)				(6,690)	Net Change of Alternative 2 (Alternative 2 Total minus Existing Total)		(178,238)

Source: Refer to Table 4.1-5 in Section 4.1, *Air Quality*.

As compared to the Proposed Ordinance, the contribution to ground level ozone would increase by approximately 194 kg per year under this alternative (a 3% increase) and the contribution to atmospheric acidification would increase by approximately 26,982 kg per year (a 6% increase) when compared to the Proposed Ordinance. However, this alternative, like the Proposed Ordinance, would reduce emissions of ozone and atmospheric acidification compared to existing conditions.

To estimate mobile emissions resulting from Alternative 2, the number of truck trips per day was calculated using the assumptions outlined in the Initial Study (Appendix A). As shown in Table 6-3, Alternative 2 would result in an estimated net 687 truck trips per year, or 1.88 truck trips per day, which is slightly higher than the Proposed Ordinance (net 1.57 truck trips per day).

Table 6-3
Estimated Truck Trips per Day
Following Implementation of Alternative 2

Bag Type	Number of Bags per Year	Number of Bags per Truck Load*	Truck Trips Per Year	Truck Trips per Day
Single-use Plastic	0	2,080,000	0	0
Single-use Paper	193,525,977	217,665	889	2.44
Reusable	6,911,642	108,862	64	0.17
Alternative 2 Total			953	2.61
Proposed Ordinance Total			839	2.3
Difference			114	0.31
Existing Total for Plastic Bags (without an Ordinance)			266	0.73
Net Change of Alternative 2 (Alternative 2 Total minus Existing Total)			687	1.88

*City of Santa Monica Single-Use Carryout Bag Ordinance EIR (SCH #2010041004), January 2011; and City of Sunnyvale Carryout Bag Ordinance EIR (SCH#2011062032), December 2011.

Based on the estimated truck trips for Alternative 2, mobile emissions were calculated using the URBEMIS model. As shown in Table 6-4, although Alternative 2 would slightly increase truck trips compared to the proposed Ordinance, this increase is negligible such that daily ROG, NO_x, PM₁₀, and PM_{2.5} emissions would be the same for Alternative 2 as for the Proposed Ordinance. None of these emissions would exceed BAAQMD thresholds.

Table 6-4
Operational Emissions Associated with Alternative 2

	Emissions (lbs/day)			
	ROG	NO _x	PM ₁₀	PM _{2.5}
Mobile Emissions: Proposed Ordinance	0.02	0.23	0.03	0.01
Mobile Emissions: Alternative 2	0.02	0.27	0.03	0.01
<i>BAAQMD Thresholds</i>	<i>54</i>	<i>54</i>	<i>82</i>	<i>54</i>
Threshold Exceeded?	No	No	No	No

Source: URBEMIS 2007 calculations for Vehicle. See Appendix B for calculations

Based on the above, impacts resulting from bag manufacturing and use (including ground level ozone and atmospheric acidification) would be slightly greater under this alternative, but would continue to be Class IV, *beneficial*, while impacts relating to truck emissions would continue to be Class III, *less than significant*.

b. Biological Resources. Similar to the Proposed Ordinance, this alternative would ban single-use plastic carryout bags, thereby reducing the amount of single-use plastic bag litter that could enter the marine environment and affect sensitive species. Although this alternative may incrementally increase the use of paper bags in the Study Area as compared to the Proposed Ordinance, the impacts of paper bags on biological resources are less than those of single-use plastic bags. Because of their weight and recyclability, paper bags are less likely to become litter compared to single-use plastic bags (Green Cities California MEA, 2010). In addition, because paper bags are not as resistant to biodegradation, there would be less risk of entanglement if entering the marine environment compared to single-use plastic bags. Therefore, the impact to sensitive species as a result of litter entering the marine environment from Alternative 2 would be reduced compared to the Proposed Ordinance. Similar to the Proposed Ordinance, impacts would be Class IV, *beneficial*. Overall benefits would be somewhat greater than those of the Proposed Ordinance.

c. Greenhouse Gas Emissions. Compared to the Proposed Ordinance, this alternative would be expected to reduce the number of single-use plastic bags by approximately 27.6 million bags and increase the number of paper bags by the same amount. The number of reusable bags would not change as compared to the Proposed Ordinance. As noted in Section 4.3, *Greenhouse Gases*, through the manufacturing, transportation, and disposal, each paper bag results in 3.3 times the emissions of a single-use plastic bag. Because this alternative would increase the number of paper bags and reduce the number of single-use plastic bags, it would result in a net increase of GHG emissions compared to the Proposed Ordinance.

Table 6-5 provides an estimate of GHG emissions associated with implementation of Alternative 2.

Table 6-5
Estimated Greenhouse Gas Emissions
from Alternative 2

Bag Type	Estimated Number of Bags Used per Year	GHG Impact Rate per Bag	CO ₂ e (metric tons)	CO ₂ e per year (metric tons)	CO ₂ e per Person
Single-use Plastic	0	1.0	0.04 per 1,500 bags	0	0
Single-use Paper	193,525,977	2.97	0.1188 per 1,000 bags	22,991	0.022
Reusable	6,911,642	2.6	0.104 per 1,000 bags	719	0.00069
Alternative 2 Total				23,710	0.022
Proposed Ordinance Total				21,163	0.020
Difference				2,547	0.002
Existing Total (without an Ordinance)				14,745	0.014
Net Change of Alternative 2 (Alternative 2 Total minus Existing Total)				8,965	0.009

CO₂e = Carbon Dioxide Equivalent units

Source: Refer to Table 4.3-4 in Section 4.3, Greenhouse Gas Emissions.

Compared to the proposed Ordinance, GHG emissions under Alternative 2 would increase by approximately 0.009 CO₂e per person per year. Although Alternative 2 would result in slightly greater GHG impacts than the Proposed Ordinance, emissions as a result of this alternative would not exceed the 4.6 metric tons CDE per person per year threshold. Therefore, impacts would remain Class III, *less than significant*.

d. Hydrology and Water Quality. Similar to the Proposed Ordinance, this alternative would reduce the number of single-use plastic bags used within the Study Area, thereby incrementally reducing the amount of plastic litter and waste entering storm drains. Although this alternative would be expected to replace 27.6 million single-use plastic bags with the same number of paper bags, single-use paper bags are not as resistant to breakdown and would therefore be less likely to block or clog drains compared to single-use plastic bags (refer to Section 4.4, *Hydrology and Water Quality*). Because paper bags would be less likely to result in storm drain blockage or contamination, this alternative would reduce litter compared to the Proposed Ordinance. As with the Proposed Ordinance, an incremental reduction in the amount of litter that could enter storm drains and local waterways would improve water quality and reduce the potential for storm drain blockage. Therefore, like the Proposed Ordinance, this alternative would result in generally Class IV, *beneficial*, effects to water quality, and overall benefits would be somewhat greater under this alternative.

This alternative would be expected to result in the use of more paper carryout bags in the Study Area than with implementation of the Proposed Ordinance. However, as with the Proposed Ordinance, paper bag manufacturing facilities would be required to adhere to NPDES Permit requirements, AB 258 and the California Health and Safety Code reducing impacts to water quality. Impacts to water quality from altering bag processing activities would be the same as under the Proposed Ordinance and would remain Class III, *less than significant*.

e. Utilities and Service Systems. Compared to the Proposed Ordinance, this alternative would be expected to reduce the number of single-use plastic bags by approximately 27.6 million bags and increase the number of paper bags by same amount. The number of reusable bags would not change under this alternative. Because the same number of reusable bags would be used under this alternative as under the Proposed Ordinance, water demand and wastewater generation related to washing reusable bags would be roughly the same. This includes 395 AFY of water and approximately 352,208 gallons per day of wastewater. As discussed in Section 4.5, *Utilities*, there are sufficient water supplies available to meet this demand, as well as capacity within the existing wastewater distribution and treatment system. Therefore, impacts would be similar to the Proposed Ordinance and would continue to be Class III, *less than significant*.

Using the more conservative solid waste generation rates from Boustead (as shown in Table 4.5-9 in Section 4.5, *Utilities and Service systems*), implementation of this alternative would generate a net increase of an estimated 5.62 tons/day of solid waste (calculations are contained in Appendix C). In comparison, implementation of the Proposed Ordinance would generate an increase of 4.17 tons/day. Therefore, Alternative 2 would generate 1.45 tons/day more solid waste than the Proposed Ordinance (a 26% increase). However, like the Proposed Ordinance, this increase would not exceed the available capacity at area landfills. Therefore, solid waste impacts would be greater when compared to the proposed Ordinance, but would remain Class III, *less than significant*.

6.3 ALTERNATIVE 3: MANDATORY CHARGE OF \$0.25 FOR PAPER BAGS

6.3.1 Description

This alternative would continue to prohibit Study Area retail establishments from providing single-use plastic bags to customers at the point of sale, but would increase the mandatory charge for a single-use paper bag from \$0.10 to \$0.25 initially rather than on or after January 1, 2015. As a result of the \$0.15 mandatory charge increase per paper bag, it is anticipated that this alternative would further promote the use of reusable bags since customers would be deterred from purchasing paper bags due to the additional cost.

Based on a cost requirement of \$0.25 per bag, it is assumed that the total volume of plastic bags currently used in the Study Area (approximately 552,931,362 plastic bags per year) would be replaced by approximately 6% paper bags and 89% reusable bags¹ under Alternative 3 (compared to 30% paper and 65% reusable assumed for the Proposed Ordinance). It is assumed

¹ Rates from City of San Jose Final EIR, SCH # 2009102095, October 2010.

that 5% of existing single-use plastic bags would remain in use, similar to the Proposed Ordinance, since the alternative would not apply to some retailers who distribute single-use plastic carryout bags (e.g., restaurants). Table 6-6 summarizes the anticipated changes in bag distribution as a result of a \$0.25 mandatory charge under this alternative compared to the \$0.10 charge under the Proposed Ordinance.

Table 6-6
Estimated Bag Use: Proposed Ordinance versus Alternative 3

Bag Type	Bags Used Annually	
	Proposed Ordinance*	Alternative 3**
Single-Use Plastic	27,646,568	27,646,568
Single-Use Paper	165,879,409	33,175,882
Reusable	6,911,642	9,463,633
Total	200,437,619	70,286,083

* Refer to Table 4.1-4 in Section 4.1, *Air Quality*.

** Based on an assumption of 5% existing plastic bag use in Study Area (approximately 552,931,362 plastic bags per year) to remain, 6% conversion of the volume of existing plastic bag use in Study Area to paper bags and 89% conversion to reusable bags (based on 52 uses per year).

6.3.2 Impact Analysis

a. Air Quality. As described in Section 4.1, *Air Quality*, it is anticipated that the Proposed Ordinance would replace the total volume of single-use plastic bags currently used in the Study Area with approximately 30% recyclable paper bags and 65% reusable bags, leaving 5% of the plastic bags in circulation (or approximately 27.6 million bags, as shown in Table 6-6 above). This alternative would increase the mandatory charge on paper bags by fifteen (\$0.15) cents and would therefore promote a greater shift toward reusable bags. Consequently, this alternative would reduce the number of paper bags and increase the number of reusable bags compared to the Proposed Ordinance. Because this alternative would apply to the same retailers as the Proposed Ordinance, the number of single-use plastic bags remaining in circulation would be the same. In total, Alternative 3 would result in approximately 132 million fewer bags (including single-use plastic, paper, and reusable) than the Proposed Ordinance. Air pollutant emissions associated with bag manufacturing, transportation, and disposal would therefore be reduced when compared to the Proposed Ordinance.

Table 6-7 estimates emissions that contribute to the development of ground level ozone and atmospheric acidification that would result from implementation of Alternative 3, as compared with the Proposed Ordinance. Because this alternative would reduce the number of paper bags in the Study Area, the contribution to ground level ozone would decrease by approximately 3,899 kg per year (a 67% decrease) and contribution to atmospheric acidification would decrease by approximately 265,071 kg per year (a 67% decrease) when compared to the Proposed Ordinance.

Table 6-7
Estimated Emissions that Contribute to Ground Level Ozone and
Atmospheric Acidification (AA) from Alternative 3

Bag Type	# of Bags Used per Year	Ozone Emission Rate per Bag	Ozone Emissions (kg) per 1,000 bags	Ozone Emissions per year (kg)	AA Emission Rate per Bag	AA Emissions (kg) per 1,000 bags	AA Emissions per year (kg)
Single-use Plastic	27,646,568	1.0	0.023	636	1.0	1.084	29,969
Single-use Paper	33,175,882	1.3	0.03	995	1.9	2.06	68,342
Reusable	9,463,633	1.4	0.032	303	3.0	3.252	30,776
Alternative 3 Total				1,934	Alternative 3 Total		129,087
Proposed Ordinance Total				5,833	Proposed Ordinance Total		394,158
Difference				(3,899)	Difference		(265,071)
Existing Total (without an Ordinance)				12,717	Existing (without an Ordinance)		599,378
Net Change of Alternative 3 (Alternative 3 Total minus Existing Total)				(10,783)	Net Change		(470,291)

Source: Refer to Table 4.1-5 in Section 4.1, Air Quality.

To estimate mobile emissions resulting from Alternative 3, the number of truck trips per day was calculated using the assumptions outlined in the Initial Study (Appendix A). As shown in Table 6-8, Alternative 3 would result in an estimated 252 truck trips per year, or 0.69 truck trips per day, which is lower than the Proposed Ordinance and would also be lower than the existing number of truck trips related to delivering single-use plastic bags.

Based on the estimated truck trips for Alternative 3, mobile emissions were calculated using the URBEMIS model. As indicated in Table 6-9, this alternative would reduce truck trips compared to existing conditions and would reduce daily emissions compared to the Proposed Ordinance. In addition, because mobile emissions would be reduced compared to existing conditions, these emissions would not exceed BAAQMD thresholds.

**Table 6-8
Estimated Truck Trips per Day
Following Implementation of Alternative 3**

Bag Type	Number of Bags per Year	Number of Bags per Truck Load*	Truck Trips Per Year	Truck Trips per Day
Single-use Plastic	27,646,568	2,080,000	13	0.036
Single-use Paper	33,175,882	217,665	152	0.417
Reusable	9,463,633	108,862	87	0.238
Alternative 3 Total			252	0.69
Proposed Ordinance Total			839	2.30
Difference			(587)	(1.61)
Existing Total for Plastic Bags (without an Ordinance)			(266)	(0.73)
Net Change of Alternative 3 (Alternative 3 Total minus Existing Total)			(14)	(.038)

*City of Santa Monica Single-Use Carryout Bag Ordinance EIR (SCH #2010041004), January 2011.
Refer to Appendix A.

**Table 6-9
Operational Emissions Associated with Alternative 3**

	Emissions (lbs/day)			
	ROG	NO _x	PM ₁₀	PM _{2.5}
Mobile Emissions: Proposed Ordinance	0.02	0.23	0.03	0.01
Mobile Emissions: Alternative 3	(<0.01)	(0.01)	(<0.01)	(<0.01)
<i>BAAQMD Thresholds</i>	54	54	82	54
Threshold Exceeded?	No	No	No	No

Source: URBEMIS 2007 calculations for Vehicle. See Appendix B for calculations
() = reduction of emissions compared to existing conditions.

Based on the above, Alternative 3 would reduce air quality impacts compared to the Proposed Ordinance. Impacts resulting from bag manufacturing and use (ground level ozone and atmospheric acidification) would continue to be Class IV, *beneficial*, while impacts relating to an increase in truck trips would be reduced to a Class IV *beneficial*, impact.

b. Biological Resources. Similar to the Proposed Ordinance, this alternative would prohibit certain Study Area retailers from distributing single-use plastic carryout bags, thereby incrementally reducing the amount of single-use plastic bag litter that could enter the marine environment and affect sensitive species. Compared to the Proposed Ordinance, this alternative would also further reduce the amount of paper bag litter that could enter the marine environment. Although paper bags are less likely to become litter compared to single-use plastic bags (refer to Section 4.2, *Biological Resources*), the net reduction of all bag types associated with this alternative would result in overall less litter entering the marine environment. As a result, the Class IV, *beneficial*, effects to marine species from Alternative 3 would be increased as compared to the Proposed Ordinance.

c. Greenhouse Gas Emissions. Compared to the Proposed Ordinance, this alternative would be expected to reduce the number of paper bags by approximately 132.7 million bags and increase the number of reusable bags by approximately 2.55 million. The number of single-use plastic bags would not change compared to the Proposed Ordinance. As noted in Section 4.3, *Greenhouse Gases*, the manufacturing, transportation, and disposal of each paper bag results in 3.3 times the emissions of a single-use plastic bag, while the manufacturing, transportation, and disposal of each reusable bag results in approximately 2.6 times the emissions of a single-use plastic bag. Although this alternative would increase the number of reusable bags by approximately 2.55 million, which would slightly increase GHG emissions, it would reduce number of paper bags to a greater extent (approximately 132.7 million bags). Table 6-10 provides an estimate of GHG emissions that would result from the reduction of carryout bags as a result of implementation of Alternative 3.

Table 6-10
Estimated Greenhouse Gas Emissions from Alternative 3

Bag Type	Estimated Number of Bags Used per Year	GHG Impact Rate per Bag	CO ₂ e (metric tons)	CO ₂ e per year (metric tons)	CO ₂ e per Person
Single-use Plastic	27,646,568	1.0	0.04 per 1,500 bags	737	0.0007
Single-use Paper	33,175,882	2.97	0.1188 per 1,000 bags	3,941	0.0037
Reusable	9,463,633	2.6	0.104 per 1,000 bags	984	0.00095
Alternative 3 Total				5,662	0.005
Proposed Ordinance Total				21,163	0.02
Difference				(15,941)	(0.015)
Existing Total (without an Ordinance)				14,745	0.014
Net Change of Alternative 3 (Alternative 3 Total minus Existing Total)				(9,083)	(0.009)

CO₂e = Carbon Dioxide Equivalent units
Source: Refer to Table 4.3-4 in Section 4.3, *Greenhouse Gas Emissions*.

Compared to the Proposed Ordinance, GHG emissions under Alternative 3 would decrease by approximately 0.015 CO₂e per person per year. In addition, compared to existing conditions without an Ordinance, this alternative would reduce GHG emissions by approximately 9,083 metric tons per year or approximately 0.009 CO₂e per person per year. Therefore GHG impacts from Alternative 3 would be reduced when compared to the Proposed Ordinance, and would be Class IV, *beneficial*, compared to existing conditions.

d. Hydrology and Water Quality. Similar to the Proposed Ordinance, this alternative would reduce the number of single-use plastic bags used in the Study Area, thereby incrementally reducing the amount of plastic litter and waste entering storm drains. In addition, this alternative would further reduce the number of paper bags compared to the Proposed Ordinance (by approximately 132.7 million bags), replacing them instead with approximately 2.55 million reusable bags. As a result, overall, this alternative would reduce litter compared to the Proposed Ordinance. As with the Proposed Ordinance, an incremental reduction in the amount of litter that could enter storm drains and local waterways would improve water quality and reduce the potential for storm drain blockage. Therefore, like the Proposed Ordinance, this alternative would result in Class IV, *beneficial*, effects to water quality. Overall benefits would be somewhat greater under this alternative since fewer paper bags would be used in the Study Area.

This alternative would be expected to result in the use of fewer single-use paper carryout bags in the Study Area as compared to the Proposed Ordinance. However, it would not completely eliminate paper bags. As with the Proposed Ordinance, paper bag manufacturing facilities would be required to adhere to NPDES Permit requirements, AB 258 and the California Health and Safety Code reducing impacts to water quality. Impacts to water quality from altering bag processing activities would be the same as the Proposed Ordinance and would continue to be Class III, *less than significant*.

e. Utilities and Service Systems. Compared to the Proposed Ordinance, this alternative would be expected to reduce the number of paper bags by approximately 132.7 million and increase the number of reusable bags by approximately 2.55 million. The number of single-use plastic bags would not change under this alternative. Because 36% more reusable bags would be used under this alternative as compared to the Proposed Ordinance, water demand and wastewater generation related to washing reusable bags would also increase by 36%. This equates to an estimated 145.86 AFY of water and a net increase of 130,211 gallons per day of wastewater. However, as noted in Section 4.5, *Utilities and Service Systems*, there are sufficient water supplies and wastewater facility capacity to meet this demand. Therefore, impacts would be slightly greater than those of the Proposed Ordinance, but would remain Class III, *less than significant*.

Using the more conservative solid waste generation rates from Boustead (as shown in Table 4.5-9 in Section 4.5, *Utilities and Service systems*), this alternative would generate a net decrease of 4.41 tons/day of solid waste (calculations are contained in Appendix C) compared to existing conditions. In comparison, the Proposed Ordinance would generate a net increase of 4.17 tons/day compared to existing conditions. Therefore, Alternative 3 would generate less solid waste than the Proposed Ordinance, would reduce solid waste compared to existing conditions,

and would not exceed the existing capacity at area landfills. Solid waste impacts would be reduced when compared to the Proposed Ordinance, and would be a Class IV, *beneficial impact*.

6.4 ALTERNATIVE 4: BAN ON BOTH SINGLE-USE PLASTIC AND PAPER CARRYOUT BAGS

6.4.1 Description

This alternative would prohibit all Study Area retail establishments (except restaurants and non-profit, charitable retailers) from providing single-use plastic and paper carryout bags to customers at the point of sale. It is anticipated that by also prohibiting paper carryout bags, this alternative ordinance would significantly reduce single-use paper carryout bags within the Study Area, and further promote the shift to the use of reusable bags by retail customers. By banning both single-use plastic and paper bags, customers would be forced to use reusable carryout bags. This may increase the number of reusable bags purchased within the Study Area.

By banning both single-use plastic and paper bags, it is assumed that the total volume of single-use plastic carryout bags currently used within the Study Area (approximately 552,931,362 plastic bags per year) would be replaced by approximately 37.7 million reusable bags under Alternative 4 (compared to 165 million paper and 6.9 million reusable bags assumed for the proposed Ordinance). It is assumed that 5% of existing single-use plastic bags would remain in use, similar to the Proposed Ordinance, since the alternative would not apply to some retailers who distribute plastic bags (e.g., restaurants). Table 6-11 summarizes the changes in bag distribution as a result of banning both single-use plastic and paper under this alternative compared to the Proposed Ordinance.

Table 6-11
Estimated Bag Use: Proposed Ordinance versus Alternative 4

Bag Type	Bags Used Annually	
	Proposed Ordinance	Alternative 4
Single-Use Plastic	27,646,568	27,646,568
Single-Use Paper	165,879,409	0
Reusable	6,911,642	10,101,631
Total	200,437,619	37,748,199

* Refer to Table 4.1-4 in Section 4.1, *Air Quality*.

** Based on an assumption of 5% existing plastic bag use in the Study Area (approximately 552,931,362 plastic bags per year) to remain, and 95% conversion to reusable bags (based on 52 uses per year).

6.4.2 Impact Analysis

a. Air Quality. As described in Section 4.1, *Air Quality*, it is anticipated that the Proposed Ordinance would replace the total volume of single-use plastic bags currently used in

the Study Area with approximately 165 million paper and 6.9 million reusable bags assumed for the Proposed Ordinance (or 95% of the plastic bags), leaving 5% of the plastic bags in circulation (or approximately 27.6 million bags, as shown in Table 6-11 above). This alternative would prohibit all retail establishments (except restaurants and non-profit, charitable retailers) from providing single-use plastic or paper carryout bags to customers at the point of sale, and would therefore promote a greater shift toward reusable bags. Consequently, this alternative would reduce the number of paper bags and increase the number of reusable bags compared to the Proposed Ordinance. Because this alternative would apply to the same retailers as the Proposed Ordinance, the number of single-use plastic bags remaining in circulation would be the same. In total, Alternative 4 would result in approximately 162 million fewer bags (including single-use plastic, paper, and reusable) than the Proposed Ordinance. Air pollutant emissions associated with bag manufacture, transportation, and disposal would therefore be reduced when compared to the Proposed Ordinance. Table 6-12 estimates emissions that contribute to the development of ground level ozone and atmospheric acidification that would result from implementation of Alternative 4, as compared with the Proposed Ordinance.

Table 6-12
Estimated Emissions that Contribute to Ground Level Ozone and
Atmospheric Acidification (AA) from Alternative 4

Bag Type	# of Bags Used per Year	Ozone Emission Rate per Bag	Ozone Emissions (kg) per 1,000 bags	Ozone Emissions per year (kg)	AA Emission Rate per Bag	AA Emissions (kg) per 1,000 bags	AA Emissions per year (kg)
Single-use Plastic	27,646,568	1.0	0.023	636	1.0	1.084	29,969
Single-use Paper	0	1.3	0.03	0	1.9	2.06	0
Reusable	10,101,631	1.4	0.032	323	3.0	3.252	32,851
Alternative 4 Total				959	Alternative 4 Total		62,820
Proposed Ordinance Total				5,833	Proposed Ordinance Total		394,158
Difference				(4,874)	Difference		(331,338)
Existing Total (without an Ordinance)				12,717	Existing Total (without an Ordinance)		599,378
Net Change of Alternative 4 (Alternative 4 Total minus Existing Total)				(11,758)	Net Change of Alternative 4 (Alternative 4 Total minus Existing Total)		(536,558)

Source: Refer to Table 4.1-5 in Section 4.1, Air Quality.

As shown in Table 6-12, because this alternative would reduce the number of paper bags and the total number of bags used in the Study Area, the contribution to ground level ozone would

decrease by approximately 4,874 kg per year (an 84% decrease) and the contribution to atmospheric acidification would decrease by approximately 331,338 kg per year (an 84% decrease) when compared to the Proposed Ordinance.

To estimate mobile emissions resulting from Alternative 4, the number of truck trips per day was calculated using the assumptions outlined in the Initial Study (Appendix A). As shown in Table 6-13, Alternative 4 would result in an estimated 106 truck trips per year, or 0.29 truck trips per day, which is lower than the Proposed Ordinance and would also be lower than the existing number of truck trips related to delivering single-use plastic bags.

Table 6-13
Estimated Truck Trips per Day
Following Implementation of Alternative 4

Bag Type	Number of Bags per Year	Number of Bags per Truck Load*	Truck Trips Per Year	Truck Trips per Day
Single-use Plastic	27,646,568	2,080,000	13	0.036
Single-use Paper	0	217,665	0	0
Reusable	10,101,631	108,862	93	0.254
Alternative 3 Total			106	0.29
Proposed Ordinance Total			839	2.3
Difference			(733)	(2.01)
Existing Total for Plastic Bags (without an Ordinance)			266	0.73
Net Change of Alternative 3 (Alternative 3 Total minus Existing Total)			(160)	(.438)

*City of Santa Monica Single-Use Carryout Bag Ordinance EIR (SCH #2010041004), January 2011.
Refer to Appendix A.

Based on the estimated truck trips for Alternative 4, mobile emissions were calculated using the URBEMIS model. As indicated in Table 6-14 on the following page, this alternative would reduce truck trips and reduce daily emissions compared to the Proposed Ordinance. In addition, because truck trips and the associated mobile emissions would be reduced compared to existing conditions, these emissions would not exceed BAAQMD thresholds.

Based on the above, Alternative 4 would reduce air quality impacts compared to the Proposed Ordinance. Impacts resulting from bag manufacturing and use (ground level ozone and atmospheric acidification) would continue to be Class IV, *beneficial*, while impacts relating to a truck trips would be reduced to Class IV *beneficial*, since truck trips and the associated emissions would actually be reduced under this alternative compared to existing conditions.

Table 6-14
Operational Emissions Associated with Alternative 4

	Emissions (lbs/day)			
	ROG	NO _x	PM ₁₀	PM _{2.5}
Mobile Emissions: Proposed Ordinance	0.02	0.23	0.03	0.01
Mobile Emissions: Alternative 4	(<0.01)	(0.06)	(0.01)	(<0.01)
<i>BAAQMD Thresholds</i>	54	54	82	54
Threshold Exceeded?	No	No	No	No

Source: URBEMIS 2007 calculations for Vehicle. See Appendix B for calculations
 () = reduction of emissions compared to existing conditions.

b. Biological Resources. This alternative would ban both single-use plastic and paper carryout bags from certain retailers, thereby reducing the amount of single-use plastic and paper bag litter that could enter the marine environment and affect sensitive species. Compared to the Proposed Ordinance, this alternative would further reduce the amount of paper bag litter that could enter the marine environment. Although paper bags are less likely to become litter compared to single-use plastic bags (refer to Section 4.2, *Biological Resources*), the net reduction of all bag types associated with this alternative would result in overall less litter entering the marine environment. As a result, the Class IV, *beneficial*, effects to marine species from Alternative 4 would be increased as compared to the Proposed Ordinance.

c. Greenhouse Gas Emissions. Compared to the Proposed Ordinance, this alternative would be expected to reduce the number of paper bags by approximately 166 million bags and increase the number of reusable bags by approximately 3.2 million. The number of single-use plastic bags would not change under this alternative. As noted in Section 4.3, *Greenhouse Gases*, the manufacture, transport, and disposal of each paper bag results in 3.3 times the emissions of a single-use plastic bag, while the manufacturing, transportation, and disposal of each reusable bag results in approximately 2.6 times the emissions of a single-use plastic bag. The increased use of reusable bags would slightly increase GHG emissions, while the significantly reduced use of paper bags would more than offset this impact.

Table 6-15 on the following page provides an estimate of GHG emissions that would result from the reduction of carryout bags as a result of implementation of Alternative 3.

Compared to the proposed Ordinance, GHG emissions under Alternative 4 would decrease by approximately 0.019 CO₂e per person per year. In addition, compared to existing conditions without an Ordinance, this alternative would reduce GHG emissions by approximately 12,697 metric tons per year or approximately 0.012 CO₂e per person per year. Therefore, GHG impacts associated with Alternative 4 would be reduced when compared to the Proposed Ordinance, and would be Class IV, *beneficial*, compared to existing conditions.

**Table 6-15
Estimated Greenhouse Gas Emissions
from Alternative 4**

Bag Type	Estimated Number of Bags Used per Year	GHG Impact Rate per Bag	CO₂e (metric tons)	CO₂e per year (metric tons)	CO₂e per Person
Single-use Plastic	27,646,568	1.0	0.04 per 1,500 bags	737	0.0007
Single-use Paper	0	2.97	0.1188 per 1,000 bags	0	0
Reusable	10,101,631	2.6	0.104 per 1,000 bags	1,051	0.001
Alternative 4 Total				1,788	0.0017
Proposed Ordinance Total				21,163	0.02
Difference				(19,375)	(0.019)
Existing Total (without an Ordinance)				14,745	0.014
Net Change of Alternative 4 (Alternative 4 Total minus Existing Total)				(12,697)	(0.012)

CO₂e = Carbon Dioxide Equivalent units

Source: Refer to Table 4.3-4 in Section 4.3, Greenhouse Gas Emissions.

d. Hydrology and Water Quality. Similar to the Proposed Ordinance, this alternative would reduce the number of single-use plastic bags used in the Study Area, thereby incrementally reducing the amount of plastic litter and waste entering storm drains. In addition, this alternative would reduce the number of paper bags compared to the Proposed Ordinance (by approximately 166 million bags), replacing them instead with approximately 4.2 million reusable bags. As a result, this alternative would reduce overall litter compared to the Proposed Ordinance. As with the Proposed Ordinance, an incremental reduction in the amount of litter that could enter storm drains and local waterways would improve water quality and reduce the potential for storm drain blockage. Therefore, like the Proposed Ordinance, this alternative would result in Class IV, *beneficial*, effects to water quality. Overall benefits would be somewhat greater under this alternative since fewer paper bags would be used in the Study Area.

This alternative would prohibit retailers (except restaurants) from providing paper carryout bags within the Study Area. This alternative would actually reduce the number of paper bags manufactured for use in the region. Thus, impacts to water quality from altering bag processing activities would be reduced under this alternative compared to the Proposed Ordinance which would increase paper bag use. In addition, under this alternative, paper bag use would be reduced compared to existing conditions since single-use paper bags are currently used throughout the Study Area. Thus, this alternative would result in a Class IV, *beneficial impact*.

e. Utilities and Service Systems. Compared to the Proposed Ordinance, this alternative would be expected to reduce the number of paper bags by approximately 166 million and increase the number of reusable bags by approximately 4.2 million. The number of single-use plastic bags would not change under this alternative. Because 46% more reusable bags would be used under this alternative as compared to the Proposed Ordinance, water demand and wastewater generation associated with washing reusable bags would also increase by 46%. This equates to a net increase of 182.4 AFY of water and a net increase of 162,823 gallons per day of wastewater. However, as noted in Section 4.5, *Utilities and Service Systems*, there are sufficient water supplies and wastewater treatment capacity to meet this demand. Therefore, impacts would be slightly greater than those of the Proposed Ordinance, but would remain Class III, *less than significant*.

Using the more conservative solid waste generation rates from Boustead (as shown in Table 4.5-9 in Section 4.5, *Utilities and Service systems*), this alternative would generate a reduction of 6.56 tons/day of solid waste compared to existing conditions (calculations are contained in Appendix C). In comparison, the Proposed Ordinance would generate 4.14 tons/day. Therefore, Alternative 3 would generate less solid waste than the Proposed Ordinance, would reduce solid waste compared to existing conditions, and would not exceed the existing capacity at area landfills. Therefore, solid waste impacts would be reduced when compared to the Proposed Ordinance, and would be Class IV, *beneficial*.

6.5 ALTERNATIVES CONSIDERED BUT REJECTED

As required by Section 15126.6 (c) of the *CEQA Guidelines*, this subsection identifies those alternatives that were considered but rejected by the lead agency because they either did not meet the objectives of the project or could not avoid or substantially lessen one or more of the significant effects.

Seven alternatives that were considered were rejected as infeasible for not meeting the basic project objectives. The first alternative involves a suggestion during the Public Scoping Meetings that rather than a ban on plastic bags, there should be additional litter removal programs, education efforts, enforcement for littering, and recycling programs for plastic bags. *CEQA Guidelines* § 15126.6 requires that an EIR consider a range of reasonable alternatives to a proposed project, which would feasibly obtain most of the basic objectives of the project but would avoid or substantially lessen any of the significant effects of the project. This alternative was rejected because it does not achieve the Ordinance's objectives, including deterring the use of paper bags and promoting a shift toward the use of reusable bags. Objectives of the Proposed Ordinance are outlined in Section 2.0, *Project Description*.

The second alternative that was considered, but ultimately rejected, is to ban styrofoam (polystyrene) in addition to banning single use-plastic carryout bags. This alternative would not achieve the Proposed Ordinance's objectives of reducing the environmental impacts related to single-use plastic bags or reduce any of the Proposed Ordinance's environmental effects. Environmental impacts related to polystyrene use are outside the scope and objectives of the proposed action.

The third alternative that was considered, but ultimately rejected, is to ban single-use plastic carryout bags, but not charge for paper bags at retailers in the Study Area. This alternative was rejected because it would not deter customers from using paper bags, which have greater impacts related to air quality, GHG emissions, and water quality than plastic bags on a per bag basis. In addition, this alternative would not achieve the Proposed Ordinance's objective of promoting a shift toward the use of reusable carryout bags by retail customers to as great a degree as would occur with the Proposed Ordinance.

The fourth alternative considered, but ultimately rejected, involves a suggestion that use of single-use plastic carryout bags by retailers (except restaurants) be banned, with the exception of plastic bags made with biodegradable or compostable additives that would be allowed for use by Study Area retail establishments. This alternative was rejected from consideration because the environmental impacts associated with using biodegradable and compostable additives are uncertain at this time. Researchers at California State University Chico Research Foundation tested the degradation of biodegradable bags in composting conditions, and found that they did not degrade (CIWMB 2007; Green Cities California MEA, 2010). Furthermore, these bags reduce the quality of recycled plastics when introduced into the recycling stream and so must be kept separate to avoid contaminating the recycling stream (CIWMB 2007; Green Cities California MEA, 2010). Therefore it is unclear what environmental impacts may be associated with switching to plastic bags made with biodegradable additives or water soluble bags. In addition, this alternative would not achieve the objectives of reducing the amount of single-use plastic bags in trash loads (e.g., landfills), in conformance with the trash load reduction requirements of the NPDES Municipal Regional Permit, promoting a shift toward the use of reusable carryout bags by retail customers, and avoiding litter and the associated adverse impacts to stormwater systems, aesthetics and the marine environment (San Francisco Bay and the Pacific Ocean).

The fifth alternative considered, but ultimately rejected, involves a suggestion that the Ordinance also apply to "doggie waste cleanup" bags at public parks. While plastic "doggie waste cleanup" bags may have certain impacts to the environment, it is assumed that these types of bags represent only a very small percentage of total plastic bag use. In contrast, the use of these types of bags promote the proper disposal of solid waste and benefit water quality in reducing sources of stormwater pollution. Thus, while this alternative would further reduce the overall number of plastic bags produced and used, it would not promote a shift toward the use of reusable carryout bags by retail customers in the Study Area and could potentially increase impacts to stormwater systems. Environmental impacts related to plastic "doggie waste cleanup" bag use in the Study Area are outside the scope and objectives of the Proposed Ordinance.

The sixth alternative considered, but ultimately rejected, involves a suggestion of an action that targets litter from homeless encampments near water bodies. This alternative would not achieve the objectives of reducing the amount of single-use plastic bags in trash loads (e.g., landfills), in conformance with the trash load reduction requirements of the NPDES Municipal Regional Permit and promoting a shift toward the use of reusable carryout bags by retail customers.

The seventh alternative considered, but ultimately rejected, involves a suggestion that retailers offer incentives for customers to use reusable bags (such as paying customers) rather than

banning single-use bags. While this alternative may deter some customers from using single-use plastic and paper bags, it may not promote the shift to reusable carryout bags by retail customers as effectively and would place a financial burden on the Study Area retailers.

6.6 ENVIRONMENTALLY SUPERIOR ALTERNATIVE

This subsection identifies the environmentally superior alternative. Alternative 4, the Ban on Both Single-use Plastic and Paper Carryout Bags alternative, would be considered environmentally superior among the alternatives, as it would have greater overall environmental benefits compared to the Proposed Ordinance. In addition, this alternative would result in beneficial effects to the environment compared to existing conditions in the areas of air quality, biological resources, GHG emissions, hydrology/water quality and utilities and service systems. This alternative would also meet the project objectives, including:

- Reducing the amount of single-use plastic bags in trash loads (e.g., landfills), in conformance with the trash load reduction requirements of the NPDES Municipal Regional Permit
- Reducing the environmental impacts related to single-use plastic carryout bags, such as impacts to biological resources (including marine environments), water quality and utilities (solid waste)
- Deterring the use of paper bags by customers in the respective jurisdictions
- Promoting a shift toward the use of reusable carryout bags by retail customers in the respective jurisdictions
- Avoiding litter and the associated adverse impacts to stormwater systems, aesthetics and the marine environment (San Francisco Bay and the Pacific Ocean)

It should be noted that the Proposed Ordinance would not have any significant impacts; therefore, adopting Alternative 4 (Ban on Both Single-use Plastic and Paper Carryout Bags) rather than the Proposed Ordinance would not avoid any significant environmental effects.

Table 6-16 compares the impacts for each of the alternatives with the impacts associated with the Proposed Ordinance.

Table 6-16
Impact Comparison of Alternatives with the Proposed Ordinance

Issue	Proposed Ordinance	Alt 1: No Project	Alt 2: Ban on Plastic Bags at all Retail Establishments	Alt 3: Mandatory Charge of \$0.25 for Paper Bags	Alt 4: Ban on Both Single-use Plastic and Paper Carryout Bags
Air Quality	=	-	= / -	+	+
Biological Resources	=	-	= / +	= / +	= / +
Greenhouse Gas Emissions	=	= / +	= / -	+	+
Hydrology/Water Quality	=	-	= / +	= / +	+

**NOTICE OF PREPARATION
OF A DRAFT ENVIRONMENTAL IMPACT REPORT
COUNTY OF SAN MATEO SINGLE USE BAG BAN ORDINANCE**

DATE: April 6, 2012

TO: State Clearinghouse, Responsible Agencies, Organizations and Interested Parties

LEAD AGENCY: County of San Mateo

The County of San Mateo intends to prepare an Environmental Impact Report (EIR) for a proposed Single Use Bag Ban Ordinance. In accordance with Section 15082 of the State CEQA Guidelines, the County of San Mateo has prepared this Notice of Preparation to provide Responsible Agencies and other interested parties with information describing the proposal and its potential environmental effects. The County has prepared the attached Project Description. The environmental factors that the County has determined would potentially be affected by the project include:

- Air Quality
- Biological Resources
- Greenhouse Gas Emissions
- Hydrology/Water Quality
- Utilities and Service Systems

PROJECT SPONSOR: County of San Mateo Health System
Environmental Health Services
2000 Alameda de las Pulgas, Suite 100
San Mateo, CA 94403
Contact: Dean D. Peterson, Director
(650) 372-6200

PROJECT LOCATIONS: The Single Use Bag Ban Ordinance would apply to any commercial establishment that sells perishable or nonperishable goods, including, but not limited to, clothing, food, and personal items directly to the customer; and is located within or doing business within the geographical limits of unincorporated San Mateo County and within the following participating municipalities:

San Mateo County

- Belmont
- Brisbane
- Burlingame
- Colma
- Daly City
- East Palo Alto
- Foster City
- Half Moon Bay
- Menlo Park
- Millbrae
- Pacifica
- Portola Valley
- Redwood City
- San Bruno
- San Carlos
- San Mateo
- South San Francisco
- Woodside

Santa Clara County

- Milpitas
- Cupertino
- Los Gatos
- Los Altos
- Campbell
- Mountain View

PROJECT DESCRIPTION: The proposed Single Use Bag Ban Ordinance (Proposed Ordinance) would regulate the use of paper and plastic single use carryout bags within the participating municipalities. Participating municipalities include the County of San Mateo and 24 cities in San Mateo and Santa Clara counties (see list above under "Project Locations"). The Proposed Ordinance would apply to all retail establishments located within the limits of the participating municipalities, including those selling clothing, food, and personal items directly to the customer. It would not apply to restaurants. The ordinance would (1) prohibit the free distribution of single use

carryout paper and plastic bags and (2) require retail establishments to charge customers for recycled paper bags and reusable bags at the point of sale. The minimum charge would be ten cents (\$0.10) until December 31, 2014 and twenty-five cents (\$0.25) on or after January 1, 2015.

The intent of the ordinance is to reduce the environmental impacts related to the use of single use carryout bags, and to promote a shift toward the use of reusable bags. It is anticipated that by prohibiting single use plastic carryout bags and requiring a mandatory charge for each paper bag distributed by retailers, the Proposed Ordinance would provide a disincentive to customers to request paper bags when shopping at regulated stores and promote a shift to the use of reusable bags by retail customers, while reducing the number of single use plastic and paper bags within the participating municipalities.

Single use plastic carryout bags are defined as bags made from petroleum or bio-based plastic¹ that are less than 2.25 millimeters thick. The Proposed Ordinance would prohibit retailers from distributing both petroleum and bio-based single use carryout plastic bags at the point of sale. The Proposed Ordinance would not prohibit the distribution of plastic “product bags”, as defined, which includes bags without handles provided to a customer (1) to transport prepared food, produce, bulk food or meat from a department within a store to the point of sale; (2) to hold prescription medication dispensed from a pharmacy; or (3) to segregate food or merchandise that could damage or contaminate other food or merchandise when placed together in a reusable bag or recycled paper bag. The ordinance would not apply to restaurants and other food service providers, allowing them to provide plastic bags to customers for prepared take-out food intended for consumption off of the food provider’s premises.

As noted above, the Proposed Ordinance would require regulated retailers to impose a mandatory charge for each paper carryout bag provided. Retail establishments would be required to keep complete an accurate record (including documents of the purchase and sale of any recycled paper bag or reusable bag) for a minimum period of three years from the date of purchase and sale. The record must be available for inspection during regular business hours by any County employee authorized to enforce this part at no cost to the County. The charge would be retained by the affected stores to compensate the stores for increased costs related to compliance with the ordinance, actual costs associated with providing recyclable paper carryout bags or reusable bags, and costs associated with a store’s educational materials or education campaign encouraging the use of reusable bags.

REVIEW PERIOD: As specified by the State CEQA Guidelines, the Notice of Preparation will be circulated for a 30-day review period. The Lead Agency welcomes agency and public input during this period regarding the scope and content of environmental information that must be included in the Draft EIR. **Responses to this Notice of Preparation may be submitted, in writing, by 5:30 p.m. on May 6, 2012, to:**

Camille M. Leung, Planner
Planning and Building Department
455 County Center, Second Floor
Redwood City, CA 94063

ENVIRONMENTAL EVALUATION CHECKLIST
(To Be Completed By Current Planning Section)

I. BACKGROUND

Project Title: County of San Mateo Single-Use Bag Ban Ordinance

File No.: PLN2012-00136

Project Location: The Single-Use Bag Ban Ordinance (“Proposed Ordinance”) would apply to any commercial establishment that sells perishable or nonperishable goods, including, but not limited to, clothing, food, and personal items directly to the customer; and is located within or doing business within the geographical limits of unincorporated San Mateo County and within the following participating municipalities:

San Mateo County

- Belmont
- Brisbane
- Burlingame
- Colma
- Daly City
- East Palo Alto
- Foster City
- Half Moon Bay
- Menlo Park
- Millbrae
- Pacifica
- Portola Valley
- Redwood City
- San Bruno
- San Carlos
- San Mateo
- South San Francisco
- Woodside

Santa Clara County

- Milpitas
- Cupertino
- Los Gatos
- Los Altos
- Campbell
- Mountain View

For the purposes of this Initial Study, the geographical limits of unincorporated San Mateo County and all of the participating municipalities listed above shall be known as the “Study Area”.

Assessor’s Parcel No.: Multiple parcels

Applicant/Owner: County of San Mateo

Date Environmental Information Form Submitted: May 23, 2012

PROJECT DESCRIPTION

The proposed Single Use Bag Ban Ordinance ("Proposed Ordinance") would regulate the use of paper and plastic single-use carryout bags within the participating municipalities. Participating municipalities include the County of San Mateo and 24 cities in San Mateo and Santa Clara counties (see list above in 2.2 Project Location). For the purposes of this Program EIR, the geographical limits of unincorporated San Mateo County and all of the participating municipalities listed above shall be known as the "Study Area". The Proposed Ordinance would apply to all retail establishments located within the limits of the Study Area, including those selling clothing, food, and personal items directly to the customer. It would not apply to restaurants. The Proposed Ordinance would (1) prohibit the free distribution of single-use carryout paper and plastic bags and (2) require retail establishments to charge customers for recycled paper bags and reusable bags at the point of sale. The minimum charge would be ten cents (\$0.10) per paper bag until December 31, 2014 and twenty-five cents (\$0.25) per paper bag on or after January 1, 2015.

The intent of the Proposed Ordinance is to reduce the environmental impacts related to the use of single-use carryout bags, and to promote a shift toward the use of reusable bags. It is anticipated that by prohibiting single-use plastic carryout bags and requiring a mandatory charge for each paper bag distributed by retailers, the Proposed Ordinance would provide a disincentive to customers to request paper bags when shopping at regulated stores and promote a shift to the use of reusable bags by retail customers, while reducing the number of single-use plastic and paper bags within the Study Area.

Single-use plastic carryout bags are defined as bags made from petroleum or bio-based plastic that are less than 2.25 mils thick (0.00225 inches). The Proposed Ordinance would prohibit retailers from distributing both petroleum and bio-based single-use carryout plastic bags at the point of sale. The Proposed Ordinance would not prohibit the distribution of plastic "product bags", as defined, which includes bags without handles provided to a customer (1) to transport prepared food, produce, bulk food or meat from a department within a store to the point of sale; (2) to hold prescription medication dispensed from a pharmacy; or (3) to segregate food or merchandise that could damage or contaminate other food or merchandise when placed together in a reusable bag or recycled paper bag. The Proposed Ordinance would not apply to restaurants and other food service providers, allowing them to provide plastic bags to customers for prepared take-out food intended for consumption off of the food provider's premises.

As noted above, the Proposed Ordinance would require regulated retailers to impose a mandatory charge for each paper carryout bag provided. Retail establishments would be required to keep complete an accurate record (including documents of the purchase and sale of any recycled paper bag or reusable bag) for a minimum period of three years from the date of purchase and sale. The record must be available for inspection during regular business hours by any County employee authorized to enforce this part at no cost to the County. The charge would be retained by the affected stores to compensate the stores for increased costs related to compliance with the Proposed Ordinance, actual costs associated with providing recyclable paper carryout bags or reusable bags, and costs associated with a store's educational materials or education campaign encouraging the use of reusable bags.

II. ENVIRONMENTAL ANALYSIS

Any controversial answers or answers needing clarification are explained on an attached sheet. For source, refer to pages 11 and 12.

	IMPACT					Source
	YES					
	NO	Not Significant	Significant Unless Mitigated	Significant	Cumulative	
1. LAND SUITABILITY AND GEOLOGY						
Will (or could) this project:						
a. Involve a unique landform or biological area, such as beaches, sand dunes, marshes, tidelands, or San Francisco Bay?	X					B,F,O,I (1)
b. Involve construction on slope of 15% or greater?	X					E,I,R (State) ,I (1)
c. Be located in an area of soil instability (subsidence, landslide or severe erosion)?	X					Bc,D,R (State) ,I (1)
d. Be located on, or adjacent to a known earthquake fault?	X					Bc,D,R (State) ,I (1)
e. Involve Class I or Class II Agriculture Soils and Class III Soils rated good or very good for artichokes or Brussels sprouts?	X					M,R (State) ,I (1)
f. Cause erosion or siltation?	X					M,I,R (State) ,I (1)
g. Result in damage to soil capability or loss of agricultural land?	X					A,M,R (State) ,I (1)

	IMPACT					Source
	YES					
	NO	Not Significant	Significant Unless Mitigated	Significant	Cumulative	
h. Be located within a flood hazard area?	X					G,Q (1) ,I (1)
i. Be located in an area where a high water table may adversely affect land use?	X					D
j. Affect a natural drainage channel or streambed, or watercourse?	X					E,Q (1)

Further Discussion:

a. The Proposed Ordinance would prohibit retail establishments (excluding restaurants) in the Study Area, from distributing single-use carryout paper and plastic bags at no charge, and would create a mandatory 10 cent (\$0.10) charge for each recycled paper and reusable bag distributed by these stores at the point of sale. The intent of the Proposed Ordinance is to reduce the environmental impacts related to the use of single-use plastic bags, and to promote a shift toward the use of reusable bags. The Proposed Ordinance would not involve any physical development; therefore, it would not involve a unique landform or biological area. **No impact** would occur and further analysis of this issue in an EIR is not warranted.

b-g. The Proposed Ordinance would prohibit retail establishments (excluding restaurants) in the Study Area, from distributing single-use carryout paper and plastic bags at no charge, and would create a mandatory 10 cent (\$0.10) charge for each recycled paper and reusable bag distributed by these stores at the point of sale. The Proposed Ordinance would not involve any physical development or construction activity; therefore, it would not involve construction on a slope of 15% or greater, be located on or adjacent to a known earthquake fault, involve Class I, II or III Agricultural Soils, nor would it cause erosion or siltation. In addition, the Proposed Ordinance would not increase the potential for landslide, lateral spreading, subsidence, liquefaction, or collapse, and would not place structures or people in areas that are located on expansive soil, as defined in the Uniform Building Code. Furthermore, the Proposed Ordinance would not result in damage to soil capability or the loss of agricultural land. **No impact** would occur and further analysis of these issues in an EIR is not warranted.

h-j. The Proposed Ordinance would prohibit retail establishments (excluding restaurants) in the Study Area, from distributing single-use carryout paper and plastic bags at no charge, and would create a mandatory 10 cent (\$0.10) charge for each recycled paper and reusable bag distributed by these stores at the point of sale. The Proposed Ordinance would not involve any physical development or construction activity; therefore, it would not be located in a flood hazard zone or in an area where a high water table may adversely affect land use. Furthermore, the Proposed Ordinance would not affect a natural drainage channel, streambed or watercourse. **No impact** would occur and further analysis of these issues in an EIR is not warranted.

	IMPACT					Source
	Yes					
	NO	Not Significant	Significant Unless Mitigated	Significant	Cumulative	
2. VEGETATION AND WILDLIFE						
Will (or could) this project:						
a. Affect federal or state listed rare or endangered species of plant life in the project area?	X					F,Q (1)
b. Involve cutting of heritage or significant trees as defined in the County Heritage Tree and Significant Tree Ordinance?	X					I,A,Q (1)
c. Be adjacent to or include a habitat food source, water source, nesting place or breeding place for a federal or state listed rare or endangered wildlife species?				X		F,Q (1)
d. Significantly affect fish, wildlife, reptiles, or plant life?				X		I,Q (1)
e. Be located inside or within 200 feet of a marine or wildlife reserve?	X					E,F,O,Q (1)
f. Infringe on any sensitive habitats?				X		F,Q (1)
g. Involve clearing land that is 5,000 sq. ft. or greater (1,000 sq. ft. within a County Scenic Corridor), that has slopes greater than 20% or that is in a sensitive habitat or buffer zone?	X					I,F,Bb,I (1)

Further Discussion:

a. The Proposed Ordinance would not include any physical development or construction activity and, therefore, would not alter or remove any existing riparian habitat or plant life in the Study Area. As such, the Proposed Ordinance would not adversely affect any state listed or any federally listed rare or endangered species of plant life. **No impact** would occur and further analysis of this issue in an EIR is not warranted.

b. The Proposed Ordinance is intended to reduce the amount of single-use plastic and paper bags and to promote a shift toward the use of

reusable bags by retail customers. The Proposed Ordinance would not involve any physical development or construction activities that would conflict with the County Heritage Tree and Significant Tree Ordinance protecting heritage or significant trees, including trees. **No impact** would occur and further analysis of this issue in an EIR is not warranted.

e. The Proposed Ordinance is intended to reduce the amount of single-use plastic and paper bags and to promote a shift toward the use of reusable bags by retail customers. The Proposed Ordinance would not involve any physical development or construction activities that would be located inside or within 200 feet of a marine or wildlife reserve. **No impact** would occur and further analysis of this issue in an EIR is not warranted.

c, d, f. The Proposed Ordinance is intended to reduce the use of single-use plastic and paper bags and to promote a shift in the use of reusable bags by retail customers. Although there is low potential for adverse effects to wildlife resources or their habitat, by promoting a shift toward the use of reusable bags, the Proposed Ordinance could potentially affect wildlife species or sensitive habitats if reusable bags are improperly disposed of and become litter that enters the storm drain system and ultimately into coastal and marine environments. The Proposed Ordinance's impact related to sensitive species or habitats is **potentially significant** and will be further analyzed in an EIR.

g. The Proposed Ordinance would not involve any physical development or construction activities that would involve clearing land that is 5,000 square feet or greater, that has slopes greater than 20%, that is in a sensitive habitat or buffer zone, nor would the proposed ordinance conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan. **No impact** would occur and further analysis of this issue in an EIR is not warranted.

	IMPACT					Source
	Yes					
	NO	Not Significant	Significant Unless Mitigated	Significant	Cumulative	
3. PHYSICAL RESOURCES						
Will (or could) this project:						
a. Result in the removal of a natural resource for commercial purposes (including rock, sand, gravel, oil, trees, minerals or topsoil)?	X					I,Q (1),I (1)
b. Involve grading in excess of 150 cubic yards?	X					I,Q (1) ,I (1)
c. Involve lands currently protected under the Williamson Act (agricultural preserve) or an Open Space Easement?	X					I,Q (1) ,I (1)

	IMPACT					Source
	Yes					
	NO	Not Significant	Significant Unless Mitigated	Significant	Cumulative	
d. Affect any existing or potential agricultural uses?	X					A,K,M ,I (1)

Further Discussion:

a-b. The Proposed Ordinance would prohibit retail establishments (excluding restaurants) in the Study Area, from distributing single-use carryout paper and plastic bags at no charge, and would create a mandatory 10 cent (\$0.10) charge for each recycled paper and reusable bag distributed by these stores at the point of sale. The intent of the Proposed Ordinance is to reduce the environmental impacts related to the use of single-use plastic bags, and to promote a shift toward the use of reusable bags by retail customers.

The Proposed Ordinance would not include development of any physical structures or involve any construction activity. As such, the Proposed Ordinance would not remove natural resources such as rocks, sand, gravel, oil, trees, minerals or topsoil. In addition, since the Proposed Ordinance would not change any existing land use or add any physical development or new structures within the Study Area, it would not involve grading in excess of 150 cubic yards. **No impact** would occur and further analysis of this issue in an EIR is not warranted.

c-d. The Proposed Ordinance would prohibit retail establishments (excluding restaurants) in the Study Area, from distributing single-use carryout paper and plastic bags at no charge, and would create a mandatory 10 cent (\$0.10) charge for each recycled paper and reusable bag distributed by these stores at the point of sale. The Proposed Ordinance would not include any physical development or change any existing land uses currently protected under the Williamson Act, or an Open Space Easement. **No impact would** occur and further discussion of this issue in an EIR is not warranted.

	IMPACT	Source

	Yes					
	NO	Not Significant	Significant Unless Mitigated	Significant	Cumulative	
4. AIR QUALITY, WATER QUALITY, SONIC						
Will (or could) this project:						
a. Generate pollutants (hydrocarbon, thermal odor, dust or smoke particulates, radiation, etc.) that will violate existing standards of air quality on-site or in the surrounding area?				X		I,N,R,Q (1) ,I (1)
b. Involve the burning of any material, including brush, trees and construction materials?	X					I,I (1),Q (1)
c. Be expected to result in the generation of noise levels in excess of those currently existing in the area, after construction?		X				Ba,I,I (1),Ca
d. Involve the application, use or disposal of potentially hazardous materials, including pesticides, herbicides, other toxic substances, or radioactive material?	X					I,I (1),R (State)
e. Be subject to noise levels in excess of levels determined appropriate according to the County Noise Ordinance or other standard?		X				A,Ba,Bc,Ca
f. Generate noise levels in excess of levels determined appropriate according to the County Noise Ordinance standard?		X				I,I (1) ,Ca
g. Generate polluted or increased surface water runoff or affect groundwater resources?				X		I,I (1)
h. Require installation of a septic tank/leachfield sewage disposal system or require hookup to an existing collection system which is at or over capacity?	X					S,B a(2)

Further Discussion:

a. The Proposed Ordinance does not include any new buildings or other physical development and; therefore, would not entail any construction activity. As such, the Proposed Ordinance would not generate temporary construction emissions. Although the Proposed Ordinance is intended to reduce the amount of single-use plastic and paper bags in the Study Area, a potential change in the number of truck trips associated with delivering carryout bags to retailers and the additional use of reusable bags could generate pollutants that will violate existing air quality standards and increase long-term operational emissions. In addition, although overall carryout bag use is anticipated to decline as a result of the Proposed Ordinance, the EIR will also analyze whether the shift toward reusable bags could potentially alter processing activities in the Study Area related to bag production, which may increase air emissions. Impacts related to long-term emissions are **potentially significant** and will be further analyzed in an EIR.

b. The Proposed Ordinance would prohibit retail establishments (excluding restaurants) in the Study Area, from distributing single-use carryout paper and plastic bags at no charge, and would create a mandatory 10 cent (\$0.10) charge for each recycled paper and reusable bag distributed by these stores at the point of sale. The Proposed Ordinance does not include any new physical development or construction activity. As such, the Proposed Ordinance would not involve the burning of any materials such as brush, trees or construction materials. Therefore, **no impact** would occur and further discussion of this issue in an EIR is not warranted.

c, e-f. The Proposed Ordinance would apply throughout the Study Area. However, the ordinance would not involve any physical development or construction activities. As such, the Proposed Ordinance would not create new noise levels, or be subject to new noise levels in excess of existing noise standards outlined in the County's Noise Ordinance. Furthermore, the Proposed Ordinance would not result in a substantial increase in permanent or temporary noise levels above existing conditions. The ordinance could incrementally alter travel patterns associated with transport of single-use and reusable bags; however, this incremental change would not create any audible change in the noise environment in any neighborhoods in the Study Area. Therefore, **impacts** related to noise levels would be **less than significant** and further analysis of these issues in the EIR is not warranted.

d. The Proposed Ordinance would prohibit retail establishments (excluding restaurants) in the Study Area, from distributing single-use carryout paper and plastic bags at no charge, and would create a mandatory 10 cent (\$0.10) charge for each recycled paper and reusable bag distributed by these stores at the point of sale. The intent of the Proposed Ordinance is to reduce the environmental impacts related to the use of single-use plastic bags, and to promote a shift toward the use of reusable bags by retail customers. Although hazardous materials may be used in the process to manufacture single-use plastic, single-use paper and reusable bags, any existing or potential manufacturing facilities that manufacture bags would be required to continue to adhere to the requirements of the California Health and Safety Code (Section 25531-25543.3), which establishes a program for the prevention of accidental releases of regulated substances. With adherence to Health and Safety Code Section 25531-25543.3, carryout bag manufacturing facilities would be required to prepare and update a Risk Management Plan (RMP) that is designed to increase the protection of public health, the environment, and facility employees by ensuring proper emergency response and mitigation procedures when handling regulated substances and also assists the local government agencies in their communication and coordination efforts to improve facility safety while handling chemicals and hazardous materials. In addition, the completed product for each type of bag addressed by the ordinance would not be a hazardous material. As such, the Proposed Ordinance would not involve the application, use or disposal of hazardous materials. Moreover, the Proposed Ordinance would not involve any type of construction or activities that would require the use of hazardous materials or that would result in the release of hazardous materials into the environment. Thus, there would be **no impact** and further analysis of this issue in an EIR is not warranted.

g. The Proposed Ordinance would prohibit retail establishments (excluding restaurants) in the Study Area, from distributing single-use carryout

paper and plastic bags at no charge, and would create a mandatory 10 cent (\$0.10) charge for each recycled paper and reusable bag distributed by these stores at the point of sale. The Proposed Ordinance would not involve any physical development or construction activities. As such, the ordinance would not create or contribute runoff water that would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff. In addition, the Proposed Ordinance would not substantially deplete groundwater supplies or significantly reduce groundwater recharge, as it would not involve any buildings or other physical development. However, the Proposed Ordinance would be expected to lead to an increase in the number of reusable bags consumed in San Mateo County. Washing reusable bags for sanitary purposes (either in a washing machine or rinsing and wiping) by customers may incrementally increase water use in the Study Area. The impact to water supply and any impacts associated with groundwater supplies as a result of the increase in water use associated with the Proposed Ordinance is ***potentially significant*** and will be analyzed in an EIR.

h. The Proposed Ordinance would prohibit retail establishments (excluding restaurants) in the Study Area, from distributing single-use carryout paper and plastic bags at no charge, and would create a mandatory 10 cent (\$0.10) charge for each recycled paper and reusable bag distributed by these stores at the point of sale. The Proposed Ordinance would not involve any new buildings or other physical development and, therefore, would not require installation of a septic tank/leachfield sewage disposal system or require hookup to an existing collection system. Thus, there would be ***no impact*** and further analysis of this issue in an EIR is not warranted.

	IMPACT					Source
	Yes					
	NO	Not Significant	Significant Unless Mitigated	Significant	Cumulative	
5. TRANSPORTATION						
Will (or could) this project:						
a. Affect access to commercial establishments, schools, parks, etc.?	X					A,I,I(1)
b. Cause noticeable increase in pedestrian traffic or a change in pedestrian patterns?		X				A,I,I(1)
c. Result in noticeable changes in vehicular traffic patterns or volumes (including bicycles)?		X				I,Bf,I(1)
d. Involve the use of off-road vehicles of any kind (such as trail bikes)?	X					I,I(1)

e. Result in or increase traffic hazards?	X					S,I(1)
f. Provide for alternative transportation amenities such as bike racks?	X					I,I(1)
g. Generate traffic which will adversely affect the traffic carrying capacity of any roadway?		X				S,Q (1,2,3,4),U

Further Discussion:

a. The Proposed Ordinance would prohibit retail establishments (excluding restaurants) in the Study Area, from distributing single-use carryout paper and plastic bags at no charge, and would create a mandatory 10 cent (\$0.10) charge for each recycled paper and reusable bag distributed by these stores at the point of sale. The intent of the Proposed Ordinance is to reduce the environmental impacts related to the use of single-use plastic bags, and to promote a shift toward the use of reusable bags by retail customers. The ordinance would not involve any physical development or construction activities that would affect access to commercial establishments, schools or parks. Thus, there would be **no impact** and further analysis of this issue in an EIR is not warranted.

b-c. The Proposed Ordinance would prohibit retail establishments (excluding restaurants) in the Study Area, from distributing single-use carryout paper and plastic bags at no charge, and would create a mandatory 10 cent (\$0.10) charge for each recycled paper and reusable bag distributed by these stores at the point of sale. The intent of the Proposed Ordinance is to reduce the environmental impacts related to the use of single-use plastic bags, and to promote a shift toward the use of reusable bags by retail customers. The ordinance would not involve any physical development or construction activities. As such, the Proposed Ordinance would not cause or result in noticeable changes in pedestrian patterns, vehicular traffic patterns or volumes, nor would the ordinance cause a noticeable increase in pedestrian traffic. Implementation of the Proposed Ordinance would not reduce, sever, or eliminate pedestrian or bicycle circulation or access, or preclude future planned and approved bicycle or pedestrian circulation. It is anticipated that any change in vehicular traffic patterns as a result of truck delivery trips would not be noticeable. Therefore, impacts would be **less than significant** and further analysis of these issues in an EIR is not warranted.

d. The intent of the Proposed Ordinance is to reduce the environmental impacts related to the use of single-use plastic bags, and to promote a shift toward the use of reusable bags by retail customers. The ordinance would not involve any physical development or construction activities that would involve the use of off-road vehicles such as trail bikes. Therefore, **no impact** would occur and further analysis of this issue in an EIR is not warranted.

e-f. The Proposed Ordinance would prohibit retail establishments (excluding restaurants) in the Study Area, from distributing single-use carryout paper and plastic bags at no charge, and would create a mandatory 10 cent (\$0.10) charge for each recycled paper and reusable bag distributed by these stores at the point of sale. The intent of the Proposed Ordinance is to reduce the environmental impacts related to the use of single-use plastic bags, and to promote a shift toward the use of reusable bags by retail customers. The ordinance would not include any design features that would result in or increase traffic hazards, nor would it provide for alternative transportation amenities such as bike racks. Therefore, **no impact** would occur and further analysis of these issues in an EIR is not warranted.

g. The Proposed Ordinance would prohibit retail establishments (excluding restaurants) in the Study Area, from distributing single-use carryout

paper and plastic bags at no charge, and would create a mandatory 10 cent (\$0.10) charge for each recycled paper and reusable bag distributed by these stores at the point of sale. The intent of the Proposed Ordinance is to reduce the environmental impacts related to the use of single-use plastic bags, and to promote a shift toward the use of reusable bags by retail customers. The ordinance would not involve any physical development or construction activities. However, the shift toward reusable bags could alter truck travel patterns associated with delivering bags from manufacturers to retailers.

Stores making available recycled paper and reusable carryout bags would be required to sell recycled paper carryout bags made from 100% recycled material with a 40% post-consumer recycled content and reusable carryout bags made from cloth or other machine washable fabric that is at least 2.25 mils (0.000225 inches) thick, to customers for approximately \$0.10 per bag (\$0.25 per bag starting on or after January 1, 2015). It is anticipated that this cost requirement will create a disincentive to customers to request single-use bags when shopping at regulated stores and is intended to promote a major shift toward the use of recycled or reusable bags by retail customers, while reducing the number of single-use plastic and paper bags within the Study Area. Based on a cost requirement of at least \$0.10 per bag, this analysis assumes that the total volume of single-use plastic bags currently used in the Study Area (approximately 552,931,362 single-use plastic bags per year) would be replaced by approximately 30% recycled paper bags and 65% reusable bags as a result of the proposed Single Use Bag Ban Ordinance. It is assumed that 5% of the existing total of single-use bags used in the Study Area would remain in use since the Proposed Ordinance does not apply to some retailers who distribute single-use bags (i.e. restaurants) and these retailers would continue to distribute single-use carryout bags after the Proposed Ordinance is implemented. Thus, for this analysis, it is assumed that approximately 27,646,568 single-use bags would be used in the Study Area after the implementation of the Proposed Ordinance. Although the volume of a single paper carryout bag (20.48 liters) is generally equal to approximately 150% of the volume of a plastic bag (14 liters¹), this analysis assumes that approximately 165,879,409 recycled paper bags would replace approximately 30% of the plastic bags currently used in the Study Area.

In order to estimate the number of recycled paper or reusable carryout bags that would replace 359,405,485 plastic bags (65% of the existing number of plastic bags used in the Study Area per year), it is assumed that a reusable carryout bag would be used by a customer once per week for one year (52 times). This is a conservative estimate as a reusable bag, as required by the Ordinance, must have the capability of being used 125 times (see Appendix D for complete Ordinance). Nevertheless, for this analysis, in order to replace the volume of groceries contained in the 359,405,485 single-use plastic bags that would be removed as a result of the Proposed Ordinance, an increase of approximately 6,911,642 reusable bags per year would be purchased by customers at retail stores. This analysis assumes that as a result of the proposed ordinance the existing total volume of groceries currently carried in approximately 552 million single-use plastic carryout bags would be carried within approximately 200 million single-use plastic, reusable and single-use paper bags.

A permanent increase in recyclable paper bag and reusable bag use might lead to an increase in the frequency of truck trips needed to deliver a greater number of these bags to stores in the Study Area. However, any increase in truck trips related to recycled paper and reusable bag delivery would be partially offset by the reduction in truck trips related to single-use plastic carryout bag delivery since under the Proposed Ordinance, single-use plastic carryout bags would be banned and therefore truck delivery would not be required. Nevertheless, as shown in Table 1, assuming a worst-case scenario that as a result of the Proposed Ordinance the volume of existing single-use plastic bags would be replaced by approximately 30% recycled paper bags and 65% reusable bags, with 5% of the total plastic bags remaining in use, the net increase

¹ *The Ordinances to Ban Plastic Carryout Bags in Los Angeles County Final Environmental Impact Report (SCH #2009111104). Adopted by the County of Los Angeles Board of Supervisors on November 16, 2010.*

in truck traffic resulting from the change in bag use would be less than two trucks trip per day.

Truck trips would be expected to primarily utilize major regional transportation facilities (such as the Bayshore Freeway (U.S. 101), Junipero Serra Freeway (Interstate 280), and Cabrillo Highway (State Route 1)) and major arterials in the Study Area (such as El Camino Real, Woodside Road and California State Route 92 Freeway). Delivery trucks may periodically travel on residential streets, but an increase of less than two truck trips per day in the entire region (in the Study Area) would not cause a significant traffic impact at any existing intersections or street segments in the Study Area. Therefore, impacts related to the existing traffic load and the carrying capacity of the street systems would be ***less than significant*** and further analysis in an EIR is not warranted.

Table 1
Estimated Truck Trips per Day
Following Implementation of the Proposed Single-use Bag Ban Ordinance

Bag Type	Number of Bags per Year	Number of Bags per Truck Load**	Truck Trips Per Year	Truck Trips per Day
Single-use Plastic	27,646,568*	2,080,000	13	0.036
Single-use Paper	165,879,409*	217,665	762	2.08
Reusable	6,911,642*	108,862	64	0.17
Total			839	2.3
Existing Truck Trips for Plastic Bags			(266)	(0.73)
Net New Truck Trips			573	1.57

**Based on worst case scenario estimate of 5% existing plastic bag use in the Study Area (approximately 552,931,362 plastic bags per year) to remain, 30% conversion of the volume of existing plastic bag use to recyclable paper bags and 65% conversion to reusable bags (based on 52 uses per year). Based on City of San Jose Final EIR, SCH # 2009102095, October 2010*

***City of Santa Monica Single-Use Carryout Bag Ordinance EIR (SCH #2010041004), January 2011; and City of Sunnyvale Carryout Bag Ordinance EIR (SCH#2011062032), December 2011.*

p. Result in creation of or exposure to a potential health hazard?		X				S,I(1),Q(1),R(State

Further Discussion:

a, e, h. The Proposed Ordinance would prohibit retail establishments (excluding restaurants) in the Study Area, from distributing single-use carryout paper and plastic bags at no charge, and would create a mandatory 10 cent (\$0.10) charge for each recycled paper and reusable bag distributed by these stores at the point of sale. The intent of the Proposed Ordinance is to reduce the environmental impacts related to the use of single-use plastic bags, and to promote a shift toward the use of reusable bags by retail customers. As such, the Proposed Ordinance would not result in the congregation of more than 50 people on a regular basis, nor would it encourage off-site development or increase development intensity. Furthermore, the Proposed Ordinance is an ordinance and would therefore not be located within 500 feet of an existing or planned public facility. Therefore, **no impact** would occur and further analysis of these issues in an EIR is not warranted.

b-d, l. The Proposed Ordinance would prohibit retail establishments (excluding restaurants) in the Study Area, from distributing single-use carryout paper and plastic bags at no charge, and would create a mandatory 10 cent (\$0.10) charge for each recycled paper and reusable bag distributed by these stores at the point of sale. The intent of the Proposed Ordinance is to reduce the environmental impacts related to the use of single-use plastic bags, and to promote a shift toward the use of reusable bags by retail customers. The ordinance would not involve any physical development or construction activities. In addition, the Proposed Ordinance would not involve any new development, land use or zoning changes within the Study Area. Therefore, **no impact** would occur and further analysis of these issues in an EIR is not warranted.

f-g, i. The Proposed Ordinance would prohibit retail establishments (excluding restaurants) in the Study Area, from distributing single-use carryout paper and plastic bags at no charge, and would create a mandatory 10 cent (\$0.10) charge for each recycled paper and reusable bag

distributed by these stores at the point of sale. The intent of the Proposed Ordinance is to reduce the environmental impacts related to the use of single-use plastic bags, and to promote a shift toward the use of reusable bags by retail customers. In addition, the ordinance would not result in an increase in population or employment; therefore, the ordinance would not generate any demands that would cause a public facility to reach or exceed its capacity, nor would it affect the capacity of any public facilities serving the Study Area. As previously stated, the ordinance would not create or contribute runoff water that would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff.

Nearly 90% of the water supplied to the Bayside and the northern portion of the Coastsides, of San Mateo County, is provided by the San Francisco Water Department (SFWD) through contractual agreements. Local surface water and groundwater sources are used to supplement San Francisco Water Department water. These local sources are especially important in Half Moon Bay, Daly City, South San Francisco, San Bruno and the southeastern portion of the County. Wastewater treatment for each sewered area in San Mateo County is provided by 11 treatment plants, two of which are located outside of the County. As stated above in (g) and (h) of Section 4. *Air Quality, Water Quality and Sonic*, the Proposed Ordinance may incrementally increase water demand and wastewater generation as a result of retail customers washing reusable bags for sanitary purposes (either in a washing machine or rinsing and wiping). In addition, Solid waste produced in San Mateo County is for the most part disposed of within the County area. The bulk of municipal wastes, both residential and commercial, is collected by six scavenger companies which have collection franchises within nineteen cities, three sanitary districts and the County (for East Palo Alto and for the South Coastsides area). The shift toward reusable bags would reduce the amount of single-use plastic bags sent to local landfills. However, the Proposed Ordinance may result in a temporary increase in the number of recycled paper bags and a permanent increase in the number of reusable bags that are currently used in the Study Area. As such, the Proposed Ordinance may incrementally increase the amount of solid waste generated related to these types of bags. Therefore, impacts related to wastewater conveyance and treatment, as well as water supply and solid waste generation would be ***potentially significant*** and will be analyzed in an EIR.

j. The Proposed Ordinance would prohibit retail establishments (excluding restaurants) in the Study Area, from distributing single-use carryout paper and plastic bags at no charge, and would create a mandatory 10 cent (\$0.10) charge for each recycled paper and reusable bag distributed by these stores at the point of sale. The ordinance would not involve any physical development or construction activities that would consume fossil fuels. However, the manufacturing of reusable or recycled bags may involve the use of small amounts of fossil fuels, which could incrementally increase the consumption of those resources. The increase in fossil fuel consumption, as a result of the Proposed Ordinance, would be incremental and would be offset to some degree by the reduction in the amount of single-use plastic bags manufactured (reduction from approximately 552 million single-use plastic carryout bags to approximately 200 million single-use plastic, reusable and single-use paper bags). Therefore, impacts would be ***less than significant*** and further analysis of this issue in an EIR is not warranted.

k. The Proposed Ordinance would require an amendment to the Municipal Code of San Mateo County and in each of the participating municipalities. However, the Proposed Ordinance would not involve any new development or construction activities. Therefore, the Proposed Ordinance would not require an amendment to or exception from adopted general plans, specific plans, or community policies or goals. Impacts would be ***less than significant*** and further analysis of this issue in an EIR is not warranted.

m, n. The Proposed Ordinance would prohibit retail establishments (excluding restaurants) in the Study Area, from distributing single-use carryout paper and plastic bags at no charge, and would create a mandatory 10 cent (\$0.10) charge for each recycled paper and reusable bag distributed by these stores at the point of sale. The intent of the Proposed Ordinance is to reduce the environmental impacts related to the use of single-use plastic bags, and to promote a shift toward the use of reusable bags by retail customers. The ordinance would not involve any

physical development or construction activities. As such, the ordinance would not require the relocation of people or businesses, nor would it alter the supply of low-income housing. Therefore, **no impact** would occur and further analysis of these issues in an EIR is not warranted.

o, p. The Proposed Ordinance would prohibit retail establishments (excluding restaurants) in the Study Area, from distributing single-use carryout paper and plastic bags at no charge, and would create a mandatory 10 cent (\$0.10) charge for each recycled paper and reusable bag distributed by these stores at the point of sale. The intent of the Proposed Ordinance is to reduce the environmental impacts related to the use of single-use plastic bags, and to promote a shift toward the use of reusable bags by retail customers. The ordinance would not involve any physical development or construction activities. However, the ordinance would result in less than two new truck trips per day in the region. Nevertheless, this change in traffic associated with the ordinance would not conflict with an adopted emergency response plan or emergency evacuation plan. Moreover, the ordinance would not result in the creation of or exposure to a potential health hazard. Impacts would be **less than significant** and further analysis of these issues in an EIR is not warranted.

	IMPACT					Source

Further Discussion:

a, b, e. The Proposed Ordinance would prohibit retail establishments (excluding restaurants) in the Study Area, from distributing single-use carryout paper and plastic bags at no charge, and would create a mandatory 10 cent (\$0.10) charge for each recycled paper and reusable bag distributed by these stores at the point of sale. The intent of the Proposed Ordinance is to reduce the environmental impacts related to the use of single-use plastic bags, and to promote a shift toward the use of reusable bags by retail customers. The ordinance would not involve any physical development or construction activities. As such, the Proposed Ordinance would not be adjacent to a designated Scenic Highway or within a State or County Scenic Corridor. In addition, the ordinance would not obstruct scenic views from existing residential areas, public lands, public water bodies or roads. Moreover, the ordinance would not visually intrude into an area having natural scenic qualities. In addition, as a result of the Proposed Ordinance, it is anticipated that litter associated with plastic bags would be reduced which would improve the visual character, natural scenic qualities and/or scenic views of areas within the Study Area compared to existing conditions. Therefore, there would be **no impact** related to these issues and further analysis in an EIR is not warranted.

d. The Proposed Ordinance would not involve any physical development or construction activities. In addition, the Proposed Ordinance would not involve any ground-disturbing activities such as excavation. As such, the ordinance would not involve construction of buildings or structures in excess of three stories or 36 feet in height, nor would it affect a historical or archaeological resource. Therefore, **no impact** would occur and further analysis of these issues in an EIR is not warranted.

IV. MITIGATION MEASURES

YES

NO

Mitigation measures have been proposed in project application.

_____X_____

Other mitigation measures are needed.

_____X_____

The following measures are included in the project plans or proposals pursuant to Section 15070(b)(1) of the State CEQA Guidelines:

None applicable.

V. MANDATORY FINDINGS OF SIGNIFICANCE

	Yes	No
1. Does the project have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal, or eliminate important examples of the major periods of California history or prehistory?	X	
2. Does the project have the potential to achieve short-term environmental goals to the disadvantage of long-term environmental goals?		X
3. Does the project have possible environmental effects which are individually limited, but cumulatively considerable?	X	
4. Would the project cause substantial adverse effects on human beings, either directly or indirectly?		X

On the basis of this initial evaluation:

_____ I find the proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared by the Current Planning Section.

_____ I find that although the proposed project could have a significant effect on the environment, there WILL NOT be a significant effect in this case because of the mitigation measures in the discussion have been included as part of the proposed project. A NEGATIVE DECLARATION will be prepared.

_____ X I find that the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.

Subject: Plastic bag ban

Show BCC
Rich Text

I do not support the plastic bag ban for many reasons both hardship, inconvenience and financial. I do not believe they are as much a litter problem as claimed. I and many others reuse the bags in many ways. we will be forced to buy bags off the shelf-are they biodegradeable? Using only your own bags is inconvenient and a hardship-taking paper adds to cost of groceries. MANY REUSABLE BAGS ARE NOT WASHABLE AND IT HAS BEEN PROVEN THEY HARBOR UNHEALTHY ERMS AND BACTERIA.

- Large families can use 6-10 bags at a time -to launder and bring in enough bags each time is unreasonable
- taking paper adds to the bill!
- Homeless people cannot clean and carry bags or afford paper
- can create longer lines at checkout while checkers deal with individual bags
- added bookwork for storeowners-where does the profit go?
- DON'T ban plastic bags! Keep the paper bags provided free as they are now. Don't saddle the people with another expensive inconvenience as we were saddled with an expensive new garbage contract. Think of the people who elected you! I would think you have more important issues to deal with than plastic bags!

Comments:

This is an issue I raised at Workshop #3 - April 25, 2012

On the City of Mountain View's web site, Garbage & Recycling Programs, Single Use Bag Ordinance, reason #3 states:

"Paper bags are not better for the environment than plastic bags. They both have environmental impacts, including depleting natural resources and causing pollution. The production of paper bags generates 70% more air and 50 times more water pollution than plastic bags."

In addition, due to paper's weight and distance to paper mills where it is manufactured, additional Greenhouse Gas Emissions are the result as plastic is much less in weight than paper.

This affects Air Quality, Water Quality, and Greenhouse Gas Emissions and should be addressed

SAN MATEO COUNTY
PLANNING AND BUILDING
DEPARTMENT

Planner Leung,

My April 25th copy of the Menlo
Park Almanac contained a long article
about banning plastic bags at check-
out counters.

I shop, each week, at the Safeway store in our small shopping center at 325 Sharon Park Drive. I buy the supplies I need, at 94 years of age, to be able to live alone and take care of myself.

I have a good driver who gets me to the store, and home again, after my shopping spree. Those

OVER

wonderful plastic bags, at Safeway, are a large part of what makes it possible!

And I use every single one of them and any that my neighbors can spare as well!

When I must put something down the garbage chute, in our condominium complex, I tie it carefully and tightly in one of those plastic bags. Nothing spills. It goes out in our next garbage collection.

The article in the Almanac refers to the paper bags that may be purchased over the counter in the future, for 10¢, then later for 25¢. To provide that paper, how many trees will disappear from our land??

If you have any questions regarding this letter to you, please don't hesitate to call me at 650/854-5425.

Sincerely,

Beatrice McCargar Groner

**SAN MATEO COUNTY
ENVIRONMENTAL HEALTH**

MAY 03 2012

RECEIVED

Dear Director Peterson:

International Paper (IP) appreciates this opportunity to submit comments about how an ordinance that bans plastic bags and imposes an excessive fee on paper bags would affect the public and businesses. First of all we applaud San Mateo County's efforts to move toward a higher environmental standard. However, we urge you to base your decision on the most thorough and accurate information. As you review the Environmental Impact Report we urge you to take into consideration what impact a fee on paper bags would have on jobs, the environment and consumers.

For your background, IP employs nearly 3,600 employees in 35 facilities throughout the state. At our Buena Park Kraft Paper Bag Plant we produce the majority of paper carryout bags you find at the grocery markets. IP is the only manufacturing facility in California that supplies the grocery industry with handle sacks and carry sacks. The paper bags produced at IP's Buena Park plant contain a minimum of 40% recycled content. Contrary to recent arguments, paper bags are reusable, highly recycled, and are fixtures in community recycling programs throughout California. Our workers are proud of the product they make and an excessive fee on paper bags will drive down demand and have an adverse impact on jobs.

The debate regarding plastic vs. paper has been playing out in several cities throughout the State and several inaccurate statements have been made which should not be used as the basis for moving toward a fee or a ban on paper bags. First there have been claims that the production of paper bags contributes to more greenhouse gases and takes more energy than producing a plastic bag. The reality is that the pulp and paper industry meets nearly two-thirds of its energy needs through renewable, carbon neutral biomass energy. With regard to water usage, nearly ninety-percent of the non-consumptive water used to make products, including paper, is returned to the environment in a cleaner condition than when it entered the mill. And unlike plastic bags, according to a report released in 2010 by the U.S. Environmental Protection Agency, consumers nationally recycle paper at a rate of 50 percent. Attached is a document that further outlines facts regarding paper production vs. plastic.

We further believe that if the County's final goal is to divert to plastic or cloth reusable bags, some unanswered questions remain such as 1) has a thorough evaluation been done of the environmental impact of manufacturing these reusable bags outside the State of California, and 2) what are the transportation and disposal implications of these bags once their life cycle is reached? We strongly believe that these questions and much more need to be answered before the County moves forward with any proposal to place a fee on paper bag.

Although there is currently no statewide definition of a "reusable bag," most local jurisdictions that have defined a reusable bag include specifications that our paper bags already meet such as:

1. Has a minimum lifetime of 125 uses, carrying a minimum of 22 pounds over a distance of 175 feet.
2. Has a minimum volume of 15 liters.
3. Has a handle for carrying.
4. Does not contain lead, cadmium, or any other heavy metal in toxic amounts.
5. Has printed on the bag; the name of the manufacturer, the country in which it was manufactured, a statement that the bag complies with state or local law and the percentage of postconsumer recycled material, if any.

For this and other reasons we strongly believe that instead of placing an excessive fee on paper bags we should continue to educate the consumer that paper bags are in fact reusable and should be used a minimum of 7-10 times, if the bag is not wet or torn, before it is recycled.

Considering there has been no substantive evidence provided to conclude that a fee on paper bags would be beneficial, we believe this proposal unfairly punishes a product with a successful track record and will hurt jobs. A fee that exceeds the cost paid by a Grocer, to recover its costs, is essentially a ban on the paper bags. A reduction in the demand for paper bags, which are an environmentally friendly alternative, will impact jobs in our Buena Park facility.

Our union workforce is proud to produce a product that is an integral part of the recycling success story here in California. We look forward to working in partnership with the County and believe we can be an invaluable resource to you and your staff as this debate progresses. If you have any questions or need additional information, please do not hesitate to call me at 916-346-4185. I look forward to discussing this with you soon.

Sincerely,

Cynthia Leon
Government Relations Manager

Paper Bags: The Natural Choice

The complimentary use of renewable trees and recycled fiber make paper bags one of the most sustainable products in the world. To learn more, read on.

Renewable

- Made from trees (paper) and corn (glue) which are both re-planted and re-grown.⁽¹⁾
- Using paper products helps to keep land forested that might otherwise be developed or used for other non-sustainable purposes.⁽²⁾
- Forestland is steadily increasing in the United States. There are more trees now than there were 100 years ago.⁽³⁾
- A typical acre of young, healthy trees will capture 5,880 pounds of carbon dioxide (a primary greenhouse gas) each year.⁽⁴⁾
- Trees provide the raw material and more than 65% of the energy needed to create paper.⁽⁵⁾
- Using certified paper bags is your assurance that you are contributing to sustainability, protecting wildlife habitat, and protecting endangered forests. Look for certification from a third party source, such as SFI or FSC.⁽⁶⁾

Compostable

- If a paper bag does end up as litter on land, in a stream, or in the ocean, that bag will decompose and pose no threat to wildlife and the environment.⁽⁷⁾
- Paper bags are ideal as a container to hold compostable waste.⁽⁸⁾
- Composting household waste is the vision for the future – with the potential to eliminate two-thirds of residential waste going to landfills.⁽⁹⁾

Recyclable

- Recycling is an important part of fostering a sustainable planet.⁽¹⁰⁾
- Over half of all paper in the United States is recovered for recycling.⁽¹¹⁾
- The balance of renewable fiber from trees and recovered fiber is a global equation. Some continents must rely more upon recycled fiber and some must provide the renewable virgin fiber to keep the cycle going.⁽¹²⁾
- Using only 100% recycled paper is not a sustainable practice. If people only used 100% recycled paper, the world would run out of fiber in under two months.⁽¹³⁾

Reusable

- Paper bags are reusable for future visits to your grocery store.
- Paper bags have many other uses outside of the grocery store including:
 - Recycling and composting containers – that way the container is recyclable and compostable
 - School book covers, gift wrap, and other craft projects
 - Picnics/Sporting events
- When a paper bag becomes soiled or worn out, it is ready for recycling or composting, continuing the cycle of sustainability.

- 1) Every day the paper and forest products industry plants more than three times the number of trees than are harvested – paper is truly renewable and sustainable.
www.afandpa.org/AmericanWoodCouncil.aspx
 Plastic bags rely upon the use of an unsustainable, finite resource.
- 2) Have you ever heard someone suggest that by using less paper you can “save a tree”? The fact is that if the demand for paper declines, tree farming also declines. Decreasing paper use may well cause a forest to be cleared for other purposes.
 Privately-owned forests supply 91% of the wood harvested in the US. www.afandpa.org/forestry.aspx?id=543
- 3) The State of America’s Forests. Society of American Foresters, 2006.
- 4) www.treelink.org/docs/29_reasons.phtml
- 5) On average, paper and wood products mills generate 65% of their energy needs from renewable biomass (this is wood and wood by-products that are part of the manufacturing process). Unlike coal, oil, or natural gas, trees and the wood that they supply grow back.
www.afandpa.org/RenewableEnergy.aspx, see Fact Sheet: Renewable Energy
 Renewing your resources is just as important as reusing your products. Paper lets you do both.
 Down To Earth, International Paper

Comments:

- My concerns are:
- ① that the cities are engineering a back door tax by forcing businesses to charge for paper bags.
 - ② that they are doing this without a vote of the people.
 - ③ that they are misleading people by calling them "single use" bags. (I have personally made a list of 101 uses.
 - ④ That the cities are engaging in what would be called price-fixing and collusion were businesses to do the exact same thing.
 - ⑤ That the cities believe they can set a price for any product or service provided by private businesses or citizens
 - ⑥ That this is a deliberate attempt by the cities to bypass prop 218 and Prop 26.
 - ⑦ That the EIR is just window dressing for a decision that is already made.
 - ⑧ that the EIR does not consider the current impact of plastic bags in the bay area. If it is negligible the project should be dropped.

County seeks public comment on plastic-bag ban at checkout

By Dave Boyce
Almanac Staff Writer

With the support of Menlo Park, Portola Valley, Woodside and most other city and town governments in San Mateo County, the county's Department of Environmental Health Services is asking the public to comment on the scope of a proposed county-wide ordinance that would ban the use by retailers of single-use plastic bags at checkout counters.

Paper bags would still be available at the counters, but customers would have to buy them—paying a minimum of 10 cents until Dec. 31, 2014, and 25 cents after that.

The point would be to encourage people to shop with their own reusable bags, Dean Peterson, the director of Environmental Health Services for San Mateo County, told the Portola Valley Town Council recently.

An environmental impact report (EIR) is in the works. A staff report online describes the proposed ordinance and includes ways to comment, either by writing or by attending one of six public meetings, including one at 6 p.m. on Thursday, May 3, in the Redwood City Public Library at 1044 Middlefield Road.

Submit written comments before May 6 to Planner Camille M. Leung in the Planning and Building Department at 455 County Center, Second Floor, in Redwood City, CA 94063. By email, contact Ms. Leung at cleung@smcgov.org.

Public comments will "help cities and local jurisdictions decide whether to ban paper and plastic bags," the report says.

Redwood City joins Portola Valley, Woodside and Menlo Park among the 18 city and town governments in San Mateo County listed as supporting this proposal. Atherton is not on the list, but then Atherton has no retail outlets. The list also includes six cities and towns in Santa Clara County.

A group effort is important in that ordinances in individual communities have been vulnerable to court challenges by deep-pocketed bag manufacturers. With an EIR, paid for by the county, his ordinance would be harder to challenge, Mr. Peterson told the Woodside Town Council in March.

Restaurants and other food service outlets would be exempt, and the ban would not affect the plastic bags used for raw or bulk foods, medicines and bags meant to prevent cross-contamination inside a shopping bag. Retailers would have to keep detailed records on bag-related costs and

Photo by Michelle Lee/The Almanac

Rumors of a ban on plastic bags at retail checkout counters are true. The county's Department of Environmental Health Services is rallying support for a county-wide environmental ordinance that would also levy a 10-cent fee for a paper bag, thereby encouraging customers to bring their own reusable bags.

revenues related to complying with this ordinance.

Meeting schedule

Here is the schedule of public meetings:

■ Half Moon Bay: Wednesday, April 18, at 6 p.m. in the Ted Adcock Community/Senior Cen-

ter Sun Room at 535 Kelly Avenue.

■ San Mateo: Thursday, April 19, at 5:30 p.m. in the Oak Room at San Mateo Public Library at 55 West Third Ave.

■ Mountain View: Wednesday,

Comments:

Waterproof plastic bags are necessary in the rainy season for me and other people who do not own rain gear. Even if we owned such, we have no place to put it when it's not raining. We have to carry our necessities with us day and night, so when it's raining, with or without wind, our stuff needs to be kept dry. That's why PLASTIC is necessary — also it's re-usable, not heavy, strong when doubled. And no paper bag can do the same.

Re: Proposed Single-Use Plastic Bag Ban at Retail Checkout Counters and 10-cent Paper Bag Fee

Dear Ms. Leung:

The stated purpose of the proposed plastic bag ban and 10-cent fee at checkout counters is to encourage shoppers to bring and use their own bags. Evidently the county government believes that plastic bags are undesirable and paper bags only slightly less so. As is frequently the case when the government attempts to make a behavior illegal or discourage it via a tax or mandated price, there will be unforeseen and unintended consequences.

Here are some of the unintended consequences I can imagine:

- An increase in the purchase and use of plastic trash bags such as Glad Bags, (we have to get our debris to the garbage and recycling bins somehow)
- More money spent to support the plastic industry (see above)
- A decrease in recycling as it becomes more costly and inconvenient to do so
- Costs to retail establishments to maintain the "detailed records on bag-related costs and revenues" to comply with the ordinance, which would be passed on to consumers via higher prices
- Increased cost of government to monitor and evaluate the program, which would be passed on to taxpayers

Let's keep the government out of the retail business. If reducing the use of plastic and paper packaging associated with retail establishments is a legitimate government goal (which I question!), I suggest it be done by encouraging consumers to reduce the purchase of boxed food, such as cereals, cookies, frozen food and other goods generally found in the center of grocery stores.

Very truly yours,

Sue O'Donnell

Subject: EIR comments

Hi,

It might be too late to submit EIR comments, but I thought I'd do it anyway...

I attended the May 3rd talk about the EIR at the Redwood City library, and found it very informative. I wanted to reiterate what someone said that night. If any research/data is available from other communities (think Santa Monica was mentioned for this one) regarding changing habits/behavior over time, that it might be helpful in the EIR. I'm thinking that after many people get used to bringing their own reusable bags to the store (rather than purchasing paper ones), that there would be a lessening of the environmental impacts of them buying paper ones (and associated distribution effects). I am a Redwood City resident, and if you want further info from me – just let me know via email.

Thanks, Lanah

Subject: EIR Scoping Cross-Contamination
Attachments: EIR scoping cross-contamination 5-4-12.pdf

Attached is my comment sheet documenting an issue I raised at Workshop #3 - April 25, 2012
The proposed ban of single use bags presents a potential health danger by cross-contamination of harmful organisms that may, through repeated usage, be present in reusable bags. These harmful organisms may infect the users of the bags, sales clerks who place purchases in these bags, infants and children playing with the bags and pets coming in contact with the bags. A study should be conducted by The County of San Mateo Health System to determine the type and level of harmful organisms, if any, present in the reusable bags currently in use. This should be addressed in the EIR for Single Use Bag Ban Ordinance.

Think before you print.>>> "Dorothy Kennedy" <dottynhugh@aol.com> 4/24/2012 7:32 PM >>> Usually I'm strongly for any environmentally sound idea, but I have personal reservations about banning the "one use only" plastic bag at the grocery store. They are not "one use" for me. I always use these plastic bags to line my garbage container at home and then to dispose of this garbage when it's filled. If I can't get the bags free with shopping, I will have to buy them. Either way, plastic is still a good way to wrap our garbage when it can't go through a garbage disposal system. Of course I object strenuously to anyone just throwing a plastic bag away after one use. As for paper bags, I have a goodly supply which I will use over and over and over again.

All this reminds me so much of my move to England in 1963. I bought lots of food to start housekeeping. I unloaded it all on the checkout counter. The attendant tallied the costs, waited to be paid and there stood all the things I'd bought and absolutely no way to bag them. They were still in wartime mode and hadn't got round to supplying containers. It was a learning experience. I also learned that one took the empty vinegar bottle back to the store to be refilled with "loose vinegar".

Think before you print.>>> "nancy barnby" <nbarnby@comcast.net> 4/26/2012 9:52 AM >>> Comment for Planner
Camille M. Leung:

I've used cloth bags on groceries and other goods ever since I spent 1982 in Switzerland where such bags were not free. I've read all the arguments for NOT banning bags, and I will address a few of those:

Re-used bags are full of bacteria.

I wash my bags occasionally. Bacteria is, in fact, everywhere and bacteria in grocery bags is seldom harmful. (I read the previous fact in a newspaper interview with a Berkeley professor about same.)

People might forget and leave bags in their cars.

The learning curve on this is short. I never forget my bags. I even carry my own bags into Bloomingdale's or Marshall's.

Bagging in cloth takes longer and is difficult for grocery checkers.

I help bag. I realize that not everyone will do this, but I think that stores could encourage this trend.

Eg., "For faster checkout, please help our cashiers bag your groceries." One grocery -- Foods Co. -- in Redwood City does not

bag for people at all, whether they use the free plastic or their own bags.

People use the bags for other things such as dog poop or as liners in garbage cans.

One can buy bags for garbage or dog poop. And our newspapers come in plastic, so we already have too many bags.

A newspaper article recently showed how people can fold newspapers to use for liners.

The cost for bags will be hard on the less fortunate people.

They, too, can obtain cloth bags and save buying paper or plastic. I bought my cloth bags cheaply at Saver's in Redwood City.

Many stores now sell reusable bags for reasonable prices.

That's all I can think of for now -- except the BEST reason: We already put too much stuff into landfill!

April 25

Dear Ms Leung,

I may be looking in the wrong places, but nowhere have I seen any comments about the big difficulty in banning one-time (supermarket) plastic bags:-

What do we use to dispose of kitchen waste and other wet garbage?

Our garbage collectors' work is unpleasant enough already, and they would not be happy to deal with unwrapped kitchen waste up to a week old. Also, dumpsters and other refuse containers would soon get dirty with even-older garbage, to the point of being a health hazard.

Homeowners and apartment maintenance staff would not appreciate having to wash their trash cans weekly.

Paper bags are useless for wet garbage (and may be banned anyway).

Newspapers, too, have little wet strength (and ought to be recycled).

Unless somebody has a bright idea, or the garbage-collection companies can somehow change their technique, I think we are in for trouble.

Best wishes!

Peter Bradshaw

Subject: plastic bag ban EIR scope comment

this planned ban, while well intentioned, as a variety of unintended consequences. These consequences must be studied in the EIR.

1. reusable bags have health issues, as described below in a norovirus outbreak traced back to a dirty reusable bag.

Consumers apparently are not aware of the health issues associated with reusable bags. These bags are infrequently washed or otherwise maintained. The bags may be stored, like one use plastic bags, in areas that promote pathogen growth. Most shoppers place plastic and reusable grocery bags in car foot wells and trunks without any thought. Grocery bags are taken camping or hiking (or to school) and exposed to all sorts of environments. Banning one use bags will exacerbate these disease exposures.

A sole focus on reusable bags will also expose grocery workers to dirty bags.

2. In pacifica, plastic bags are routinely used to pick up dog waste in public areas; on beaches; on sidewalks. Loss of plastic bags will increase abandoned dog waste. I seriously doubt dog owners will buy other types of dog waste pick-up bags. The City of Pacifica, like all other towns, faces huge budget constraints and will not be able to provide dog waste bags in public areas. The few dog waste bag stations in Pacifica are regularly empty. The net result will be abandoned dog waste.

3. as a matter of public policy, educating the public to recycle has a more lasted effect than various bans. The history of recycling, while banning very selective materials, has always focused on ingraining a recycle ethic into public awareness. Since this alleged problem is of state-wide import, the State of Calif. should institute a program where one use plastic bags can be recycled where bottles and cans are recycled and/or picked up by garbage companies like used batteries--segregated and placed on top of garbage cans for pick-up.

4. this ban is ill-conceived and should be abandoned in favor of a more thorough recycle effort.

Reusable grocery bag carried nasty norovirus, scientists say

A reusable grocery bag was traced to an outbreak of norovirus that sickened members of a girls' soccer team in Oregon.

By JoNel Aleccia

Oregon public health officials have traced a nasty outbreak of norovirus infections in a group of soccer players to an unlikely source: a reusable grocery bag contaminated with what some experts are calling "the perfect pathogens."

The incident is raising questions, once again, about the cleanliness of the portable shopping bags that many consumers use to avoid the paper vs. plastic impact on the environment.

"We wash our clothes when they're dirty; we should wash our bags, too," said Kimberly K. Repp, an epidemiologist with the Washington County Department of Health and Human Services in Hillsboro, Ore. Her work is published this week in the Journal of Infectious Diseases.

Repp was an intern with the Oregon Health and Science University in October 2010 when she and other experts were asked to help unravel the mystery of sick soccer players and their chaperones. They had traveled north from Beaverton and Tigard, Ore., to Washington state on a

Less than 48 hours later, nine people were ill with unpleasant symptoms including vomiting and diarrhea. The question was: How did they get it?

One of the soccer players -- all 13- and 14-year-old girls -- had fallen ill on Saturday night and moved into the room of one of the parent chaperones. The pair went home early Sunday, with no further contact with other players.

Even so, seven other people became ill within days, stumping scientists momentarily.

Noroviruses are a group of viruses responsible for some 21 million cases of gastrointestinal illness a year, including 70,000 hospitalizations and 800 deaths.

"It involved really thinking outside the bag, so to speak," Repp said.

Eventually, interviews revealed that most of those who became ill ate packaged cookies at a Sunday lunch. Where did the cookies come from? Turns out, the culprit was a reusable grocery bag of snacks left in the empty hotel room occupied by the first girl who got sick.

Quickly, the puzzle fell into place. The girl had been very ill in the hotel bathroom, spreading an aerosol of norovirus that landed everywhere, including on the reusable grocery bag hanging in the room.

When scientists checked the bag, it tested positive for the bug, even two weeks later.

"It was a knock out of the park," said Repp. "We demonstrated norovirus transmission without person-to-person contact. That's why this is different."

The trouble with noroviruses -- which cause an estimated 21 million cases of gastroenteritis a year, some 70,000 hospitalizations and 800 deaths -- is that they're tough bugs that can live for prolonged periods on objects and surfaces, said Dr. William Schaffner, chairman of the department of preventive medicine at Vanderbilt University Medical Center in Nashville.

"Norovirus does have the vexing capacity to persist in the environment," he said.

While the risk of contracting an illness from any particular reusable bag is low, Schaffner said, the Oregon study follows a 2010 paper by researchers at the University of Arizona and Loma Linda University that found large numbers of bacteria in reusable grocery bags, including 12 percent that were contaminated with E. coli.

When scientists stored the bags in the trunks of cars for two hours, the number of bacteria jumped 10-fold.

Some critics [dismissed that study](#), which was funded in part by the American Chemistry Council, which supports the makers of some disposable plastic bags.

But few have debated the study's conclusion, which found that washing the reusable shopping bags regularly decreased contamination by 99.9 percent.

"You could just wipe it down with Lysol or Clorox," said Repp.

Schaffner agrees. The most important tool to prevent norovirus, which spreads rapidly and infects quickly, is good hygiene, including careful hand-washing and thorough cleaning of the contaminated environment.

"You could wash the bag," Schaffner said. "Or you could start over with a new bag."

Think before you print.>>> "lesli lee" <lesliannel@yahoo.com> 5/1/2012 11:56 AM >>> We whole-heartedly support the plastic bag ban (or charging \$ for it) as soon as possible. "Green is passing on paper or plastic". It's a great way to incentivize people to get resourceful and less wasteful. If people composted food waste (in their own backyards or with county garbage programs) there would be little to no need for plastic bags used for weekly garbage pickup. I've been using this method for over a decade and have saved a lot of \$money on garbage bills (let alone methane gas production from rotting food in the landfills). Composting is easy, fun and with earthworms is a great way to feed plants "black gold" with almost no additional costs.

Be well blessings,

Lesli,

resident of Los Altos

Think before you print.>>> "Steve Taffee" <sjtaffee@yahoo.com> 4/18/2012 3:53 PM >>> I support a county-wide ban on the use of plastic bags. The negative effect of plastics bags on the environment are documented beyond dispute, and effective alternatives exist. I am aware that the ban may be inconvenient for some retailers and consumers, but this negative is far outweighed by the positive benefits to all of us.

The county's plan calls for a cost to be levied on the use of plastic bags as a means of discouraging their use. While such economic forces may be useful in curtailing undesirable behavior, it sends the wrong message.

Plastic bags are not a matter to be something available to consumers who are not price-sensitive. Instead, they should be removed from the shelves of retailers altogether. So I support a ban, period. Your plan seems penalizes poor citizens who can't afford to pay for the "convenience" of an item that is bad for the environment. This is not a matter of convenience.

It's a matter of what is right for our urban ecology.

Dear Ms. Leung,

I am a long-established county resident -- I have owned my home in Menlo Park for over 40 years. I strongly favor a comprehensive county-wide ordinance controlling, and to the greatest extent possible forbidding, single-use plastic bags. These bags have large and long-lived environmental costs, and from my experience of living in Europe, I know first-hand that the use of reusable cloth or string-net bags is totally compatible with our urban lifestyle.

Sincerely,

L Peter Deutsch

Think before you print.>>> "David Smernoff" <davids@acterra.org> 4/18/2012 1:00 PM >>> Dear Ms. Leung -

I strongly support the plastic bag ban being considered by San Mateo County. Single use plastic bags have no place in our future. They can be easily replaced by paper bags, or even better, by reusable cloth bags. I currently use paper (many times then recycle it) and cloth bags for large items. I also use small cloth bags for fruit and vegetables that are washable and make an excellent alternative to paper. Perhaps part of the EIR analysis should be on re-useable bags vs. paper from an environmental sustainability standpoint as well as economics (at 10 to 25 cents per paper bag, one could own and reuse cloth bags for much less cost). For example see: http://www.ecobags.com/Our_Products/Produce_Bags (I have no affiliation with ecobags except as a satisfied customer).

Sincerely,

David Smernoff

Think before you print.>>> "Christina Lee" <christinajadelee@gmail.com> 4/18/2012 2:14 PM >>> Dear Camile M. Leung, I'm in support of the plastic bag ban. This is an important step in the right direction. Just take a look at the Great Pacific Garbage Patch and its clear that this is a no-brainer. Yes, this may be slightly less convenient, and a little more expensive (25 cents) until we all get in the habit of bringing our own bags, but lets not be short sighted. Everyone was worried when SF banned plastic bags. I was living there at the time and it went off without a hitch.

Please let me know if there is anything else I can do to support this ordinance. I'd be happy to do whatever is necessary.

Christina Lee
Redwood City Resident

A couple more comments posted on The Almanac:

Posted by Margo McAuliffe, a resident of the Menlo Park: Linfield Oaks neighborhood, 1 hour ago

I support this fully and have used cloth bags for over 20 years. I launder them about once a year, whether they need it or not! I am not aware of having contracted any disease from this, as most items from a store are already in too much plastic. This is only step one.

Paper bags are not environmentally friendly, even if they are made from wood waste. It takes a great deal of water to make paper. I'm always amazed at people who shop several times a week, each time expecting a new, free bag. They use it for what, an hour or so, then throw it away (possibly recycling it). Sometimes I'm told "I use it for my old newspapers" and I wonder why. It's easy to put my old newspapers in the recycling without a paper bag.

It's important for us to be serious about reducing our use-once-and-throw-away life style. You have to train yourself to put the bags back in the car, but surely you can do that! And while you are at it, take your cloth bags to the pharmacy and other shops. If you buy 1 or 2 items, just carry them out. "I don't need a bag" should be everyone's response.

Margo McAuliffe

Posted by Steve, a resident of the Menlo Park: Central Menlo Park neighborhood, 1 hour ago

Ban the plastic bags ASAP. I've been using recycled paper bags from Trader Joe's for years - they're strong and have handles that make carrying them a dream. Unless they get wet or torn, they last for months and when they do wear out they just go into the recycle bin.

Subject: Plastic bag ban

I do not support the plastic bag ban for many reasons both hardship, inconvenience and financial. I do not believe they are as much a litter problem as claimed. I and many others reuse the bags in many ways. we will be forced to buy bags off the shelf-are they biodegradable? Using only your own bags is inconvenient and a hardship-taking paper adds to cost of groceries. MANY REUSABLE BAGS ARE NOT WASHABLE AND IT HAS BEEN PROVEN THEY HARBOR UNHEALTHY ERMS AND BACTERIA.

- Large families can use 6-10 bags at a time -to launder and bring in enough bags each time is unreasonable -taking paper adds to the bill!
- Homeless people cannot clean and carry bags or afford paper -can create longer lines at checkout while checkers deal with individual bags -added bookwork for storeowners-where does the profit go?
- DON'T ban plastic bags! Keep the paper bags provided free as they are now.

Don't saddle the people with another expensive inconvenience as we were saddled with an expensive new garbage contract. Think of the people who elected you!
I would think you have more important issues to deal with than plastic bags!

Subject: Plastic bag ban - just a start

Dear Camille,

I'm grateful to see the single use plastic ban being so strongly considered. However the single use plastic shopping bag is a problem basically because we have embraced the convenience without completing the cycle that would give us the opportunity to dispose of them properly. Our shopping habits depend on plastic film packaging to a very high degree, such that it is almost impossible to buy food without it. Banning just the single use carrier bag is a valuable start because we can all provide reusable shopping carrier bags.

ABOVE ALL WE NEED A MEANS OF DISPOSING OF PLASTIC FILM OF EVERY KIND, even when it is contaminated by food products or by bonding with other packaging materials. I can envisage a recycling of the cleanest plastic film, and the clean incineration of the rest as a fuel source. Good chemists and those who have figured how to produce the plastics in the first place must be given the problem as one in urgent need of solution. People are completely capable of collecting their plastic film material, with guidance. If we cannot handle this task then we must instead solve the problem by inventing another way to obtain our food, than from shops that provide it in neat clean plastic packages.

I am horrified to realize that we cannot rid ourselves of all plastic waste either by recycling it or by incinerating it as fuel. If it is too toxic to incinerate then it should not be presented to us as a useful material in the first place. That pool of plastic in the Pacific is a disaster affecting us all as it enters the food chain.

Thank you for listening,
Monica Spiller

Subject: Plastic Bag Ban EIR scoping comment

Camille:

As I understand from the press releases, the County is accepting comments regarding scoping for the Draft EIR of the plastic bag ban. Below are my comments regarding the general nature of the proposed plastic bag ban, followed by comments regarding scoping of the EIR:

General comments:

- While the plastic bags are generally referred to as "single use", I rarely use these bags one time. They are usually used the initial time bringing goods home, then they are used for moving things around the house and/or for bagging refuse to go to the landfill (as opposed to paper bags which I use for compost and for recycling bagging).
- There is mention that the bags are described as 2.25 millimeters thick. How will this be regulated/enforced? If it is successfully enforced, won't free market dictate the production and distribution of 2.30 millimeter thick "single use" bags? How does this meet the intent?
- There will be other unintended consequences that may negate the intent of this ban... for instance, since it is easiest and cleanest for me to bag my landfill refuse in plastic, if plastic bags are not "free" from stores, I will be buying plastic bags. How does this meet the intent of the ban? It seems like it is less efficient with our resources.

EIR Scoping:

- Please consider alternatives other than "banning the bag" to reduce pollution. I'm assuming that is the main goal, particularly as it relates to storm water runoff trash collection requirements? Alternatives may include central trash collection prior to discharge to waters of the US.
- Please include discussion of how each alternative quantitatively meets the mandated regulations, and include the impact of unintended consequences (similar to the one I mentioned above).

Thanks for your consideration,
Jason Mansfield
(resident of San Carlos)

Subject: SMC single use bag ban ordinance EIR

Camille,

I'm happy to hear that San Mateo County is working towards a single-use bag ban ordinance. As a resident of unincorporated Redwood City (North Fair Oaks), I especially appreciate county actions to keep our environment healthy and pleasant to look at.

While plastic has many good uses, single-use disposable bags and packaging are an invitation to litter, and hazardous to the environment. Plastic food containers and cutlery, wrappers, etc are often left in shopping bags and take out bags too, multiplying the negative effect.

I'd like to point out 2 specific environmental hazards of plastic bags, which are a hazard regardless of how environmentally harmful the actual plastic material is:

- 1) Plastic bags caught in trees or shrubbery can collect and hold rainwater, which provides a breeding ground for mosquitoes. With changes in climate leading to warmer weather and more intense rainfall, there is a growing likelihood of mosquito proliferation, and increased risk of deadly diseases such as West Nile Virus. Natural controls on mosquito populations (birds and bats) are under pressure from environmental stresses. Artificial controls, such as spraying pesticides on areas likely to harbor mosquitoes, can never get reach all the little pools of water, and the pesticides themselves have negative side effects.
- 2) Small bits of plastic in rivers and oceans have been shown to attract and collect very high concentrations of hydrophobic hazardous chemicals such as PCBs, DDE, & various pesticides.* Microplastics are ingested by small marine organisms and then passed up the food chain, accumulating even higher concentrations in the tissues of fish, birds and marine mammals. This is in ADDITION to the chemicals in the plastics themselves, which are ingested by small and large animals alike.

I am a records librarian, and have been working for the last 12 yeras as a contractor for the Environmental Protection Agency Region 9 Superfund Records Center (Superfund hazardous waste cleanup program). I have learned that PCBs, DDE and other pesticides are among the hazardous chemical which need to be kept out of water and soil to protect human health. Governments and corporations are spending millions of dollars to remove these chemicals, with great difficulty, from groundwater, surface water, the ocean, and the soil.

I applaud the County for making efforts that will reduce the vectors for putting these carcinogens into water and food supplies for humans and animals.

Utilities Calculations

County of San Mateo Single Use Bag Ban Ordinance- Unincorporated San Mateo County and all participating municipalities	
Plastic Bag Size (liters)	14
Paper Bag Size (liters)	20.48
Reusable bag size (liters)	37
Number of plastic bags used in participating jurisdictions per year	552,931,362
Number of plastic bags used in participating jurisdictions per day	1,514,880
Ordinance - Assume 95% switch to paper/reusable	
Number of Plastic bags still in (5% of existing)	75,744
Number of paper bags per day with 30% conversion	454,464
Number of reusable bags per day with 65% conversion	984,672

Conversions	
liters to gallons	0.26417205
Kg to short tons	0.00110231
MJ to kWh	0.27777778

Water Use - Ecobilan		Existing Plastic bag	Proposed Plastic Bag Use (5%)	Paper bag	Reusable bag used 52 times
Liters water per 9000 liters groceries		52.6	52.6	173	2.634615

Appendix D

Proposed Draft Ordinance

Single Use Bag Ban – Draft Ordinance Language

March 05, 2012

Definitions

- A. "Customer" means any person obtaining goods from a retail establishment.
- B. "**Nonprofit charitable reuser**" means a charitable organization, as defined in Section 501(c)(3) of the Internal Revenue Code of 1986, or a distinct operating unit or division of the charitable organization, that reuses and recycles donated goods or materials and receives more than fifty percent of its revenues from the handling and sale of those donated goods or materials.
- C. "Person" means any natural person, firm, corporation, partnership, or other organization or group however organized.
- D. "Prepared food" means foods or beverages which are prepared on the premises by cooking, chopping, slicing, mixing, freezing, or squeezing, and which require no further preparation to be consumed. "Prepared food" does not include any raw, uncooked meat product or fruits or vegetables which are chopped, squeezed, or mixed.
- E. "**Recycled paper bag**" means a paper bag provided at the check stand, cash register, point of sale, or other point of departure for the purpose of transporting food or merchandise out of the establishment that contains no old growth fiber and a minimum of forty percent post-consumer recycled content; is one hundred percent recyclable; and has printed in a highly visible manner on the outside of the bag the words "Reusable" and "Recyclable," the name and location of the manufacturer, and the percentage of post-consumer recycled content.
- F. "**Public eating establishment**" means a restaurant, take-out food establishment, or any other business that receives ninety percent or more of its revenue from the sale of prepared food to be eaten on or off its premises.
- G. "**Retail establishment**" means any commercial establishment that sells perishable or nonperishable goods including, but not limited to, clothing, food, and personal items directly to the customer; and is located within or doing business within the geographical limits of the County of San Mateo. "Retail establishment" does not include public eating establishments or nonprofit charitable reusers.
- H. "**Reusable bag**" means either a bag made of cloth or other machine washable fabric that has handles, or a durable plastic bag with handles that is at least 2.25 mil thick and is specifically designed and manufactured for multiple reuse.
- I. "**Single-use carry-out bag**" means a bag other than a reusable bag provided at the check stand, cash register, point of sale or other point of departure, including departments within a store, for the purpose of transporting food or merchandise out of the establishment. "Single-use

carry-out bags” do not include bags without handles provided to the customer: (1) to transport prepared food, produce, bulk food or meat from a department within a store to the point of sale; (2) to hold prescription medication dispensed from a pharmacy; or (3) to segregate food or merchandise that could damage or contaminate other food or merchandise when placed together in a reusable bag or recycled paper bag

.Single-use carry-out bag.

A. No retail establishment shall provide a single-use carry-out bag to a customer, at the check stand, cash register, point of sale or other point of departure for the purpose of transporting food or merchandise out of the establishment except as provided in this section.

B. **On or before December 31, 2014** a retail establishment may make available for sale to a customer a recycled paper bag or a reusable bag for a minimum charge of ten cents.

C. **On or after January 1, 2015** a retail establishment may make available for sale to a customer a recycled paper bag or a reusable bag for a minimum charge of twenty-five cents.

D. Notwithstanding this section, no retail establishment may make available for sale a recycled paper bag or a reusable bag unless the amount of the sale of such bag is separately itemized on the sale receipt.

E. A retail establishment may provide a customer participating in the California Special Supplement Food Program for Women, Infants, and Children pursuant to Article 2 (commencing with Section 123275) of Chapter 1 of Part 2 of Division 106 of the Health and Safety Code; and a customer participating in the Supplemental Food Program pursuant to Chapter 10 (commencing with Section 15500) of Part 3 of Division 9 of the California Welfare and Institutions Code, with one or more recycled paper bags at no cost through December 31, 2014.

Recordkeeping and Inspection.

Every retail establishment shall keep complete and accurate record or documents of the purchase and sale of any recycled paper bag or reusable bag by the retail establishment, for a minimum period of three years from the date of purchase and sale, which record shall be available for inspection at no cost to the county during regular business hours by any county employee authorized to enforce this part. Unless an alternative location or method of review is mutually agreed upon, the records or documents shall be available at the retail establishment address. The provision of false information including incomplete records or documents to the county shall be a violation of this section.

Administrative fine.

(a) Grounds for Fine. A fine may be imposed upon findings made by the Director of the Environmental Health Division, or his or her designee, that any retail establishment has provided a single-use carry-out bag to a customer in violation of this Chapter.

(b) Amount of Fine. Upon findings made under subsection (a), the retail establishment shall be subject to an administrative fine as follows:

(1) A fine not exceeding one hundred dollars (\$100.00) for a first violation;

(2) A fine not exceeding two hundred dollars (\$200.00) for a second violation;

(3) A fine not exceeding five hundred dollars (\$500) for the third and subsequent violations;

(4) Each day that a retail establishment has provided single-use carry-out bags to a customer constitutes a separate violation.

(c) Fine Procedures. Notice of the fine shall be served on the retail establishment. The notice shall contain an advisement of the right to request a hearing before the Director of the Environmental Health Division or his or her designee contesting the imposition of the fine. The grounds for the contest shall be that the retail establishment did not provide a single-use carry-out bag to any customer. Said hearing must be requested within ten days of the date appearing on the notice of the fine. The decision of the Director of the Environmental Health Division shall be based upon a finding that the above listed ground for a contest has been met and shall be a final administrative order, with no administrative right of appeal.

(d) Failure to Pay Fine. If said fine is not paid within 30 days from the date appearing on the notice of the fine or of the notice of determination of the Director of the Environmental Health Division or his or her designee after the hearing, the fine shall be referred to a collection agency.

Severability.

If any provision of this chapter or the application of such provision to any person or in any circumstances shall be held invalid, the remainder of this chapter, or the application of such provision to person or in circumstances other than those as to which it is held invalid, shall not be affected thereby.

Enforcement of this chapter when adopted.

The Environmental Health Division is hereby directed to enforce Chapter 4.114 of Title 4 within an incorporated area of the County of San Mateo if the governing body of that incorporated area does each of the following:

(a) Adopts, and makes part of its municipal code:

(1) Chapter 4.114 of Title 4 in its entirety by reference; or

(2) An ordinance that contains each of the provisions of Chapter 4.114 of Title 4

(b) Authorizes, by ordinance or resolution, the Environmental Health Division to enforce the municipal code adopted pursuant to subsection (a) of this section, such authorization to include, without limitation, the authority to hold hearings and issue administrative fines within the incorporated area of the public entity.
